Don't even ask the following, I can't say right now:

What is it?
When will it be released?
When can you tell us more?
How much will it cost?

2. Uniden Announces BCD396XT and BC346XT Handheld Scanners

Yahoo group: BCD396XT (2008 — 2010)

UNIDEN UPDATES HANDHELD TRUNK TRACKER® SCANNER LINEUP

Raises the Bar for Features and Performance

Fort Worth, Texas, September 29, 2008 ☐ Uniden America Corporation, a leading manufacturer of wireless consumer electronics, today announced their handheld Trunk Tracker III and Trunk Tracker IV scanner lineup to be debuted in early 2009. "Uniden is making major advances in the category it created" said Paul Opitz, Uniden's Product Manager for the category. "We've listened to our customers and taken these scanners to the next level of functionality and performance based on what they told us they needed to do their jobs better."

The BC346XT will replace the BC246T as Uniden's flagship handheld analog Trunk Tracker. Touting 9,000 channels organized using Uniden's own Dynamic Memory model the BC346XT simplifies scanner programming by modeling the scanner's memory organization after the real world. The BC346XT also adds GPS support for automatic control of radio features based on location, a first in the industry for a handheld scanner, and a feature Uniden pioneered with the last generation of mobile scanners. Additional features include:

§ Trunk Tracker III ☐ follows trunked traffic on Motorola, LTR, and EDACS systems (including EDACS systems using ESK)

§ 500 TGID Channels per trunked system ☐ doubling the number of channels that can be programmed into a trunked system

§ Temporary Lockout ☐ allows a channel or system to be locked out for a single session and restored by cycling power

§ 100 System/Site Quick Key's ☐ provides a way to quickly turn on or off scanning for groups of systems a feature that provides users of Uniden scanners the most flexibility in programming and operation

§ Startup Configuration Keys ☐ lets specific systems be locked or unlocked automatically when the scanner is powered on

§ System/Channel Number Tagging ☐ makes it easy to jump to a specific channel

§ Multisite Systems ☐ includes support for large systems such as those being installed for statewide operation in some areas.

§ Priority ID Scan -- lets the scanner apply priority to channels as they become active on the system

§ Preemptive Priority (Motorola only) ☐ monitors for priority traffic, even when the scanner is receiving a transmission on the system.

§ Assignable Search Keys ☐ give quick access to favorite search modes

§ IF Exchange ☐ lets the scanner use an alternate IF (intermediate frequency) to help avoid interference sources.

§ Negative dropout delays ☐ resume scanning after the selected time to keep the scanner from hanging on stuck mics or other continuous transmissions

§ Close Call® Temporary Store ☐ buffers the most recent Close Call hits and scans them conventionally

§ Location-Based Scanning ☐ when a compatible GPS unit is connected, turns on and off systems, sites, and channel groups as the location changes

§ Location Alert Systems ☐ allow location-specific alerts to be programmed for such things as dangerous intersections, dangerous roads, or general points of interest

§ Band Scope ☐ gives a rapid graphical display of the strength of signals within a specified range of frequencies

§ Key Safe Mode -- prevents naïve users from accidentally changing programming a feature that has been a big request from public safety and media radio system managers

§ Private Systems -- prevents a system from being modified or read by PC, to help protect confidential radio system programming

§ Control Channel Data Output ☐ allows the analysis of control channel data without the need to perform invasive modifications to the scanner

§ Volume Offset ☐ lets individual channels be programmed with a volume offset to help balance between channels that are louder or softer than other programmed channels

§ EDACS ESK Tracking ☐ tracks systems that have implemented EDACS System Keys

§ Fire Tone-Out Tone Search ☐ identifies tones used by agencies using two-tone paging for alert signaling

The BCD396XT will provide the same enhancements to Uniden's Trunk Tracker IV flagship handheld platform. In addition, this new model adds:

§ Trunk Tracker IV ☐ follows trunked traffic on APCO 25, Motorola, LTR, and EDACS systems (including EDACS systems using ESK)

§ 25,000 total channels

§ NAC Decoding ☐ allows specific agencies to be monitored on P25 conventional channels

§ P25 One-Channel Trunking ☐ supports P25 conventional systems that include both NAC and TGID access control on a single frequency

§ Automatic P25 Threshold ☐ fully automates the optimization of P25 reception

§ Multicolor Display Backlight ☐ allows the selection of backlight color to meet the user's own aesthetic taste

§ Visual Alert Notification ☐ lets alerts be assigned to specific display colors, flash patterns, audible tones, and volume levels.

Both models are expected to be released in early 2009 at prices comparable to the models being replaced.

* These models are still under development, so all features are subject to modification or removal based on actual development and testing results. No statement in this press release should be considered as a promise to deliver or guarantee of performance.

Topic: 3 Message: 4

One thing I think I would like more than anything else in a trunk tracking scanner is the ability to properly handle talkgroup patches on Motorola trunked systems. What I mean is, when TG A and TG B are patched together, I want to be able to hear the traffic regardless of whether I'm sitting on TG A or TG B. Currently the talkgroup that "gets the traffic" is dependent upon the order in which the dispatcher patches them. Any chance of ever getting this feature in a trunktracker? :)

Topic: 3 Message: 5

I would add a strong "second" to this recommendation.

I have to listen to lots of unwanted 10-27/10-28/10-29 queries on the INFO channel just in case it gets chosen for sending HOT traffic .. which it frequently does, because at MCSO in Phoenix, it's the INFO operator who multi-selects all the other channels and broadcasts the alert for the hot call ..

Close call Do Not Disturb...
EDACS ESK..

thats about it
(No NAC, or temp lockout) too bad those will be nice features on the
396XT.

Firmware should be out tomorrow or Wednesday.

Any other questions in regards to the BCD396T try the 396T group at
http://groups.yahoo.com/group/BCD396T/

Well I have to give Uniden credit. They've created a lot of hype over this product upgrade however I can't help but feel it is a lot of sizzle but no flame.

The increased channel capacity (specificaly, increased talkgroups per system) and the temporary lockout features are VERY welcome, however they alone (and combined with the other features that should have been there since day one) is not compelling enough to buy a new radio.

If Uniden wanted to impress or at the very least, make an upgrade more attractive, is have a "buy back" program where you could get the new radio for say $200 with the trade in of your old 396. I'd certainly go for that, as I'm sure a lot of others would too.

But at the end of the day, these features don't make the 396 any more attractive than the GRE offerings (which are still more appealing if they didn't look so damn ugly!!).

I can't imagine the expectation is for every 396T owner to run out and buy a 396XT... But it is a nice update to a VERY good scanner, and keeps it at the top of the feature line for a while yet.

Marketing is where its at.
Create buzz, get people talking about it. Which they did.

I agree the GRE's are ugly, and large (the PSR-500 is almost double the size).

I know I am looking forward to it. I don't have a digital yet so I
can't listen to bordering New Hampshire. I will be saving my nickles
and buying one when it comes out. The big seller for me on Uniden is
the size, as well as System and Group Quick Keys. I do wish however,
that there were more than 9 Group Quick Keys with the large increase
in memory.

$200 for your 396? Just sell the thing for more than that, and put the
funds toward the XT.

Personally, I think more than four times the channel capacity, temporary
lockout, NAC, FTO decode, multi-color backlight, and GPS support is a
pretty good 'flame'.

Granted, not as much as DMA, but you can't have such a groundbreaking
feature every release.

What else do you think should be on the XT?

How about patch support? How about trunking based on System ID? How about making it not suck for intermod? How about having a speaker that doesn't sound like a POS cell phone?

They need to concentrate on features that make the radio useable, rather than look pretty.

The 'new' features they are offering now are things that should have been there from day one. The only reason they are there now is because of the GRE offering.

I'm not trying to bash the 396 offering as I own one and wouldn't trade it for anything...but they seriously need to wake up and smell the technology or else get left behind.

Threaded...

Mike Iszak wrote:
> How about patch support?

Can you give details? Patches are receivable on the current models.

> How about trunking based on System ID?

That would be nice, but I've never heard that it's a big problem except
during band openings. (when you hear other control channels on the local
system's alternate CC frequencies)

> How about making it not suck for intermod?

Uniden has never been known for that - especially compared to the
competition.

> How about having a speaker that doesn't sound like a POS cell phone?

That would require an increase in the size of the unit. I like the fact
that it can fit in my shirt pocket and my audio doesn't sound anything
close to any cellphone I've ever heard. Maybe you have a bad speaker.

> They need to concentrate on features that make the radio useable, rather than look
pretty.

Every single feature announced makes it more usable - especially the
increased channel capacity - more than 4 times the current model!

> The 'new' features they are offering now are things that should have been there from day
one. The only reason they are there now is because of the GRE offering.

There's an assumption I'm not going to address. I think they have always
increased the feature set - regardless of what the competition does.

You can ALWAYS trash a unit for not having every possible feature in
earlier models. But, if they released a 'perfect scanner', they would be
out of business in 5 years because they would have no work left to do.

> I'm not trying to bash the 396 offering as I own one and wouldn't trade it for
anything...but they seriously need to wake up and smell the technology or else get left
behind.

And again, what other than the few features you mentioned are missing?
What could have been added yet keep the price in line with the current
market?

I understand about them...I was one of the open beta testers. I'm talking about perhaps a future firmware update to add some of the new features.

I personally have NO problem if something to add those features was a for pay update. From my perspective...I'd have no problem paying $50 for such an update....others mileage WILL vary.

Humm...I believe the Exchange IF feature is to help with intermod. I believe Paul said (but maybe not here) that the new unit will have better audio due to new speaker and grill on the front. Patched channels...I can hear them now, at least EDACS patched channels.

Are you talking about upgrading the BCD396T? This is the XT list. Any discussions on the 396T should be on the 396T list.

Perhaps "intermod" was a bad choice of words. Front end overload would be better. No IF shift will ever prevent this from happening. My 396 (and every other scanner) chokes big time whenever I use it in a downtown area or near a cellphone site.

There's really nothing that can be done about that unless Uniden wants to get serious and put a decent front end into these suckers.

It does have global ATT, now, which does a pretty good job of knocking down overload. Since there is a global setting (F+long press ATT), you don't have to mess around with ATT'ing every channel as it comes up...you can quickly turn it on and off when you go to those high RF areas.

22. BCD396XT HandheldScanner - description please

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-09-29 23:04:51 UTC
From: kayi4cle
Topic: 2 Message: 22

So, what does it look like? If you don't have a photo of it yet, could you please compare it's size to the current 396 (or 246, or whatever). Also, what color is the outside and is there a choice of colors? If I understand what I'm reading, the display is no longer the (for some) hard-to-see blue. Is that correct? And is it SMA? Thanks!

I love the GPS feature on a handheld but I am disappointed that the GPS wasn't integrated.

I would have willingly paid $600 and sacrificed a reasonable increase in size for a handheld I could mount on my dash and not have to deal with all the wires my Garmin GPS 18 adds.

Any chance there will be a 396XT powered, "snap on GPS" that could be added to the 396XT's back side?

26. Hello everyone

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-09-30 01:27:53 UTC
From: billgs13
Topic: 26 Message: 26

Hi name here is Bill and I am in central Ohio. I just found out about new 396XT and found this group. Looks like it will be a good one! But I wonder if this new 396 will cook it's own batteries! I hope they fix that flaw and the new 396.

27. Multi-site functionality

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-09-30 01:46:29 UTC
From: jad270
Topic: 27 Message: 27

There was quite a bit of debate on the 396 forum when it first came out regarding the ability to hold on a talkgroup that site (zone) hops as the transmitting radio travels through the coverage area and re-affiliates with different sites within the radio system. It would be nice to be able to stop on a particular talkgroup and let the radio scan all receivable control channels within a system while holding to find or track the talkgroup. It's a pain to be listening to a conversation that disappears because the conversation has moved to a different site, control, and voice channel. Just thought I'd bring it up again, as last time (Feb/Mar 2005) it was too late in the 396's development cycle and here we are again on the doorstep of another generation of scanner development.

Date: 2008-10-01 20:43:20 UTC
From: scannerland780
Topic: 30 Message: 30

I love my 396 and 996 but I would like a little more of a good feature. I would like to see 20 custom search ranges instead of 10.
Now I have:
VHF HI Search
800SMR Control channel only
FED VHF LO FM
FED VHF LO AM
FED VHF HI FM
MIL AIR
MIL TRUNK 380-400 CC only mode
VHF HI TRUNK
UHF 450
UHF FED CC

I would also like to add additional ones that I can zero in on bands where I know what I am looking for like:
FED UHF conventional
HAM 2M only search
900Mhz ham band
1240Mhz ham band
T Band search
700mhz (eventually)

Currently I have to change it up depending on where I travel but I would like to be able to have them all available all the time. I know it is needy but it sure would be nice! :)
Thanks for the good work Paul! Keep it up!

31. RE: [BCD396XT] "Handling" Talkgroup Patches

Topic: 3 Message: 31

Well, I'm pretty sure I was wrong about how this works with the latest firmware versions (for 996 at least.still waiting to confirm with XT). It *used to* be that way, but Paul says he thinks it was fixed, and I'm inclined to agree.

At least for multi-select, I heard a hot call being broadcast with the voice of the INFO operator, but I *did not* have INFO selected, and I heard the hot call on one of the main talk groups, which I *did* have selected. That's exactly the behavior I want.

Note that I'm talking about multi-select broadcasts. I'm not 100% certain how it works on patched channels. It's not something we do with regularity on the Maricopa P16. Phoenix does it a lot on their P25 -- I'll have to pay attention when I'm in range tomorrow.

What, specifically, do you see/hear Mike?

Subject: RE: [BCD396XT] "Handling" Talkgroup Patches

I would add a strong "second" to this recommendation.

I have to listen to lots of unwanted 10-27/10-28/10-29 queries on the INFO channel just in case it gets chosen for sending HOT traffic .. which it frequently does, because at MCSO in Phoenix, it's the INFO operator who multi-selects all the other channels and broadcasts the alert for the hot call ..

Subject: [BCD396XT] "Handling" Talkgroup Patches

One thing I think I would like more than anything else in a trunk tracking scanner is the ability to properly handle talkgroup patches on Motorola trunked systems. What I mean is, when TG A and TG B are patched together, I want to be able to hear the traffic regardless of whether I'm sitting on TG A or TG B. Currently the talkgroup that "gets the traffic" is dependent upon the order in which the dispatcher patches them. Any chance of ever getting this feature in a trunktracker? :)

I have to listen to lots of unwanted 10-27/10-28/10-29 queries on the
INFO
channel just in case it gets chosen for sending HOT traffic .. which it
frequently does, because at MCSO in Phoenix, it's the INFO operator who
multi-selects all the other channels and broadcasts the alert for the
hot call
..

Subject: [BCD396XT] "Handling" Talkgroup Patches

One thing I think I would like more than anything else in a trunk
tracking scanner is the ability to properly handle talkgroup patches on
Motorola trunked systems. What I mean is, when TG A and TG B are
patched together, I want to be able to hear the traffic regardless of
whether I'm sitting on TG A or TG B. Currently the talkgroup that "gets
the traffic" is dependent upon the order in which the dispatcher patches
them. Any chance of ever getting this feature in a trunktracker? :)

41. Future feature?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-10-04 13:07:26 UTC
From: Clayton
Topic: 35 Message: 41

A feature I would like to see added to current or future models is a "system delay". Where I live (KCMO area), the Highway Patrol and the local sheriff both use split frequencies, with the dispatcher on 1 frequency and cars responding on a different freq. Obviously a delay on the freq does no good, but if there was an adjustable-length delay that could be set per system, it would allow the scanner to stay on that system, scan the channels (or TG's) and increase the odds of hearing the reply. We also have an LTR system in the area that assigned each unit a different talkgroup, so it would help when listening to them.

The memory architecture of the DMA scanners seem ideally suited to do this, as it already has "system properties". The system "hold time" does very little good for the above issue: if the dispatcher talks equal or above the hold time, you miss the reply. In addition increasing "hold time" really slows down scanning.

Keep up the great products Uniden. Now I'm waiting for the mobile version with 25,000 channels, too. :)

Clayton

You might want to read up on the HOLD TIME feature. It's not exactly what you want, but it's close. It's been on Uniden scanners for several years.

As I mentioned in my original post, the hold time does little to help. Besides slowing the overall scanning down by holding on the system for the selected period of time, whether there is activity or not, when someone is talking it counts down the time and if they talk as long as the hold time, it will move on to the next system when their transmission is done. Also, it will not allow you to hear an extended exchange. When the 246 came out, I thought the hold time was going to be just the ticket, but alas it wasn't. My current work around is to hit the function knob on the 996 or bct15 as it will hold on the system for a couple of seconds, but an automatic solution would be ideal. If you are familiar with Probe, it has a 'tac scan' feature which does this, and it works great, but only with an Opto equipped scanner & PC.

Thanks for the suggestion,
Clayton

First, I didn't see that you tried the HOLD TIME. (again, OOOPS! :-])

Second, if you hold the Function button for a few seconds until the
scanner beeps, the scanner will lock on that system until you release it
(not just a few seconds).

You could also duplicate that system and assign it various SQKs so it is
scanned more often (assign it 1, 11, 21, 31, 41, 51, etc).

Something I haven't seen asked.
The XT can have analog/digital/both channels. Does that mean it will
respond to, and you can set, a CTS/DCS and a NAC on the same frequency?

Yes. You'd enter it as two channels...one analog w/CTCSS/DCS and the other digital/NAC.

Paul,

I noticed that the BCD396XT, has starting range of 763.0 instead of the
764.0 with the BCD396T is this correct? If so may I ask why the difference?

http://wiki.radioreference.com/index.php/BCD396XT

Frequency Coverage

* 25.0000 - 512.0000 MHz

* 763.0000 - 775.9875 MHz

* 793.0000 - 823.9875 MHz

* 849.0125 - 868.9875 MHz

* 894.0125 - 960.0000 MHz

* 1240.0000 - 1300.0000 MHz

http://wiki.radioreference.com/index.php/BCD396T#Specifications

* (North American Model BCD396T)

* 25.0000 - 512.0000 MHz

* 764.0000 - 775.9875 MHz

* 794.0000 - 823.9875 MHz

* 849.0125 - 868.9875 MHz

* 894.0125 - 956.0000 MHz

* 1240.0000 - 1300.0000 MHz

The 996 has the 'both' feature. It means CSQ, not PL/DPL/NAC.

There aren't that many mixed analog/digital channels that would be a
problem programming both as separate channels.

Date: 2008-10-09 18:04:35 UTC
From: Brian
Topic: 48 Message: 55

OK. I worked overnight and don't think I am fully awake so please bear with me. Does this mean the 396T will be fully within the appropriate range to receive all 700Mhz frequencies allocated to public safety?.....

The 396's FCC equipment authorization grant does not include those frequencies.

If anything, this would be more like the BC296D - an upgraded model of an existing scanner (in this case, an upgrade of the BCD396T as the 296 was an upgrade of the BC250D).

I agree with Joe if anything its like the 296D

The 250D -> turned into the 296 (same basic form factor with new features)
The 396T -> turned into the 396XT (added features)

The wiki for this radio does mention "Multi-Site support":
http://wiki.radioreference.com/index.php/BCD396XT
And I also seen something about it on the official press realease.

Maybe Paul O. can elaborate a little more on how it works and such and
if it virtually works like how we have it already on the GRE
PSR-500/600.

Yeah I wonder. Thanks for responding JETorres. Thought know one cared at this point. Where is Mike from Kansas that also had the same problem? I have this issue with CT State Police. If you live on the troop borders you will see this come up. Old Lyme PD is part of Troop F but borders Troop E. If the police move into the eastern part of town, they suddenly jump onto different voice and control channels. I only discovered this by pressing scan continuously once the conversation I was listening to suddenly went dead then realized that I could pick them up on a different zone.

I would also like a hint at how the mutli-site would work. Is it a "first lock" operation, or would it listen on all sites that a programmed into the radio.

I can think of three great examples where the latter would be nice to have. OK. There's really 4, but the one example is very local to me. Ohio's MARCS, Indiana's SAFE-T net, and South Carolina's SCANA all essentially work the same way. You really have to be listening to multiple sites some times to be able to hold a conversation.

I'm currently within scanning distance to at least two MARCS towers. It would be nice to have both towers in one system and scan them both.

Paul, can you throw us a bone on this one?

Thanks,
Frank

Topic: 27 Message: 65

SAFET shouldn't be an issue, if a unit has been logged onto a particular tower and changes towers it will still come across the first tower and vice versa. Units that have not registered with a particular tower though will not be heard. ie: if that radio has transmitted through that tower it will be able to be heard through even when on a another nearby tower. Of course if you don't have the TG ID in the list (and unlocked) when on ID scan you'll still hear it. Same if your in ID Search except the ID doesn't need to be in the list. Thats how the 996 works. The difference is you'll be able to have more ID in the lists with the new 396XT as well as all the tower sites according to the wiki specs.

SAFET is nice in the fact you can hear units through towers other the one they are using. I listen to a number of departments well outside the normal range of the tower sites I'm actually monitoring. I hear Batholomew Co. Sheriff through the Fairland tower in Shelby Co. and Bartholomew Co is 50 miles away, or like tonight I'm in Rushville, Rush Co. and listening to everything going on in ISP Dist. 51 (Indy) through both the Fairland and Rush Co tower sites on the 996 in the car sitting in a school parking lot. Yup, Fairland tower was coming through strong all the way in Rush Co 35-40 miles away.

Anyway, the multisite will be nice in the 396 package, and if it's like the 996 it will work great.

John

I replied from my phone last night and didn't realize it had not loaded all of Joe's message...I just got to read all of it.

If you hold on a TGID, it will only watch the current site, not others. If it was set up to look for the ID on other sites, you would more often than not miss most traffic. Each site would require a significant part of a second to tune and receive existing channel activity. So, if it were to say have 5 sites to check, on average you'd enter every comm on the channel about 2.5 seconds late.

The most likely place for a comm to resume is on the site it was last on. Having it hold the current site will maintain reception of the TGID in the vast majority of instances.

You could try this yourself by putting a TGID that is only active on one site in a channel group by itself, enabling only that channel group, then having it scan multiple receivable sites.

The O/M and Complete Reference are currently being reviewed by our QA group. Once they sign off on them, I'll make them available. Note that the Complete Reference will be a pdf document...the O/M itself is HTML based (actually mediawiki-based), and we will add details / clarifications / hints and tips as they are needed.

Joe,

Can you possibly describe for us lay-people how multi-site works on the GRE units and how it apparently will differ on the BDC396XT? I guess I don't fully understand the GRE workings.

Thanks

In short the 600 uses one scan list for all the sites in a multisite system.
But you can also use more than one scan list for a site and vice versa.
Basically you can enter something once but use it multiple times

John

Basically and the definition I'm using for "Multi-Site" is:

Pausing on a trunked system talkgroup and have the scanner track the TG across all the programmed control channels for the system.

This is useful when tracking "roaming" users on a system since there's no way to know which site they might be affiliated to at any given time. If you stick to one control channel only and the user has since moved on to a different site, you'll miss his subsequent transmissions. The latest GRE models offer this feature. From Paul O.'s earlier response, the Uniden models including the upcoming BCD396XT do not have this feature.

73. BCD396XT POCSAG/FLEX decoding??

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-10-28 08:47:35 UTC
From: bigfella237
Topic: 73 Message: 73

I think I requested this before the 396T was released (and if I didn't I certainly meant to); is there any prospect of software based POCSAG/FLEX decoding being integrated into a hand-held scanner?

At the moment I carry two separate pagers (from two separate agencies on two separate frequencies) as well as my 396T and various big-M portables and I would love to be able to leave the pagers in the glovebox, scan the appropriate freqs with the 396XT and have the messages display on the screen with an alert tone?

Systems could be set up as "Pager" systems in much the same way as you specify a trunk system, freqs set up as sites and CapCodes could be entered similarly to TGID's in their own groups with alpha tags?

And of course we would need to be able to choose between "CapCode Scan" and "CapCode Search" as well!

I could be mistaken as I've never had the need (and once again it's getting a little off-topic for this group) but doesn't the ARC software allow you to re-program the pre-programmed searches? That would give you the extra search ranges you need?

The preprogrammed searches (Aircraft, Public Safety, Marine, Railroad, etc) are all fixed in the scanner's ROM and are not editable.

Other reasons aside, it is illegal to monitor paging frequencies in the
USA per the ECPA. The FCC would likely not approve the Type Acceptance.

77. Specific Frequency Coverage

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-10-28 21:42:36 UTC
From: Ryan
Topic: 77 Message: 77

Does anyone have a more specific frequency coverage list than is listed on the wiki page? I read from Upman on a forum where he stated that the 396XT wouldn't support Mil Air (something I've never been able to listened to, but have always wanted). The radioreference wiki page suggests this range would be covered.

78. Re: Specific Frequency Coverage

The wiki page is as specific as it gets.

You are either recalling a post from the BC346XT board or a post on RadioReference that was in regards to the BC346XT.

I was refering to this post:
<http://www.radioreference.com/forums/showthread.php?p=894688#post894688>

However, I now see I was wrong. It is the 346XT that Upman was
refering to that will not do mil-air, not the 396XT. I imagine that
the frequency coverage will be very similar to the existing 396XT.
Certainly we aren't getting LESS frequency coverage, right?

80. Volume Offset

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-10-31 03:11:03 UTC
From: kb1nvi
Topic: 80 Message: 80

While vulome offset will certainly be a useful feature, it doesn't seem like it would help with the problem of analog systems with radios using audio compression. The Radio Reference Wiki states that the the 346XT, 996T, 396T, and 396XT all have ANALOG AGC. Is this correct? If so, does this fix the problem of low audio even with the volume turned way up on analog systems using audio compression? This has become a real problem in my area so if the Analog AGC mentioned in the RR Wiki is not correct, is there any solution on the horizon?

I can't speak for the other receivers but I have tried with Analogue AGC both on and off on my 396T and 996T's and it seems to make very little (if any) difference to those dispatchers and their droopy boom Mic's? You crank up the volume so you can hear them and the next mobile unit that TX's blows out your eardrums!

AGC is NOT AVC

Audio AGC, while it attempts to adjust for varying levels of audio, by it's very nature, can't flatten everything out so it is all the same level. Besides getting pumping, you'll also get horrendous bursts of static as it pumps up the volume on quiet transmissions and shuts it down on louder transmissions.

It can only analyze and adjust for averages....consider what would happen if every pause between words was detected as a 'quiet' audio portion and the volume was turned up...then 1/2 a second later, when the next word starts.....the detection was "loud" audio and turned the volume down.

It's the nature of the beast....some sounds, systems, individual radios will be louder or softer than others. Audio AGC (or AVC if a true AVC circuit is in there) does the best it can, but it's based on averages, not instants in time.

I guess my question for Paul etc is that it doesn't seem like I run into the volume issue when using a commercial radio presumably because they are able to uncompress the compressed audio. So what is it the prevents Uniden etc from doing the same thing? Is it a cost issue?

88. New Feature Request: Temporary [Hold]

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-11-06 06:19:09 UTC
From: bigfella237
Topic: 88 Message: 88

Just a thought but would it be possible to have a "Temporary Hold" feature simular to temporary lockout except on a timer?

Quite often when scanning I will run across an interesting conversation and reach for the [HOLD] button to listen, then 10 or 15 minutes later I start wondering why it's so quiet and discover I'd forgotten to recommence scanning.

The feature could operate as temporary lockout does, with a quick press of the [HOLD] key initiating a hold timer (the length of which could be user-set) and two quick presses inducing the current semi-permanent hold?

Delay has no way to know if you want to hold on the channel or not, so I agree it would be a nice feature to have. It could be a SETTINGS selection if the HOLD is normal or temporary (as I don't know how else you would assign it)

I think it would be a great feature. Way to many times do I do the same thing as yourself, hit the hold and a while later it dawns on me that my scanner is really quiet, and it is because I was holding a frequency.

Yes, that would be a nice feature. I vote for it too.

From: scorpionutv
Topic: 96 Message: 96

As per the product announcement:

"Control Channel Data Output ☐ allows the analysis of control channel data without the need to perform invasive modifications to the scanner"

Am I to understand that this feature will essentially allow the user to choose between having discriminator audio or filtered audio at the headphone jack? Obviously if this is the case, it is not limited to listening to control channels only, or so I would presume...or have I completely missed the boat on this one?

Jeremy

I bet this will be like the GRE counterpart where the data is available at the programming jack, and not the earphone jack.

I like your idea of being able to choose the audio. The only problem with it is that you will no doubt have people using discriminator audio and earphones which could damage your hearing and result in a huge money lawsuit, so I doubt Uniden would do it.

Filtered Control Channel Data Output (like is in GRE) - uselessness feature IMHO. It would be much better unfiltered discriminator output signal.

I wish to use Uniden for trunk monitoring by using third-party software (like is UniTrunker, T4Win, TrunkView & etc.) because it more functional and more flexible. Now for this purpose I should climb into Uniden with a soldering iron :(

The only difference is where it is sliced - in the scanner or in the PC.
Why not just use a program that *does* support control channel data like
PRO96COM (which is like "UniTrunker, T4Win, TrunkView & etc.").

The output on the 396XT is ASCII data...it can be read by HyperTerm without any further electronics required. Of course you need a program.

How?

We tried few trunk decoders with GRE and no luck with filtered output.
But home made Discriminator Tap works just fine!

It such one. I use different software decoders. Then PRO96COM supports Motorola Type I/II Trunking? EDACS? EDACS ESK? MPT1327? Any other digital converstions like is paging & etc.?

As far as I know, no! What else questions?

Motorola and EDACS would be supported by the scanner, I imagine. It does not support MPT1327 (of which there is VERY little in the USA), and paging decoding is illegal in the USA.

I think PRO96COM only supports Motorola at this time.

Turning your argument around, why is it that Unitrunker, T4Win and Trunkview do not support raw data? It's one less thing the program would have to do, and should be trivial to add.

You hook up the cable to your GRE, turn on the CCDump feature on the radio and the settings needed on UniTrunker are right on the website where you download it. UniTrunker even has a menu where the GRE model is selected.

www.unitrunker.com

My understanding is that on the GRE models, you have to put the scanner into this mode by holding some obscure combination of keys at power on. I guess this would also work for Uniden if they chose to provide baseband audio at the headphone jack as an option for those who want to hook it up directly to a data slicer.

Anyway, I appreciate all of the speculatory responses, but I was kind of looking for an official response from Paul or someone else who knows the details of this feature for certain.

Topic: 88 Message: 108

Good idea. I like the possibility of pressing hold once and it holds for say one minute. Press hold twice in quick succession and it holds for 5 or 10 minutes. Three quick presses would induce the semi-permanent hold. Having the lockout do the same would be nice. With modern processors it wouldn't be hard to have a menu choice to set those times to user-defined time periods.

Subject: [BCD396XT] New Feature Request: Temporary [Hold]

Just a thought but would it be possible to have a "Temporary Hold" feature simular to temporary lockout except on a timer?

Quite often when scanning I will run across an interesting conversation and reach for the [HOLD] button to listen, then 10 or 15 minutes later I start wondering why it's so quiet and discover I'd forgotten to recommence scanning.

The feature could operate as temporary lockout does, with a quick press of the [HOLD] key initiating a hold timer (the length of which could be user-set) and two quick presses inducing the current semi-permanent hold?

Hi Paul,
I was wondering if this scanner would receive the Hamilton County/Cincinnati TRS better than the 396t? I don't really know what the difference is with this system as to others, according to R.R., it is a Motorola APCO-25 Common Air Interface Exclusive. I don't know if this is the same as a multi-site system, but the transmissions often get garbled and sometimes missed totally. Most of the time they start out clear and then get garbled as the transmission goes on, Both when the dispatchers are transmitting and the cars. Thanks - Tony

I'll instigate with the "instigator". I'm not Paul, but I'm thinking not a whole lot has changed between the 396 (M&M plain), and 396XLT (Peanut) as far as the receiver goes, because the radio is in the same "size" package. If you are in an area that has good signal, you use a good antenna other than the stock duck, do not have offending signals in a nearby bandwidth, and atmospheric conditions a good, then the P25 reception should be fine on the 396 when closest to the tower of interest. But that's just a guess as far as the XLT goes.

Paul,

As an add on to the previous question: Will the firmware be the same as the current 3.01 on the 396 or will it be a totally new and improved "beta tested" firmware? I think this is a very important and relevant question prior to the release of this expanded version of the 396. Thanks in advance!

You'll see part of this reply twice (I hit send too soon).

The new model will share a lot of core code with v3.01, but will, of course, be changed in order to accomodate the new feature set as well as the changes in hardware architecture.

By the time the scanner is for sale, we'll have about 30-40 man months of beta testing behind us.

While the firmware will certainly share some core code, it will be somewhat different in order to accomodate the new features and changes to the hardware architecture.

I appreciate the response, but there is something different about these two systems. As far as I know, everyone still has issues with them whether they are using GRE or Bearcat. They are two separate systems that communicate with one another. I figured Paul might be familiar with them. Thanks - Tony

>
> I'll instigate with the "instigator". I'm not Paul, but I'm thinking not a whole lot has changed between the 396 (M&M plain), and 396XLT (Peanut) as far as the receiver goes, because the radio is in the same "size" package. If you are in an area that has good signal, you use a good antenna other than the stock duck, do not have offending signals in a nearby bandwidth, and atmospheric conditions a good, then the P25 reception should be fine on the 396 when closest to the tower of interest. But that's just a guess as far as the XLT goes.

Paul,

Any chance you could describe in a little more detain what you mean by "changes to the hardware architecture?"

I keep thinking things like "multi-site" and "GPS" that were in the 996 are more firmware core code but would like to know more about the hardware changes.

Thanks

If I remember correctly from other conversations among other things it has a different CPU with more memory as well as other new hardware to allow for FTO and other new functions like the GPS. All of these changes require redesign of the main circuit board or adding new boards.

John

One thing I can think of is the multi-color backlight. The current model cannot physically do that. Also, I doubt there is a ton of extra memory in the current unit let alone enough to quadruple the size. Those would require hardware changes.

Following the product release pattern of the 396 and 996, can we logically deduce that once the portable platform (BCD396XT) becomes available, there will be a BCD996XT to follow with the same/similar improvements over the 996?

If it sells, I'm sure.

Since the code-base will be new, they can use the feedback (and don't
we all give feedback!) will let them fine-tune the code for the mobile
unit.

I checked with Paul on the release date and he assured me that it's
one month earlier than it was one month ago - progress! :-)

Paul...

Can you briefly explain how the "Control Channel Data Output" feature will work? For instance, will the scanner have data slicer capability built-in, or will this be more like a discriminator tap that could be connected to an external slicer? Will it be good for decoding anything except control channel data?

Thanks!
Jeremy

But if the firmware doesn't work with some systems.....like the Statewide P25 TRS system in Illinois then all the extras and new boards don't mean Jack to us. UPMan has already reported (read back a few messages) that the firmware will be based off the recent 3.01....which I have already extensively tested here in Illinois and it is useless....so unless I read of some very compelling difference backed up by reputable listeners in the Chicago Metro area, then the 396XT won't be coming home with me. So for those whose listening is already great, the hardware changes will be well received and make it an even greater scanner.

Uh...that's *not* what he wrote. I suggest you read it again. On 11/20
he wrote "I am happy to report that we are exactly one week closer to release
than we were on 11/13. :)" So a week later made them one week closer. Paul's
a funny guy.

<sarcasm mode on>

You must be right. The fact that they've announced the last 5 models
about 6 months ahead of time, and they made a Q3 2008 announcement that
it would be available in Q1 2009 (about 6 months later) MUST be due to
other factors. There must be something different about this '6 months',
and it must be due to all the hype about a scanner that was released
over a year ago.

OK, let me rephrase that....Uniden announced firmware updates first when the 500 came out and there was a lot of buzz going on....yet the update reports were that it was being worked on. Not ready to go...being worked on...Then a list of what was going to be in that firmware upgrade was announced.....go back and check all the Radio Reference archieves. HUGE time gap from announcement of firmware update and then the proposed release.....THEN after a less than well received upgrade, an announcement to....."Keep Looking Here" with little hints and the release plan. When the 246 and 396 were announced a full line of pictures somehow became public and that was the teaser. Several pictures of prototypes. So the activity I have observed from Uniden has been markedly different this time. GRE wasn't releasing a model if I recall when the 396 was announced. So, I still stand by my position that the promise of working on a long awaited firmware upgrade
coincidentally was announced right after the release of the 500 but the actual firmware release and all that checksum nonsense came well after that. Then after all that the "Teaser" Avatar of UPMan came out in his Radio reference posts and the announcemnt of the 396XT. You are probably correct in your observation and thank you for pointing that out, but this timeline was a little different this time around. Sorry I didn't mention the sudden firmware update announcemnt out of the blue and all the things leading up to this latest product offering.

I own more Unidens than GRE's by the way.....and they get used daily. Not a GRE spokesman.

Brian:

You are correct to say that one of the reasons we control the release of information is to keep some buzz going. It also gives me an early opportunity to gather more public input while I still have a chance to affect the final shape of the product. I'm not exactly sure what is wrong with that.

The complete product line that was leaked before the 246/396 came out was a completely unauthorized release by a dealer who should have known better and who will never have the opportunity to do so, again. To say that I was a little miffed about that would be a tremendous understatement. The info he released was in large part completely unreflective of what the product would actually be (as you say, prototype renderings of some ideas).

When the level of development reaches a point where I have something pretty solid, then we release the information. You'll see a major information release next week...information I could not have released earlier because it was still being created, reviewed, approved, etc.

I leave assessments of product performance to the community. Anything I say would be rightfully taken as completely biased. Any assessments of performance being given by members of the community right now are completely without any basis in fact or experience. But, feel free to speculate and criticize. User criticism is the biggest leverage I have when challenging engineering for resources. I would ask that such criticism be based on actual experience with the product, but I won't stop such criticism, in any case.

<sarcasm mode on>

You must be right. The fact that they've announced the last 5 models
about 6 months ahead of time, and they made a Q3 2008 announcement that
it would be available in Q1 2009 (about 6 months later) MUST be due to
other factors. There must be something different about this '6 months',
and it must be due to all the hype about a scanner that was released
over a year ago.

OK, let me rephrase that....Uniden announced firmware updates first when the 500 came out and there was a lot of buzz going on....yet the update reports were that it was being worked on. Not ready to go...being worked on...Then a list of what was going to be in that firmware upgrade was announced.....go back and check all the Radio Reference archieves. HUGE time gap from announcement of firmware update and then the proposed release.....THEN after a less than well received upgrade, an announcement to....."Keep Looking Here" with little hints and the release plan. When the 246 and 396 were announced a full line of pictures somehow became public and that was the teaser. Several pictures of prototypes. So the activity I have observed from Uniden has been markedly different this time. GRE wasn't releasing a model if I recall when the 396 was announced. So, I still stand by my position that the promise of working on a long awaited firmware upgrade coincidentally was announced right after the release of the 500 but the actual firmware release and all that checksum nonsense came well after that. Then after all that the "Teaser" Avatar of UPMan came out in his Radio reference posts and the announcemnt of the 396XT. You are probably correct in your observation and thank you for pointing that out, but this timeline was a little different this time around. Sorry I didn't mention the sudden firmware update announcemnt out of the blue and all the things leading up to this latest product offering.

I own more Unidens than GRE's by the way.....and they get used daily. Not a GRE spokesman.

Hey, at least Uniden *has* some capital!

Another factor, one UPMan didn't mention, must be the FCC cert process.

At some point, long before we can all get our sweaty paws on one, all
the details of the '396XT will be on the web ...

I don't think anyone has come up with a variable attenuator that works for a scanner. To realy be usable and truely adjustable it would have to be adjustable for each channel, not globally

Maybe it's NOT just a Uniden issue:

http://gizmodo.com/5096754/blackberry-storms-shipping-delay-blame-the-firmware

Apparently the much in demand "Blackberry Storm" is having some issues
with its own firmware.

The 'going price' for a digital scanner is $500. I think I read that the XT will be the same as the 396T, which is of course the same as the going street price.

I think it would be good to have, but, like some functions on the GRE's make
it an expert mode that only those with the knowledge of how to use it would
be able to access it.

149. 396XT -3.01 Firmware

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-11-24 00:07:55 UTC
From: dataman60435
Topic: 149 Message: 149

I agree with "Brian" (chicagostretch), here in ILL on Starcom Digital 700/800 this firmware is still not the answer to quality audio and decoding....A great scanner friend of mine just loaded the recent firmware for my GRE500 and even me being a Uniden "very good customer" have to admit the GRE audio quality and decode of Starcom is EXCELLENT...Plus, we did not need a checksum # or registration to load this firmware (1.6-1.3) which was loaded with new radio features like RadioID's and loaded the firmware in minutes...Mr. Opitz is a excellent rep for Uniden and they have made some very good featured products but ease of loading new firmware and new features needs to be re-thought about...

Paul,

Thank you for the very thorough explanation of the process. I am not a techno whiz but I have spent hours....HOURS in the field with my 396 and feel I know when it even has the slightest of issues. This confounded 700/800 Mgz trunked system in Illinois is for the birds. In the spirit of free enterprise I only had one other product to compare in side by side with and offered my results in a couple different places. Very frustrating to say the least. Those of us who really pay attention to our scanners do realize many of the problems are, in fact, system related. Multi-path is an evil to the scanner hobbyist. I don't know how we can get an engineer in the Orient to break through that multi path issue and decode as well as the "other guys". I REALLY, REALLY am salivating over what I do know about the 396XT. So, I am sure I'll be like a little kid when the Christmas catalog used to come out when I was a kid. Maybe Uniden can send an engineer or 2 to Chicago to experience this strange Starcom thing and see how it affects the 396 as it is now. I think we purchase quite a bit in the Chicago-area market. Don't we?..... Thanks again......

Brian

Subject: Re: [BCD396XT] Re: Are we any closer to knowing the release date for the 396XT?....and what about firmware?

Brian:

You are correct to say that one of the reasons we control the release of information is to keep some buzz going. It also gives me an early opportunity to gather more public input while I still have a chance to affect the final shape of the product. I'm not exactly sure what is wrong with that.

The complete product line that was leaked before the 246/396 came out was a completely unauthorized release by a dealer who should have known better and who will never have the opportunity to do so, again. To say that I was a little miffed about that would be a tremendous understatement. The info he released was in large part completely unreflective of what the product would actually be (as you say, prototype renderings of some ideas).

When the level of development reaches a point where I have something pretty solid, then we release the information. You'll see a major information release next week...information I could not have released earlier because it was still being created, reviewed, approved, etc.

I leave assessments of product performance to the community. Anything I say would be rightfully taken as completely biased. Any assessments of performance being given by members of the community right now are completely without any basis in fact or experience. But, feel free to speculate and criticize. User criticism is the biggest leverage I have when challenging engineering for resources. I would ask that such criticism be based on actual experience with the product, but I won't stop such criticism, in any case.

The current samples do not, but in the event the production models do, you can apply the IF Shift function to that frequency to throw the birdie somewhere else.

I would think so..
However maybe this new feature will help

Intermediate Frequency Exchange - changes the IF used for a selected
frequency to help avoid image and other mixer-product interference on
a frequency.

I have not finished reading the Referenced Guide but was curious if
this is configurable on a per-channel basis, or only system-wide.

Thanks.

It will apply to all instances of that frequency in the scanner or
any time the scanner tunes to that frequency in search mode.

I just read through the manual, specifically the section on trunked radio systems and holding on a single talk group. How does one monitor a roaming talk group that re-affiliates with different sites? It appears that once again it will not be possible with this latest generation of the BCD396.

I would like to see that feature plus the ability to preempt the held talk group with a priority talk group as described in the manual which makes it sound like it is possible to monitor the system priority talk groups within the control channel data.

I guess this feature can be faked by setting up a group within a system that contains just one talk group and then letting it scan all sites for one talk groups?

As previously discussed, this operation did not change. Having the scanner roam sites every time a held TG drops would ensure that you would miss 99% of all traffic on a talk group (since the most likely place for either a reply or additional traffic on the TGID would be on the current site...and evaluating, say 5 other sites would mean that the scanner would be "off somewhere else" for 5-6 seconds instead of on the site with the traffic)..

Roaming w/o missing a lot of traffic is really only possible using a two-way radio that can affiliate with a site (thus ensuring any traffic meant for it is included on that site).

As long as there is one unit from that talk group affiliated with that site, then you will hear any traffic for that talk group.

At least that's the way the Colorado DTRS multi-site system works. Let's say a State Patrol unit assigned to the western side of the state drives over to the eastern part of the state. It obviously can't remain affiliated with a site on the western side of the state...that's 100's of miles away. So it affiliates with a site on the eastern side of the state. If I happened to have the western Colorado State Patrol talk-group in my scanner (which I do...but many don't)....then as long as that unit is near a site I monitor, I'll hear ALL of the western Colorado State Patrol transmissions.

And that actually happens fairly often. I routinely hear CSP traffic that is talking about incidents that are literaly a hundred miles away from the Denver metro area, and all because one of the cars from that CSP division happens to be affiliated with a Denver site.

But yes...if NO units in that talkgroup you wish to monitor are affiliated with the site you're monitoring, then you won't hear any of that talk group's traffic.

Make sense?

We've gone over the pros and cons on this subject for several years and in different lists and forums many times before. Paul might have a valid point about missing *some* traffic *some* times. But really, you don't miss that much. In fact, you miss a lot more, if not everything, when the scanner stays on one site and the talkgroup activity moves to a different site. But like I said before and many people including the OP knows, we've gone back and forth on this subject many times and Uniden doesn't seem to want or can't implement such feature. Whether is due to patents or hardware limitations, etc., who knows....

That's not saying Uniden scanners are not great, but for that feature and several others you might have to get the competition's scanner if you really want or need such feature.

My PSR-500 does the Multi-Site thing real good and I can track a TG across half a dozen sites at any given time. It takes maybe 3-4 seconds to check them all. Seldom I might miss a word or two from a transmission but like I said, it's better than missing the whole thing because the scanner was locked on to the wrong site.

Same thing with our Trunked system in Minnesota. I would be suprised if any scanner could ever steer talkgroups to different sites. Our two way radio scan lists cannot even do that. They only steer the selected talkgroup, not the scanlist talkgroups. For example a Minneapolis squad MIGHT be able to affiliate it's main talkgroup to a tower in Northern Minnesota but the other Minneapolis talkgroups in the scanlist cannot be received unless the radio channel selector is switched to one of them. I said MIGHT above because site permissions are programmable in the radio system and in our state very few talkgroups are programmer for statewide access. IMHO the only way to monitor distant talkgroups is to improve the antenna site used by the scanner or use an Internet scanning receiver site.

I think it is due to Uniden's choice to 'cripple' their scanners. There are a few very easy to impliment features that for whatever reason haven't been included. This is one of them. Patch support is another.

How about have the scanner support neighbour lists?

As they cannot transmit (and wouldn't be recognized even if they did),
they would never be able to activate a TG on a site/zone.

It's the same issue of trying to hear a conventional signal that is out
of range. Sometimes, you simply won't be able to hear things.

This makes sense with the current 396, which does not support multi-site. I'm guessing you have each "site" programmed as a separate system.

But how will this same senerio work with the "multisite" capability proposed in the XT version?

Thanks

We are working on pdf export capabilities, but we aren't there yet (probably at least a few weeks away). Meanwhile two resources:

1) If you have access to Adobe Acrobat (the pay version, not the free reader) it has a built-in web-->pdf converter.

2) The software references linked in the wiki are 200+ pages each of operating information in pdf form.

We are working on pdf export capabilities, but we aren't there yet
(probably at least a few weeks away).. Meanwhile two resources:

1) If you have access to Adobe Acrobat (the pay version, not the free
reader) it has a built-in web-->pdf converter..

2) The software references linked in the wiki are 200+ pages each of
operating information in pdf form.

172. Re: No Multi-Site Hold Function Again?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-11-26 01:48:36 UTC
From: jad270
Topic: 158 Message: 172

Consider the fringes of control channel reception. An affiliated radio may jump to another receivable control channel if it is just out of range of its home control channel, and most certainly will as it travels through different sites. I happen to live in a fringe area between sites, so if I want to listen to my local PD for example, it's a bit of a crap shoot because in the eastern part of town their radios often times affiliate to a different site than they do if they're in the western part of town where they can receive the home control channel. The only way I know this is because I've heard a conversation go silent while holding on a talk group, but pressing scan reveals that it has moved to a different site. Short of being the operator of the radio systems I monitor, I can't speculate how they are configured (and neither can anyone else for that matter), but I can make educated guesses based on what I observe.

--- In BCD396XT@yahoogroups.com, John <old351@...> wrote:
>
> Same thing with our Trunked system in Minnesota. I would be suprised if any scanner could ever steer talkgroups to different sites. Our two way radio scan lists cannot even do that. They only steer the selected talkgroup, not the scanlist talkgroups. For example a Minneapolis squad MIGHT be able to affiliate it's main talkgroup to a tower in Northern Minnesota but the other Minneapolis talkgroups in the scanlist cannot be received unless the radio channel selector is switched to one of them. I said MIGHT above because site permissions are programmable in the radio system and in our state very few talkgroups are programmer for statewide access. IMHO the only way to monitor distant talkgroups is to improve the antenna site used by the scanner or use an Internet scanning receiver site.

Assuming you're talking about SmartZone systems, I don't believe I'm familiar with the concept of a "home control channel". Can you elaborate?

Thanks
Jeremy

Why not program two systems with the same talkgroup? When one goes quiet the other should become active. With the new scanner you should be able to do this with one system having both sites programmer in it.

Don't they have a station radio? It should stay on one zone since it doesn't move around (or should not be). As such, it will keep that TG active on that zone.

If the XT works like the 996, you should be able to program a system with both sites, and only program in the TGs like the one you described, and hold that system (hold the function button on the 996). It should still scan both sites only for that TG. End of problem.

I can only speak for our system: No, the consoles are most likely hooked up through landlines/T1 and microwave links so they don't really have to have a "home repeater". So if the unit they're talking to on a specific TG is in a far away site and is the only unit, the audio will most likely go out only on that site the unit is affiliated to.

I said station radio, not console. In my area, the units are dispatched
from the 911 center, not their station.

And what I said I also put the disclaimer that is "based" on my local system BUT now I add, that's the typical setup on many of these new digital statewide Smartzone/Omnilink systems out there.

181. Re: [BCD396XT] Re: No Multi-Site Hold Function Again?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-11-26 15:32:57 UTC
From: Don.Curtis@att.net
Topic: 158 Message: 181

Yes, I have several of the local sites programmed into my system. I also have a statewide "system" that has all the control frequencies for the entire state in it and all the CSP talkgroups. This is not "ideal" in that the 396 will lock on the first control channel it encounters and then stay on that control channel until reception is lost. It does work, in that as I drive across the state, the radio changes sites and picks up the local CSP traffic most of the time. There are sites where specific talkgroups are barred...in order to better distribute the traffic. If the 396 happens to lock on one of those control channels....I get nothing until I get out of range to that site and then the radio picks up the next control channel it hears.

No idea on the 396XT's capability. Paul (upman) from Uniden is the program manager for the 396XT and is, obviously, quite knowledgeable about how it works.

Don

-------------- Original message from "roxie2401" <twensel@...>: --------------

This makes sense with the current 396, which does not support multi-
site. I'm guessing you have each "site" programmed as a separate
system.

But how will this same senerio work with the "multisite" capability
proposed in the XT version?

Thanks

182. Re: [BCD396XT] No Multi-Site Hold Function Again?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-11-26 15:45:53 UTC
From: Don.Curtis@att.net
Topic: 158 Message: 182

Yes...in my example, the Wester State Patrol unit would have to have his radio set on the Western Division's channel(s) (talk group). If that trooper selected an Eastern Division channel (talk group) then the western talk group is no longer "affiliated" on the east side of the state.

And yes, there are some sites where specific talkgroups are barred (electronically) so the site doesn't get overloaded with too much traffic.

The way my system is programmed.....(and Colorado DTRS is used by a large number of local agencies also). I have several systems, each is a specific site and I've got talkgroups from agencies that are near that site programmed in. I also have a single system that contains all the control channels in the state and has all the CSP talk groups programmed in. The radio will only lock on the first control channel it hears, and hang on to it until it gets out of range, it then scans and finds the next control channel it can "hear" no matter if it's a weak signal or a strong signal. It's the best I can do to come up with a system that is useful statewide. If I ran the scanner in 'id scan' mode....I hear only CSP as I drive across the state. If I run it in 'id search' mode....I hear all traffic on that site...some of which may be public works, school buses, transit buses, etc.

It's better than trying to setup a ton of systems that hopefully will cover the whole state.

---------- Original message from John <old351@...>: ----------

Same thing with our Trunked system in Minnesota. I would be suprised if any scanner could ever steer talkgroups to different sites. Our two way radio scan lists cannot even do that. They only steer the selected talkgroup, not the scanlist talkgroups. For example a Minneapolis squad MIGHT be able to affiliate it's main talkgroup to a tower in Northern Minnesota but the other Minneapolis talkgroups in the scanlist cannot be received unless the radio channel selector is switched to one of them. I said MIGHT above because site permissions are programmable in the radio system and in our state very few talkgroups are programmer for statewide access. IMHO the only way to monitor distant talkgroups is to improve the antenna site used by the scanner or use an Internet scanning receiver site.

But yes...if NO units in that talkgroup you wish to monitor are affiliated with the site you're monitoring, then you won't hear any of that talk group's traffic.

Make sense?

---------- Original message from "jad270" <jad270@...>: ----------

I just read through the manual, specifically the section on trunked radio systems and holding on a single talk group. How does one monitor a roaming talk group that re-affiliates with different sites? It appears that once again it will not be possible with this latest generation of the BCD396.

I would like to see that feature plus the ability to preempt the held talk group with a priority talk group as described in the manual which makes it sound like it is possible to monitor the system priority talk groups within the control channel data.

I guess this feature can be faked by setting up a group within a system that contains just one talk group and then letting it scan all sites for one talk groups?

By home control channel I mean the one that it typically affiliates to local to me. Like I said, in theory I could create a system with all the sites programmed in with just a single talk group and that would essentially simulate holding on one talk group while scanning all receivable control channels. The obvious pain is if there is something worth stopping the scan pattern for, it'll take time to program that setup into the scanner.

Another scenario is what if you're driving across your state picking up and dropping different control channels and want to listen to one talk group? You couldn't do it given the way the 396 is designed. There are plenty of useful cases where you might want to be able to press hold on a talk group and have the option to scan all receivable control channels.

Nope...the 396 will stop and lock on the FIRST control channel it finds and stay there until you are out of range of that control channel. Remember...a control channel is always "on." so the 396 will stop scanning until it no longer gets a signal. Now if there is a unit affiliated with that site (the one your 396 is stopped on) that is "set" for the talk group you are interested in....then it works fine. But if the 396 stops on a site where no units affiliated are set to that talk group...you'll hear nothing and the 396 will NOT continue to look for other control channels.

I do a similar thing with my 396 for the State of Colorado.

Sure you can. Just copy that system and include the TGID you want to hold and use ID SCAN. You can even change the TGID if you want to do that with a different TGID.

I think most of us know how the Uniden scanners work and that's the problem. With the GRE PSR-500/600, the scanner continues checking each and every programmed control channel it currently receives. Even the older GRE generation (Pro-96/2096 would do that within a bank, although I know some will be quick to point out that it was more of a "coincidental bug" than a feature, but still....

No, it didn't. In fact, when the control channel changed as a TG was held, the scanner went into "la la land". This is a very well known fact.

But, I know you're going to have some stab at Uniden since I criticized a GRE product...

With the included PC Serial cable, so your PC's serial port.
Yes the cable will be included (its the same cable you program with etc)

Uniden has not said anything about adding Radio Id's yet. (neither confirm nor deny)

Id love to see it but who knows if it will happen.

The included cable used for programing and updated firmware appears to be the same used for the CC data, from what I have heard you use the same port as well, makes sense though since there is only one port.

Radio ID's - if using an external program you'll have the ID's

John

From: Frank Leidy
Topic: 189 Message: 192

John,

I took a look at the manual from the link UPMan posted a few days ago. I am by no means an expert on CC data. I was looking at the data for the Decoded Descriptions for Motorola systems (Page 123). I really don't see anything in the message that looks like a radio ID. There are quite a few terms on that page that I don't understand (LCN, Member ID, Patch ID). Nothing really sticks out as a radio ID.

Also, while I'm on here. I have to give kudos out to Uniden. My first look at the manual was very quick. I missed two important things: the command reference and the character set patterns.

I'm looking at building my own software. I've got a basic one written for my 396. I cheated and don't show the display. I could never figure out how to interpret some of the non-ASCII characters that the radio was showing on some lines. I knew they were things like the signal bar and such. It turns out all I had to do was match the hex that was coming back to one of these.

Thanks for giving me my missing link.

Frank

That's likely what they are calling Member ID.

Member ID is the affiliated radio ID I believe. Paul can answer that one
better than I can.
Patch ID are the two radio ID's that are patched so they are the radio ID's,
but only appear during a patch the way I read it.

I for one appreciate the pre-announcements well ahead of availability. I currently have the BCD396T and have been struggling with memory limits for the past 6 months. If it were not for the pre-announcement, I would have already switched to another brand.

>
> The complete product line that was leaked before the 246/396 came out was a completely unauthorized release by a dealer who should have known better and who will never have the opportunity to do so, again. To say that I was a little miffed about that would be a tremendous understatement. The info he released was in large part completely unreflective of what the product would actually be (as you say, prototype renderings of some ideas).
>
> When the level of development reaches a point where I have something pretty solid, then we release the information. You'll see a major information release next week...information I could not have released earlier because it was still being created, reviewed, approved, etc.
>
> I leave assessments of product performance to the community. Anything I say would be rightfully taken as completely biased. Any assessments of performance being given by members of the community right now are completely without any basis in fact or experience. But, feel free to speculate and criticize. User criticism is the biggest leverage I have when challenging engineering for resources. I would ask that such criticism be based on actual experience with the product, but I won't stop such criticism, in any case.

date for the 396XT?....and what about firmware?
>
>
> OK, let me rephrase that....Uniden announced firmware updates first
when the 500 came out and there was a lot of buzz going on....yet the
update reports were that it was being worked on. Not ready to
go...being worked on...Then a list of what was going to be in that
firmware upgrade was announced... ..go back and check all the Radio
Reference archieves. HUGE time gap from announcement of firmware
update and then the proposed release..... THEN after a less than well
received upgrade, an announcement to....."Keep Looking Here" with
little hints and the release plan. When the 246 and 396 were announced
a full line of pictures somehow became public and that was the teaser.
Several pictures of prototypes. So the activity I have observed from
Uniden has been markedly different this time. GRE wasn't releasing a
model if I recall when the 396 was announced. So, I still stand by my
position that the promise of working on a long awaited firmware upgrade
> coincidentally was announced right after the release of the 500 but
the actual firmware release and all that checksum nonsense came well
after that. Then after all that the "Teaser" Avatar of UPMan came out
in his Radio reference posts and the announcemnt of the 396XT. You are
probably correct in your observation and thank you for pointing that
out, but this timeline was a little different this time around. Sorry
I didn't mention the sudden firmware update announcemnt out of the
blue and all the things leading up to this latest product offering.
>
> I own more Unidens than GRE's by the way.....and they get used
daily. Not a GRE spokesman.

Yeah, when I got my 396 in 2005 (one of the first few units in
Chicagoland), I thought that 400 channels per system was basically
infinity ... Now I live in Oklahoma and I can't put all the possible
tags for the state TRS in one System. :-) (I have a bank with all
... well, most ... so I can ID roamers).

Looking forward to the 'XT!

So you would have switched brands due to the memory?

Then what go to GRE PSR-500 or Pro-106 and get 1800 total objects per v-folder instead of 6000?

If your struggling with needing more then 6000 at one time other brands wouldnt help you out, even with v-folders.

No other digital scanner has even come close to Uniden's 6000 channel limit at one time.

But yes its nice to see the memory increase in the next model.

Funny you should ask that. The same question was asked today on the ARC396
Yahoo group. Here's the reply from Gommert, the developer of the ARC series
of scanner control software:

ARC396 will not work with the BCD396XT, the software for the XT is
based on ARC996 and that program can read/import ARC396 files.

Gommert

Discontinued at the dealer maybe? Can you post a link of the RH ad you speak of?
I think the plan is to support both of the new XT models.

209. Question About Band Scope Performance

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-12-09 20:45:42 UTC
From: Ryan
Topic: 209 Message: 209

First off, I can't wait for this scanner to be released. I'm salivating.

In the manual:

"Band Scope Mode searches a frequency range and displays the signal level in real time."

Does that mean the display updates in real time? What exactly is 'real time' any way. I imgaine it has to tune each frequency in the range, right? So - the fastest it can go is 300 steps a second (with 5kHz steps), or 100 steps a second when using any other step size. What I was unable to determine was how large a range you can set. Is there a limit?

I am no expert, and maybe someone can check my math. In the visuals in the manual it shows a range between 850 and 852, with a 12.5khz step. That's 160 steps to search through, at 100 steps a second... meaning the display will update no faster than 1.6 seconds. Is this what "real time" means?

Does this accuratly depict how this feature would work?

210. Re: Question About Band Scope Performance

> What I was unable to determine was how large a range you can set. Is
> there a limit?

Yes there is. It is in the manual. Here are the possible range spans:
"You can select from 0.2 / 0.4 / 0.6 / 0.8 / 1 / 2 / 4 / 6 / 8 / 10 /
20 / 40 / 60 / 80 / 100 / 120 / 140 / 160 /
180 / 200 / 250 / 300 / 350 / 400 / 450 / 500 (MHz)."

> I am no expert, and maybe someone can check my math. In the visuals
> in the manual it shows a range between 850 and 852, with a 12.5khz
> step. That's 160 steps to search through, at 100 steps a second...
> meaning the display will update no faster than 1.6 seconds. Is this
> what "real time" means?

Based on information in the manual, this does look to be accurate
(assuming my math is correct). This means the bigger the range, the
longer it will take to refresh the scope. Band scope mode is
essentially a visualization of a search operation. From the manual:
"The search time changes depending on the search step size."

I think my previous math was wayyyy off. What might be interesting is
viewing, say, the entire FM broadcast range. How do you calculate
the refresh time? If I have a 100Mhz range, 1,000 total frequencies
at a step size of 100kHz, search rate of 100 per second = 10 seconds
to refresh the band scope? I did fail math, you know. So don't trust
me.

> Does this accuratly depict how this feature would work?

Still no clue. I'm still guessing. From the manual it looks like
there is actually a visual indication where it is in the 'refresh'
process (I think that is what the little "ray" icon shows). Also,
with 32 bars to show the whole scope, I'm totally lost as to how easy
it will be to tune to a 'spike' you are seeing in the scope. Nor do I
understand how easy it will be to view a band, move center, zoom in,
scan the band again, repeat. I look forward to seeing YouTube videos
of this some day soon.

To see what this looks like (statically), look here:

You should also look in the software reference (page 189).

I set my unit to a center frequency of 450 MHz, span of 6 MHz, and step of 12.5 kHz. Took about 6 seconds to sweep.
Changed to a 5 kHz step, it took about 13 seconds.

And just did it again using your example of the FM broadcast range:

CF: 98 MHz
Span: 20 MHz
Step: 100 kHz

Sweep time = just under 9 seconds per sweep (10 sweeps took 88 seconds)

Perhaps this is much slower than I thought. Clearly I was way off regarding how to use a band scope. I apologize for not having a professional background. I'm not even a competent amateur (put me in the beginner hobbyist category). Is the following right?

20,000,000 Hz range.
100,000 hz step
---
200 possible steps in that range. right?

Let's use the bigger benchmark you posted. In 10 sweeps it would look at 2,000 steps. 88 seconds to perform those 2,000 steps means it has a performance of about 22.72 steps a second. Is that right?

Looking at the previous post:

6,000,000 Hz range.
12,500 Hz step = 480 steps / 6 seconds = 80 s/sec.
5,000 Hz step = 1,200 steps / 13 seconds = 92 s/sec.

Am I right? Maybe those of you good with math can create an easy to use forumla for determining band scope performance.

The reason why I ask is really about the term 'real time.' Marketing people love this term, but the truth is there are so many ways to define it. What it means in this case (I would guess) is that the display updates in real-time, whenever the scanner actually gets around to checking that step (which may be quite a while depending on step size, range, etc).

For those of you who are experts, can you share how this feature compares to other band scopes in the market?

-Ryan

At the moment NO
Uniden wont confirm nor deny if it may be a part of a future firmware update.

Hopefully Uniden will take note of the amount of people asking for this feature. And I know a few people who bought GRE/106 radios due to that feature.

Excuse my ignorance, but how is the radio ID useful? Perhaps if people like me understood why this would be a helpful feature, it will cause us to be more vocal about requesting it. I am sure that if the feature is that useful, Uniden will eventually get the point.

Just like any software group, the Uniden engineers have limited resources. They can work on X number of features in each release. If you want a group of Uniden engineers to build support for Radio IDs, users need to be asking for it more than other features.

Am I correct in assuming this would really only be useful if you wanted to scan specific radio IDs? What, exactly, is the feature request we should be asking for? "Only break squelch if these radio IDs transmit, regardless of talkgroup: <list of IDs>" or - "let me hold on a specific radio ID, regardless of talkgroup" - or - something else?

Ryan,

It might be better to go over to the GRE forum area on RadioReference and search for "Radio IDs". It's about the same thing what you are asking now... and read these threads/topics.

GRE & RadioShack newer digital scanners handles the Radio IDs now.

Will we ever see radio IDs on scanners?

It's useful for the same reason TGIDs are useful - to identify who is talking. It's a really nice feature on the user radios. The GRE implementation of it sorta stinks. It will never change during the conversation (unlike the user radios) and many times it never sees any IDs.

The only down side is that if you had text tags with them, you could use all 22,000 channels worth of memory on one trunked system! Of course, if that is a priority for you, it's really not a down side.

Uniden has a chance to really show up GRE on this feature.

If we, the customer, can accurately describe an implementation of Radio IDs we think would be valuable, I would hope Uniden would listen. So far I've not heard anyone state, exactly, how they would like such a feature to work.

What should it be able to do or not do? Do you just want to see the ID? Do you want to alert on the ID? Do you want to store IDs? You mentioned the GRE implementation stinks, what would make it better? Uniden can figure out how to implement it, or maybe GRE is reading this forum and will fix their implementation. Then if you want to use Radio IDs, you can simply buy a GRE radio. It won't take long for Uniden to get the point that this is a feature people really want.

I personally don't think that a lack of Radio ID support is going to stop me from buying the 396XT. That said, I can see how implementing the Radio ID with computer software might be really cool. You could draw 'live' maps of all the radios in a system. Once I determine who dispatch is, I'd like the ability to change the backlight to a specific color every time dispatch broadcasts. This way I could have a visual indication any time dispatch is talking. In my listening area, there may be several dispatchers. Such a feature would be useful.

Who is not going to buy this radio if it doesn't support Radio IDs, but will go buy a GRE instead?

> like such a feature to work.

Fair 'nuff. :-)

> What should it be able to do or not do?

Obviously, decode and display the Radio ID. I would have it alternate with the talkgroup ID (or text tag) much like the System ID and Group ID alternate.

I would further want it to have an optional text tag for each ID so I could mark ID 12345 as "Anytown PD Car 7".

I would also want it to be reliable and switch as the user radios do whenever a new person keys up.

I think that sums everything up.

> Do you just want to see the ID?

Not just, but that is a key item.

> Do you want to alert on the ID?

Alerts would be nice, too (both audible and visual - like the talkgroup channels).

> Do you want to store IDs?

Kind of necessary for text tagging them.

> You
> mentioned the GRE implementation stinks, what would make it better?

Doing what I mentioned - especially the switching when a new user talks and tagging of them.

> I personally don't think that a lack of Radio ID support is going to
> stop me from buying the 396XT.

Uniden has a lot of benefits over the GRE/RS units. But, just having some better features is "not enough" if you want to dominate the market (or continue to in Uniden's case). For those who want the feautres

unique to GRE, there is a choice - but both and live with having to use two units, or sacrifice the features the unit you choose does not have.

> That said, I can see how implementing
> the Radio ID with computer software might be really cool.

It works very well on the user radios. Unfurtunately, my county tags very few of the users - just tagging those in your own municipality.

> You could
> draw 'live' maps of all the radios in a system. Once I determine who
> dispatch is, I'd like the ability to change the backlight to a
> specific color every time dispatch broadcasts.

Exactly - a point I mentioned above.

As for knowing them, many people have Trunker/UniTrunker/PRO96COM etc ID files for popular systems that already have many of the RIDs.

> This way I could have

How important is that feature to you? It's certainly something that would draw me to GRE if it worked well. Now, would I want to give up FTO, Paging decode, and all the other features unique to Uniden? Again, it depends on a few things:

1. Does Uniden want to dominate the scanner market?

2. How much R&D will RIDs cost? (really should be minimal since it's in the P25 spec for those systems)

3. Is there enough in the budget to allow for #2?

4. Is there enough user demand to warrant #s 2 and 3?

5. Is there enough R&D time available? (or would it delay other projects - perhaps projects that would be more profittable?)

Ryan,
You can already do this with Unitrunker, not the mapping part, but the ID color codes for radio ID's

223. Any dealers taking pre-orders?

Topic: 223 Message: 223

I was fortunate enough to win a jackpot on a casino slot machine so I can finance the purchase of another scanner. Are there any dealers taking pre-orders? Anything further on a more precise release date or a firmer pricing figure?

I checked around a little bit last night. I didn't see anything on ScannerMaster or Communication Electronics (usascan.com).

I sure wish Scanners Unlimited was still open. Glen was the best. I preordered by 396T from him. Had it overnighted, and in my hands the day after it was released. I know others had to wait days before they got one.

Has anyone else found a dealer doing pre-orders?

Frank

Hi all.

My name is Wayne and I'm in Australia, I was about to go ahead and order the 396D (Digital) in Australia when I learned about the 396XLT the next day I rung Uniden Australia's head office and spoke to the head of Sales, Marketing and distribution to ask when and of if this model will be released in Australia.

So far that's the way it has happened only to be told NO it's just a Christmas prank that some one is running on the net and that I had been sucked into a scanner that doesn't even exist despite me directing this person to the various sites on the web they would not have a bar of it, so I'll be interested to see if

(A) dose it appear in the US and

(B) dose it make it to Australia

Either way you can bet if either happen I'll be onto Uniden in Australia and back to the person to whom I spoke to so quickly it's not funny either they are

(A) right and we have all been sucked in or

(B) they are trying to put people off the trail or

(C) they really are just Dumb

Thanks for the info that has been passed in this group so far I'll keep an eye here with great interest.

Rgs
Wayne.

It would be *BAD* business for it to be a joke - I'm sure there are lots of people who are holding off at purchasing a regular 396, in hopes that the XT comes out soon. If it was a joke, they'd likely loose those customers to the GRE product. I sure wouldn't buy from Uniden again if I was 'suckered' into waiting for a scanner that isn't real.

Paul seems like a straight-up guy, I can't imagine him doing such a thing.

Have you seen any of the posts by Upman (Paul)?

I've seen him on the groups and RR for an extended period now and his posts are mostly of the "take it to the bank" genre (IOW you can count on what he says to be correct). With that in mind, I would be QUITE surprised if this all just a "prank"?

The other question to ask yourself is "what would HE gain?" (by this prank)

I would also ask myself "What does your local guy gain?" (assuming he is NOT bringing out a new model and really wanting you to buy his current one).

On a good day, this information may well be worth everything you paid for it. <wide grin>

For what it is worth in this discussion...

I have the computer programming protocol for the BCD396XT so it does exist. Others on the BCD396T list have mentioned being beta testes for the unit as well.

1. It WILL appear in the USA. There are even pics of it put out from Uniden (Uniden AMERICA, that is). Now, Uniden AUSTRALIA may not have any plans for a compatible version, but the two divisions have little to do with each other.

It is definitely not a prank. Uniden isn't that stupid to think they could fool everyone for long. If you don't believe me - just wait for a couple weeks to a couple months and you will see. The release date is Q1, 2009, and pranks never limit their lifespan like that (that's why you see pranks decades old still floating around).

Topic: 223 Message: 236

Wayne, I'm guessing Uniden Australia will eventually release a UBCD396XT but the Australian versions have different firmware to the US models (different cellular frequencies blocked being the main diff) which take time to compile; typically it takes AT LEAST six months after the US release before you will see a particular model down under, if they release it at all?!

It does not surprise me to learn that UA have not heard about the XT yet, at least not the stooges that answer the phones anyway, they're just towing the party line. Maybe the guys that re-jig the firmware may have gotten a heads up by now but you won't get any info out of them with regards to a release date!

You could of course import one yourself but UA won't want to know you if you have a warranty issue and apparently it wouldn't properly track some of the Aussie 800Mhz trunk systems (some of the channels are in a blocked range of the US model) or some sites on the NSW-GRN (which uses three split 400Mhz bands).

Still, it's interesting that they would actually tell you it was a "Christmas prank"?

Happy Holidays to all!
The Bigfella

P.S. "UBCD396XT", come on guys, there's still a couple of letters left in the alphabet you can throw in there! :)

Uniden Australia manages their own categories. Sometimes (not always) based on Uniden America's products.

The US version is not a joke. I cannot speak for any other division (and haven't seen any public announcement from any other division regarding new models...).

It would be *BAD* business for it to be a joke - I'm sure there are lots of people who are holding off at purchasing a regular 396, in hopes that the XT comes out soon. If it was a joke, they'd likely loose those customers to the GRE product. I sure wouldn't buy from Uniden again if I was 'suckered' into waiting for a scanner that isn't real.

Paul seems like a straight-up guy, I can't imagine him doing such a thing.

I see that the Uniden wiki has been changed. They switched from mediawiki to twiki. It also seems about 3-5 times slower (in my opinion almost too slow to be useful). What do you guys think?

http://info.uniden.com/twiki/bin/view

Can anyone at Uniden tell me if this is the final version of this wiki? I'd hate to convert all the external links I had to twiki, only to have you move them to some other format in a week or so. Also, can you address the performance concerns? Is it just me?

Can we please get back to the original topic? Two of us asked about pre-orders. Somehow, we got derailed into conspiracy theories about whether or not the radio even existed.

While I know I should be used to it from this group, as many are from the 396 group, please keep your personal opinions about things that haven't even been released to yourself.

All me and the original poster are looking for are places that are taking pre-orders.

I know Paul since I was a beta tester for 3 of the recent Uniden scanners. The only time Paul has joked might be April 1 and within a day he would let you know it is a joke. The users manual for the BC396xt is on the internet. No one is going to write a user manual as a joke. THIS IS NOT A JOKE. Unfortunately the guy in Australia has been given bad information or is just ignorant.

This is the final software platform (but we'll be updating the content and also updating the "engine" as they become available).

I've started taking some steps to help the speed, including reducing some of the image sizes. We might also be looking at some faster server hardware (but not immediately). Still evaluating whether it is the pipe or the pump that is affecting the speed.

Hi again.

Let me first off start by saying I'll accept Jan Fine's first answer that " I've been given bad information by the sales, market and distribution manager at Uniden Australia " I'm in no way ignorant I have been in this game for over 25 years and hold more radio licences that you can point a stick at I also work in the industry I was simply putting up an experience as to what happened to me when I raised the question about the 396XLT in Australia as I would really like to get one, I never doubted that it would be released, no one could go to the trouble of inventing all the tech specs ect I'm more than aware of that.

I look forward to more interesting info here on this group about the 396XLT and once I am able to find out once and for sure as to weather or not it will come to Aust I'll consider ordering one from the U.S. if it is that it's not coming to Aust but yes as another poster rightly pointed out then I'm creating more problems for my self with the lock out of the 800 Mhz band because of the U.S. phone band lock out.

Which brings me to my next question are there any scanners brought from Aust and shipped to the USA to get around this problem ?.

Any chance of any one here that is close to any one in Uniden in the U.S. maybe asking the question as to weather or not we'll ever see the 396XLT here in Aust ?.

Once again thanks for all your info so far and I'm sorry if my question has tied up this other wise not so active group with chatter about what some people might not want to / are sick of reading about weather of not it was some sort of Christmas joke.

If you go back and read my original email I never doubted it was real, I was just posting what it was that Uniden Aust said all I did was raise the questions in hope of some more positive feed back which has been more than forth coming so Thanks again.

On that note I hope that every one here has a very safe and enjoyable Christmas and a great and safe start to the new year and that 2009 will be better than 2008 for every one concerned and here's hoping that the big guy in the red suite leaves you every thing you want under the tree this year.

Regards
Wayne.

Assuming that twiki is on the same hardware as mediawiki was, It's the
software. It's click ... wait ... wait ... wait ... page appears.
Very annoying. (sorry!)

Hello,

My name is Ken Proctor. I'm a scanner buff and have my heart set (and my wallet programmed to disappear) to purchase the new BC396XT, when it finally comes out sometime in 2009 I'm hearing.

I have virtually no knowledge of trunking though I've read things here and there on the topic from when I first got into the scanner hobby (back in the 70's and since) but REALLY need to start from scratch and become comfortable with trunking since I'm hoping (planningm, actually) to snatch me one of those BC396DXT's.

Does anyone have a pdf of the manual yet? I have the one for the current version (396T). Perhaps it won't be out until Uniden formerly announces if later this next year.

Paul,

I was starting to work on a personal program to monitor the 396XT. One thing I am struggling with is how the control channel data stream message appear.

It seems that every nearly message to the radio is synchronous. You send command 'x' and get back a response. There seem to be a few exceptions to that.

It looks like the CSC (Go to Custom search and get reception status) command and all of the control channel data stream messages. It looks like once enabled, they just start constantly sending asynchronous messages. Is that correct?

Are both synchronous and asynchronous messages being sent?

Thanks,
Frank

Twiki is written in Perl, and executed via CGI (slow). This type of software implementation really needs a cache in order to get decent performance out of it. Caching solutions include mod_perl, fastcgi, SpeedyCGI, etc.

I'm not sure how any of these caching mechanisms would cause a delay in content availability. It is the code/byte/database objects that are cached, not content (with perhaps some exceptions).

It seems like mod_perl could be the best fit, with some possible caveats. It appears the attitude is "try it, if it works - great." Fastcgi appears to be the best technical fit (as it often is in these cases), yet you'll have to get busy with a text editor to implement it correctly. Not hard, but for sure in bad form by the twiki project folks. It really would not have been hard to properly support this.

Please DO NOT implement a content cache (ie, PublicCacheAddOn, VarCachePlugin, etc). This is a 'first byte returned' issue, not a content issue. If you stop the fork->parse->compile->execute process on every request, you'll be much happier.

Another thing that may help is by using persistent perl, where it all resides in memory.

Hello, I have the Uniden BCD396XT, and I ordered the serial cable, but of course it does not have any software. I tried the Uniden website, and it has the firmware software, and the programming software, but it doesn't have anything for the serial port. Any help would be appreciated. Thanks

Topic: 253 Message: 254

First of all you do not have the BCD396XT.
If you think you do let me know where we can get them.
They aren't out yet.
You must have the BCD396.
The cable you ordered has to have software with it or work automatically.
Otherwise go online and try to download a generic software.

From: Uniden UPMan
Topic: 253 Message: 255

1. BCD396XT is not available for sale anywhere. If you really have one, contact me directly.

2. If you mean BCD396T, the serial cable comes with it and does not require any driver (I assume by "software" you mean "driver".)

3. If you mean a USB cable, it depends on which cable. If the USB-1 cable from Uniden, the driver software is available at:

http://www.uniden.com/my/downloads.cfm?product=USB-1

(You must log in for the above link to work.)

If it is a different cable, you need to follow the instructions that came with that cable.

4. If you mean programming software and not "driver", then you can download UASD (Uniden Advanced Scanner Director) at:
http://www.uniden.com/my/downloads.cfm?product=BCD396T
(You must log in for the above link to work.)

Or, there are several other programming packages available. Read about them at:

http://wiki.radioreference.com/index.php/BCD396T

256. BCD396XT A Year Away?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-12-29 19:53:12 UTC
From: Ryan
Topic: 256 Message: 256

Q1 2009 is soon approaching. Has anyone heard any recent official updates regarding this scanner? It appears the BCD396XT and BC346XT have been accepted by the FCC. I don't know much about the scanner industry. What are the steps involved after acceptance that must be completed before retailers start to see units. Has Uniden even publicly acknowledged the FCC acceptance?

Also, if Uniden retailers were receiving pre-order information & pricing for this unit - would they even be allowed to say anything?

I called Scanner Master and talked to a sales guy. He said they haven't heard anything regarding manufacturing. He stated that he wasn't even aware of the FCC acceptance. He also said, based on past Uniden experience, that they are unlikley to even start manufacturing until the current stock of 396Ts are reduced. He indicated that might take a year (nooo!). With the slow down of the economy, are we unlikely to see the 396XT available in 2009 at all? Is the 396XT scheduled for a Q1 2010 availability?

The Scanner Master sales rep hasn't heard from people who are interested in this scanner. I suggest everyone start calling their favorite distributor of Uniden products and asking them what they know about the 396XT. If they don't hear from customers, they are unlikely to care much. Even the sales rep I talked to didn't see the big deal. "Well, they really didn't change much." I was like "No. They changed a lot! And I can't wait for this scanner to be available!"

I'm not buying the 396T. I don't want the 396T. Anyone who cares much about this stuff is sitting on a pile of cash waiting for the XT. However, if retailers don't know this they are going to interpret slower sales of the 396T as a sign the XT won't do well. So, do your part and let your retailer know you aren't buying the 396T because you are waiting for the 396XT. Maybe if enough people ask, they will start a waiting list or something. This could give them the information they need to back the release of the product. If I have to wait a year, then I will re-evaluate how the 396XT competes in a year. However, I would buy it today if it were available.

If you call a retailer and ask about availability of the 396XT, drop a note in here and let us know who you called. Scanner Master's phone number is: 1-800-722-6637. If you care about this scanner - let's make some noise!

-Ryan

Q1 2009 can be anytime up till March 31st 2009.
So lots of time, just because you dont see it for sale on January 1st
I wouldnt panic, or think its delayed until 2010

The retailer you spoke to is either mis-informed (not much difference
and a year wait) or was just hoping youd buy one of their 396T's to
get rid of them

I don't know what you expect to do by telling everyone to call dealers and harrass them about something THEY have no control over. Only Uniden has any control over when they hit the shelves, and according to Uniden, Upman in particular he stated pretty plainly the 1st quarter of 2009, NOT 2010. He isn't about to delay it a year as his job is on the line, and he has been pretty well on time in the past, so when he says 1 quarter of 2009 you can be assured it will be then. So hold your shorts, it's coming and BE PATIENT!

John

Q1 2009 is a 3-month period. The START of that period is approaching.
No promised date has been missed.

Do you really think browbeating the dealer is going to get the radio
out any faster? Do you think this is a conspiracy by Uniden to deplete
the stock of the 396T? Then, why would they even announce the 396XT
until the stocks were deplated? Why would you even need to ask a
dealer when the radio will be available when the Uniden PRODUCT MANAGER
FOR THIS PRODUCT told you in message #112 when the product would be
available? If you don't know what it takes to bring a product like
this to market, how can you be so critical of the process?

Do you really think you could go into your nearby GM dealer, tell them
you weren't going to buy the current model because you were waiting for
the 2010 model that you saw on GM's web pages, and expect them to get
on the phone and tell GM they had to have that model right now because
ryanisflyboy wants one? I suspect they'd still be ROFLTAO.

Spare the rest of us rants like this, please. Wait like everybody else.

By the way, the questions above are rhetorical. No answer expected or
wanted.

I would bet you're right. When was it announced? The announcement is usually not more than 6 months from release, and I think the announcement was made in August (which would make release February).

Bad example - GM dealers would do *anything* for you if they thought
you were going to buy a car from them!

I guess the point of my original post was ill conceived. I apologize if this has caused any misunderstanding. My goal was to:

1) Ask if anyone knew of any more current official announcements following FCC approval.

2) Ask if you thought the sales rep at Scanner Master was correct. By these posts, I can see you generally do not feel he is correct.

3) Invite people to ask retailers about the scanner.

I do not advocate 'browbeating' any one. Especially retailers. That would do no good. However, I fail to see the harm in simply asking a retailer the following: "I know the BCD396XT isn't available yet, but would you please give me a call when it is?"

And yes, I do expect that dealers will listen to their customers. Not one customer, but many. If several customers called saying "I'm not interested in buying the old model because I'm waiting for the new model to come out. Could you please tell me when it is available?" is going to get some attention. Without that information, they are left to fill in the blank with "economic crisis," "no interest," or some other excuse.

Will this speed up the availability of the scanner? Maybe, but probably not. I fail to see the harm in doing so though. In fact, I see it generating interest, buzz, and excitement about a product that is sure to be a big hit.

Until they get type acceptance, a manufacturer would be taking a huge gamble if they already had started the production lines. If the FCC, for whatever reason, denied the acceptance ALL the radios that had been manufactured would have to be re-manufactured once type acceptance is made.

It is rare production facility that isn't booked well in advance. That means, once they get production approval, there's a period of time where the actual production has to be scheduled. One would presume that the actual production facility is already ready (all tools and machines in place that are specific to whatever is being built). And then there's the shipping issue. Distribution issue and so forth.

I *suggest* a minimum of 6 weeks from type acceptance to on dealer's shelves. That is a pure GUESS on my part.

---------- Original message from "Bill" <wamann@...>: ----------

My 2 cents worth but if it has been accepted by the FCC it won't be long now. Just a few weeks I would guess. Anyone else??

Subject: [SPAM][BCD396XT] BCD396XT A Year Away?

Q1 2009 is soon approaching. Has anyone heard any recent official
updates regarding this scanner? It appears the BCD396XT and BC346XT
have been accepted by the FCC.

That's not exactly true. The only thing they cannot do is sell or OFFER it for sale in the USA. They can produce it without TA.

The issue of it not receiving TA is a non-issue since it only has to meet certain specs, and the manufacturers know what those specs are. All TA means is that it has been certified to meet those specs and the FCC has accepted that proof. That certification isn't even done by the FCC - it's done by an outside company and submitted to the FCC with the original application, so they know if it meets the specs before receiving FCC TA.

Also, I've seen products out within days of receiving FCC TA. Not that I expect that to happen in this case, but it's not as if the product cannot be made before TA has been received.

That's why I said they'd be taking a huge GAMBLE. I didn't say they couldn't make them, they can make anything they want....but as you noted....who care what you make, if you can't sell it?

And you think that's not an issue...tell that to XM/Sirius. They just paid a $27 MILLION fine plus had to retro-fit ALL existing radios of certain series, because even thought type accepted....their FM modulators were out of spec. The production models didn't match the engineering models.

I'm well aware that the FCC accepts outside engineering reports, etc. But are you aware, that the FCC is known to pull production units and test them to insure that the specs are still being met? Especially if they get complaints about units being out of spec.

Yes....Uniden has NO incentive to create an out-of-spec radio, but that doesn't mean they're willing to gamble a big production run only to have an issue later on.

Again...my comments were a GUESS, what Uniden (or anyone else) is actually doing is their business, not mine.

Well, when you make something different than you submitted for TA, that will happen - even if it's made years after TA was received.

I don't know about the rest of you but, I'm gettin' itchy fingers and sweaty palms in anticipation of the new version of the -396. I was literally days from placing my order when I learned that a new version with changes/improvements (like changeable colors for the display, etc.) that I was SOOOOoooooo thankful that such changes had been made. I feel like a seasoned gunslinger with my itchy hands on my wallet (containing my charge card). HELP ME COPE !!!!!!!

Ok, I feel better now.

That's not exactly true. The only thing they cannot do is sell or OFFER
it for sale in the USA. They can produce it without TA.

The issue of it not receiving TA is a non-issue since it only has to
meet certain specs, and the manufacturers know what those specs are. All
TA means is that it has been certified to meet those specs and the FCC
has accepted that proof. That certification isn't even done by the FCC -
it's done by an outside company and submitted to the FCC with the
original application, so they know if it meets the specs before
receiving FCC TA.

Also, I've seen products out within days of receiving FCC TA. Not that I
expect that to happen in this case, but it's not as if the product
cannot be made before TA has been received.

From: JAN FINE
Topic: 256 Message: 276

I sold BC996, BC15, ICOMR1500, and Pro96.
I'm keeping my BC245 to run Unitrunker. I will not need that when the new scanners come out. Not worth selling. I kept my BC396D for digital use and will sell that when the new scanners come out. My BC246 I will keep. I love the battery consumption on that one. I keep it in my car and use it for PD & FD Dispatch. The only thing about it is the lack of quick keys. I will start with a BC396xt and BC346. Then I'll move to the desk top scanners when they come out. I'm redoing my whole shack. I still keep the BC895 for home PD dispatch and as a second radio for unitrunker.

UH? You can still sell your old scanners, I have some that are 30 and 40 years old. Granted you won't get what you paid but you'll get something.

BTW, when your ready to unload the "old" stuff let me know....

Jan,

If I got rid of my older scanners, I'd have to GIVE them away. Yep, it's been too @#$%#$#& long since I was good to myself. Effective the date the new radio comes out, that's all gonna start ... and end.

Ken

I feel the same way as you Ken.
On top of it I'm a school teacher and had 2 weeks off to play with the new radio I don't have yet. I sold off most of my scanners except a bare min.
Want to grab up 1 of each new scanner that comes out.

I don't know about the rest of you but, I'm gettin' itchy fingers and sweaty palms in anticipation of the new version of the -396. I was literally days from placing my order when I learned that a new version with changes/improvement s (like changeable colors for the display, etc.) that I was SOOOOoooooo thankful that such changes had been made. I feel like a seasoned gunslinger with my itchy hands on my wallet (containing my charge card). HELP ME COPE !!!!!!!

Ok, I feel better now.

277. I hit the brakes on the pro-106

Yahoo group: BCD396XT (2008 — 2010)
Date: 2008-12-31 12:18:08 UTC
From: mcginleyjoseph2000
Topic: 277 Message: 277

For some reason I have been a late bloomer in discovering the future release of the XT.
Having owned a pro-96 and a 796 for my digital needs, the recent Radio Shack $299.00 sale price was tempting but I held off hoping the updated 396 would be loaded with new features.
With that said, do we have a side by side comparison list of the new features vs the existing features.

My basic concerns are- deeper and better audio.
Better sensitivity

Thanks all and a Happy 09.

BTW, I don't think you're going to see much change in the audio or reception. Both are limited by the size of the unit - the audio since the speaker has to be small, and the reception since there isn't much of a ground plane for the antenna.

I agree with Joe.

If you wanted better digital audio, and sensitivity then the Pro-106
would have been the way to go. Esp for $299

However with that sensitivity comes overloading on strong signals etc

The Unidens will be in the range of $499 (no sales for $299 etc)
But as they say you get what you pay for...

The 106 does NOT come with an AC adapter or USB cable.

According to the RS website the 106 is selling for $399.99, $100.00 off, but I don't think it's worth it even at $200 off considering it's nothing more than a re-branded GRE in a cheap plastic Rat Shack case. Even at $299 they should at least get a power supply and USB cable! The case is the same used for many other RS scanners and the paint rubs off with use, even minor scratches show the case isn't molded the color you see looking at the scanner, ie: it's painted just like many of the recent Rat Shack HH scanners. The plastic is also soft allowing for easy scratching and cracking..... How they even sell any at $299 is beyond me. Digital performance on an area P25 system is no better than the 396T and it lacks a lot of things I like in the 396T like FTO. I also don't think it sounds any better than the 396T. It just isn't worth the $$ for what you get (and don't get).

I sure hope this is not entirely true! The current 396 is DEAF on the UHF frequencies. The only thing that I have worse is the "C" model Pro-92. The 396 in still my "primary" radio of choice, but I can NOT use it to monitor DC PD (603d UHF) from my home in DC's suburbs. My 235, 245, and 250 will run circles around the 396 when it comes to receiving UHF (mid to upper 400's). I can use the 235 and 245 to monitor DC PD's control channels with pretty much full quieting, and I still monitor DC PD on the 250 while the 396 just sits there and says "Finding Control Channel". Sure the 235, 245 and 250 have "larger" ground planes, but the amount is negligible! I'm seriously hoping that Uniden fixes whatever they broke when designing the current 396's front end.

Not bashing, just an honest observation from someone who has been scanning DC since the early 70's with the old Realistic 4-channel portable.

The 396 is slightly less sensitive than the GRE units, but not to a degree that is noticable in most cases. If your problem is one of overload of the scanner, you should be very glad you didn't get the GRE since they overload much worse than the Uniden units.

True. It also overloads much easier in urban areas resulting in hearing
less, and I think DC qualifies as an urban area where there is lots of
RF floating around.

I actually considered getting one of them when they were $299, but then
after thinking about it I decided it was more wise to put the money
toward a new Uniden model.

21 Scanlists just can't compete with 100 SQKs, and the large trunk
system support eats all the memory since you have to duplicate the TGs
on the GREs.

I have to admit I do love the multicolor LED they have, though.

As I think I said earlier, the 235/245/250 are much larger units that
have a much better ground place for the antenna than the 330/396 does.
That could easily explain the difference.

Dewey,

I agree with you when it comes to UHF my 296 runs circles around the 396 but the 396 beats the Hec out of it when it comes to 800 MHz. I can monitor a Federal prison about 30 miles away with stock antenna the 396 doesn't even no it is there even with two different outside antennas and it still wont pull it in, yet I hook the 296 up and it is full quieting. That being said though I still would not trade the 396 for anything out there.

73

Mike

I sure hope this is not entirely true! The current 396 is DEAF on the UHF frequencies. The only thing that I have worse is the "C" model Pro-92. The 396 is still my "primary" radio of choice, but I can NOT use it to monitor DC PD (603d UHF) from my home in DC's suburbs. My 235, 245, and 250 will run circles around the 396 when it comes to receiving UHF (mid to upper 400's). I can use the 235 and 245 to monitor DC PD's control channels with pretty much full quieting, and I still monitor DC PD on the 250 while the 396 just sits there and says "Finding Control Channel". Sure the 235, 245 and 250 have "larger" ground planes, but the amount is negligible! I'm seriously hoping that Uniden fixes whatever they broke when designing the current 396's front end.

Not bashing, just an honest observation from someone who has been scanning DC since the early 70's with the old Realistic 4-channel portable.

Dewey

I would argue your use of the word "slightly". As a current DC employee, former DC resident of 30 years, then a suburban DC resident for over 15 years, I'm fully aware of densensing and intermod, and that is NOT the problem at my home location. I can hook my Pro-96 up to my external antenna, and still not get front end overload. I am very serious when I consider the 396 to be deaf on UHF, and I know many others who share the same opinion. I also don't believe it to be an alignment issue as I had the 396 in Uniden's service when it was still under warranty, and alignment was one of the areas checked. I can make recordings of any of my other scanners, and I think all who heard them would agree that I had good reception, yet the 396 will not even get a hint of the 603d control channel with the squelch fully open.

Sensitivity specs are published at:
http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD396XTSpecs

Of course, as Joe points out, this doesn't factor in Antenna Gain. This is sensitivity into a test set. You'll always get better performance using an antenna tuned for the band you are monitoring than with the rubber ducky antenna supplied.

How does the 396 perform when on your outside antenna compared to the
96? Or is that the condition of your original post?

I kind of feel the same. (No sweaty palms, though. Temp is about 5 above zero here :-) From what I've seen, this scanner will make this die-hard GRE guy switch sides. The GRE thing goes back a ways and is a long story regarding what Uniden did (or more specifically didn't do) years back. Soured me for a long time on anything Uniden of any product line. They've finally proposed a product that if it performs as advertised will get me to turn over some hard-earned cash to purchase one.

I don't know about the rest of you but, I'm gettin' itchy fingers and sweaty palms in anticipation of the new version of the -396. I was literally days from placing my order when I learned that a new version with changes/improvements (like changeable colors for the display, etc.) that I was SOOOOoooooo thankful that such changes had been made. I feel like a seasoned gunslinger with my itchy hands on my wallet (containing my charge card). HELP ME COPE !!!!!!!

Ok, I feel better now.

There are a number of things that can make the 396 appear to deaf, and in most cases the fix is fairly simple. The firmware can cause it, but a simple re-downloading and installong of the same firware once or twice usually fixes that, the exact same thing with the programming, some times you have to re-install it a couple times. Those two issues are easy to fix. The next thing is obviously the antenna, they do wear out, with rubber ducks it's usually a broken wire internally. I use the Radio Shack 800Mhz rubber duck and bought one that was bad, replaced it and it hasn't come off that radio. And lastly, it's very possible your particular radio may need adjusted and sending it off to Uniden for a tweaking isn't unheard of.

302. RE: [BCD396XT] I hit the brakes on the pro-106

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-01-01 00:38:58 UTC
From: Mike
Topic: 277 Message: 302

John,

Mine has been tested when rig was new and again after it was sent in for repair, which alignment was supposedly checked. Checked with each firmware , new antennas and coax still has not performed near as well as my 296 on UHF using stock outside stock duck and a telescoping antenna, I could set it anywhere and it picked it up without any problem, where as the 396 does not even no it is there. But again this is my personal results and others mileage may vary.

73 to all,

Have a safe and Happy New Year?

Subject: Re: [BCD396XT] I hit the brakes on the pro-106

There are a number of things that can make the 396 appear to deaf, and in most cases the fix is fairly simple. The firmware can cause it, but a simple

re-downloading and installong of the same firware once or twice usually fixes that, the exact same thing with the programming, some times you have to re-install it a couple times. Those two issues are easy to fix. The next thing is obviously the antenna, they do wear out, with rubber ducks it's usually a broken wire internally. I use the Radio Shack 800Mhz rubber duck and bought one that was bad, replaced it and it hasn't come off that radio. And lastly, it's very possible your particular radio may need adjusted and sending it off to Uniden for a tweaking isn't unheard of.

303. What makes the 396XT better?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-01-01 01:20:27 UTC
From: Larry Koch
Topic: 277 Message: 303

I'm curious as to why so many on this list think the 396XT is going to be so much better than the 396. In what areas will the improvements be.

I primarily monitor only the St Joseph, MO P25 system for the PD, Fire, ambulance, etc. I've had a BCD396, BCD996 PRO-2096, PRO-96, PSR-500 and PSR-600. All of them provide about 85% decoding. The other 15% of the time they are either choppy or digitized. Right now I have a 2096 and a PSR-600 both running. Between the two I can get about 95% of the traffic. Signal strength is not a problem. I always have 5 bars on the 600 and 97-99% on the 2096. I've tried all areas of town and get the same results. I've also tried every firmware release for every scanner...same results.

I'm hoping that the 396XT will do a better job of decoding than anything I've tried so far.

Any comments??

It?s the same Hotmail?. If by ?same? you mean up to 70% faster.

It's not really a decode issue that makes the XT a "wanted" scanner but the new features which are in bold print on the 396XT wiki. I doubt decode will be any different, but if it is hopefully it's better...

305. Uniden 396 on outside antennas

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-01-02 00:18:52 UTC
From: dataman60435
Topic: 305 Message: 305

My Uniden 396 performs "EXCELLENT" on all three of my outside antennas=RS25-1.3 grndplane with 9913coax, and two ChannelMaster 5094A one with 9913 and one with RG8U up 35'...Im 35 miles SW of Chicago and i receive all UHF-460mgz zones fine on the 396 so UHF is not a problem on mine...On the ILL-Starcom 700/800mgz Digital System it does very well using 1.13.17 ver, Auto8 and set to FM....Some have gone to 3.01 and had bad results....I get very little overload on the 396...The only problem with the 396 is "AUDIO", using a external speaker is very helpful...The audio on the GRE/RS models is excellent...I have been a Uniden person for years and thank both companys for fine products....A very HAPPY NEW YEAR to all , i appreciate all your yearly post's and have learned alot....

314. Decoding simulcast P25 systems

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-01-21 05:38:22 UTC
From: Peter Elke
Topic: 314 Message: 314

My hope in that the Uniden development team move to an area with a P25 simulcast system.

I have been traveling around the country and testing the BCD396T in states where they are common. In my testing I compare the 396 (with firware v2.9 and 3.01) with ether an Astro Saber (Mot Type II Digital) or an XTS2500 (for 100% P25). What I found is that the the 396 works very well on single transmitter sites and is almost unusable in simulcast areas.

My testing was in Minneapolis, Detroit, New Orleans, Denver, Orange County, San Diego.

It is amazing how the Motorola radios never hiccup and the 396 stops decoding even after playing with the "hold key" adjustments.

I am confident that if the development team lived near one of these sites (and lived with the results daily) they would discover how to mathematically work out the trick of multipath decoding.

If they get this right I will buy both a 396XT and a 996XT and stop lugging single band portables around with me on planes.

That's odd. It works fine on my local P25 simulcast system.

Hold key adjustments? What version of firmware are you using? Although my 396 has never sounded bad, it's possible that upgrades to the firmware could have made a difference on the systems you mentioned.

What's even more odd is that I have heard anomalies on my XTS portable and XTL mobiles. Granted, the 396 will sometimes, too, but when the user radios do it too, I doubt there is anything that would not do the same.

Again, maybe the answer is that it's already been done and you simply haven't bothered to install the upgrades. You've described doing things that you cannot do with the latest firmware.

The 396 works fine on the Cedar Rapids Motorola Type II 3600 Digital TRS that I use the 396 for. And it is a 2 site simulcast system. Now and then it does have a hiccup, but it is very much usable.

I have barely tested it on a P25 Standard 9600 baud system. I was in the Quad Cities on the Illinois side and it sounded garbled. I was on the move in the vehicle, and couldn't really play around with settings much. Also, it was STARCOM 21. I've heard of some problems with the system itself.

As has been said before each P25 is supposed to be set up with specific timing, the problem is many systems are not set up within the specs and thats when you have decode problems, it's multiplied on a simulcast system. Additionally reception is differents too, lower power for the same, or more coverage. Antenna choice, even weather make huge differences in whether you get clean clear transmissions or not. Also you honestly cannot compare a $3000 radio to a $500 scanner.... thats just common sense.

John

Good explanation John. I have the same problem as Peter described and I am also hoping that the XT will do better. I have tried every digital trunking scanner on the market (RS 2096, 96 - Uniden 996, 396 - PSR 600, 500) and had mixed results with them all.

John, is the timing problem caused by sloppy maintenance, faulty design, poor manufacturing or global warming?

John,

That part about the $3000 Motorola XTS and the $500 scanner comparison point you make is a good point. I've not had opportunity to really compare audio with the two, so I wasn't the one who brought that one up. I was just relating my experiences with the scanner. I've had luck with the 396 in Cedar Rapids and really look forward to getting the 396XT.

As has been said before each P25 is supposed to be set up with specific timing, the problem is many systems are not set up within the specs and thats when you have decode problems, it's multiplied on a simulcast system. Additionally reception is differents too, lower power for the same, or more coverage. Antenna choice, even weather make huge differences in whether you get clean clear transmissions or not. Also you honestly cannot compare a $3000 radio to a $500 scanner.... thats just common sense.

Given the price difference, I think the 396 does a great job. Much of that price difference is going to be due to the transmitting abilities of the XTS as well as some additional P25 VOCODER licensing fees, but still, for $500 the 396 holds it's own very well.

The XTS does have better sensitivity, but that is to be expected of a unit designed for a specific band. You cannot compare that to the broad front end of a scanner.

It's probably better that the 396 doesn't have more sensitivity - just ask any GRE scanner owner who travels into 'RF rich' areas. Their slight sensitivity advantage quickly becomes a disadvantage.

Sloppy install to start with, and not fixing it during maintenance, gllobal warming is a joke in my book, and it won't affect the system other than needing better cooling in the summer. Kind of odd situation here with a P16 statewide system last week where they had to put heaters at some microwave sites because they got too cold and failed.

Good explanation John. I have the same problem as Peter described and I am also hoping that the XT will do better. I have tried every digital trunking scanner on the market (RS 2096, 96 - Uniden 996, 396 - PSR 600, 500) and had mixed results with them all.

John, is the timing problem caused by sloppy maintenance, faulty design, poor manufacturing or global warming?

I own a PSR 600 and don't see an overload issue, but then I don't use cheap coax too, which I believe makes a huge difference. As a test I used a regular $29 CB antenna and it's built in coax and then my own coax and antenna, the cheap junk got lots of interference while my setup using thin LMR400 got none. I'd say the coax is a major contributor to problems. Another thing I found was that with the car running, or even the key on I got more noise as well, the cheap stuff was picking up the electrical noise of the car.

The biggest issue, and it has been stated by Upman in the past is that the scanners are built to use the SPECIFIED timing for P25 systems, the problem is many of the systems aren't actually using that specification and then decoding is an issue. I don't see any scanner being able to "fix" that, it's up to the radio system techs to bring them into spec, not Uniden or GRE for that matter.

Other than poor connections at the connectors, how would poor coax cause more overload? If anything better coax will have less loss resulting in stronger signals and more overload.

It's not the timing that is the problem - it's the deviation of the signal. Too many systems are too far out of spec. If they all were perfect, the setting of '8' would have worked fine on all systems. Still the same causes... sloppy installation/maintenance.

Global warming is very real. It happens in cycles. We happen to be in the higher part of a cycle right now. The increased solar activity might have something to do with it, too. We gotta stop making the sun hotter! ;-> (as if we've ever done anything to cause any changes to the sun...)

As far as us *causing* global warming, I agree - mostly cow doo-doo. Although there is a valid argument about there being more people living on the planet right now than ever before. That could cause warming, too - much like getting a large number of people in a room - even in the winter you need to run the A/C or open some windows. But, the only solution to that is to kill people. I don't think many would agree that is a viable option.

But I digress...

Yes, it can allow for additional signal loss and signal ingress, but compared to the 'ingress' at the antenna it's negligible. I just don't see the relationship that poor coax = more overload. If anything, the signal loss would reduce the overload potential.

There is a valid argument that better coax = more overload since there would be more signal present.

328. MPT 1327 / 1343

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-01-21 21:27:47 UTC
From: Wayne
Topic: 328 Message: 328

How's about Uniden make the 396XT to be the first scanner on the market that is capable of receiving and following the Motorola MPT 1327 / 1343 trunking network.

The MPT network seems to be the only trunked system that is not covered by today's scanners and yet it is so widley used it's as common as it's been around since 1988.

Surley it's not hard for a new scanner to do this it should be a walk in the park considering all the other things scanners can do today including all the other trunking network they are capable of monitoring and following.

Regards
Wayne

Common? Not common here or anywhere I have traveled the past couple years. It's more common overseas though. Here in Indiana we have a total of two businesses that use it, and I don't know of any public safety systems in the States who use it so it can't be too common.

334. MPT System

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-01-21 22:14:46 UTC
From: Wayne
Topic: 334 Message: 334

According to a quick search I've done on Google MPT trunking is used in 85 countries of the world I'd say that's a pretty big chunk of the world and a good reason for Uniden to include it in a new high end trunking scanner.

http://www.mpt1327-usa.org/introduction.htm

http://www.google.com.au/search?client=firefox-a&rls=org.mozilla%3Aen-US%3Aofficial&channel=s&hl=en&q=countries+that+use+mpt+trunking&meta=&btnG=Google+Search

One problem with that fact... the XT for this list is being developed
for Uniden *America* which is North America only.

Maybe they will add it to the UBCD396XT (if they make one).

MPT1327 is semi popular in North America as well

However,
MPT is based on a "one to one" model as opposed to a "one to many"
model which is what LTR, EDACS, SmartNET/Zone and so on are based on

Because of this, tracking groups isn't as easy as it is with other
systems.

To put it in more common use, imagine a SmartNet system using private
calls for the majority of calls, with group calls just being many
private calls stacked together
Not the most convenient way to do business...

Yes, there are a few systems, but enough to justify the R&D of adding it? I doubt it. It would be much more logical for Uniden Europe (or whatever they are called) to foot the cost of development for it since it would be used much more there - just as Uniden America footed the bill for P25 and many other features. I bet they footed the bill for most of the current lineup which was of benefit to all the Uniden divisions. IOW, is everyone else benefiting from Uniden America's work? Or is Uniden Japan doing all the work for everyone and making decisions based upon sales figures as to whose want list gets priority?

MPT1327 would be nice, but the demand just isn't there in North America. There is much more demand for Open Sky (3 statewide systems at the peak), and that isn't happening either. Granted, OS is proprietary, and I *think* MPT is an open standard. Still, it likely costs money somewhere over and above the R&D costs.

Also, given the current economic conditions, I doubt there are many companies willing to put a lot of resources into something that most people could care less about and would never use. I think most of the systems in North America are in Canada, and I've never noticed that Canada is a big importer of any of the Uniden models. Sure, there are some users there, but I bet it's in the lower single digit percentages. In short, Uniden America is going to go with that gets them the most return on their investment, and sorry to say I bet MPT just isn't where that is.

I also understand that Uniden Europe isn't that responsive, but there is little Uniden America can do about that - especially if they have internal agreements to not intentionally "tramp on each other's toes". If Uniden Europe isn't responsive, write letters to Uniden Japan or ask them to include MPT. IF they see enough support, they should add it.

Well i am surprised at your response as bcTool was created for uk users and did we complain when you wanted us features added? No we did not we let it all go ahead as we were happy for it to work for everyone.

bcTool was created due to issues with another product. Those issues exist worldwide. If Rob Parker had an American division and a UK division, I would not argue that features that don't apply to the USA be included in his USA products. You also have to consider that there are more 'customers' in the USA than in Europe, and financially it made sense for him to cater to that market. When it comes to the scanners, the opposite is true. While there are many who want MPT support, it pales in comparison to the USA market who doesn't want to pay more for a feature that would be largely unused. Again, Uniden has a European division that caters to the European market.

Fact is that Uniden has at least three divisions all with scanner product responsibilities in different parts of the world. Each one I'm sure has profit statements, and I doubt Uniden USA wants to compromise theirs just to cater to worldwide markets. IOW, the return on the investment likely isn't enough to justify the costs.

Again, if you write to Uniden's HQ, and there is enough support, they should add it to their UK models (much like was done with Rob Parker adding features to his products which happen to be for models worldwide).

It's odd to hear other parts of the world demanding involvement from USA companies when many parts of the world want the USA to keep to ourselves more and attack us when we don't. Of course the UK is more civilized than some parts of the world. :-)

Proprietary. Likely Motorola would want too much to sell the format rights. Again, it's all about getting your money back from your investment, and a great example of how this isn't a UK vs USA issue.

There are many more OpenSky users in the USA, but that too is proprietary and may not provide enough return on the licensing investment. D-STAR is another popular format for the ham bands, but again same argument - you likely won't sell enough *additional* units to make the investment pay off. The bean counters would simply kill the feature in favor of a higher profit.

It's all about making money.

Melv,

There is a big difference between a radio system and software. As for MPT systems there probably isn't a state with more than 12 in the entire state, and none are public safety. It doesn't make sense for Uniden America to support a non-public safety system that some states don't even have at all. Unidens divisions each have their priorities, they have nothing to do with Rob or BCTool, Rob made the decision to have BCTool support across multiple versions of the Uniden scanner, for him it made sense as there was a market, free or not I'm sure the donations went up when he began supporting the US market.
Basically the MPT situation needs to be dealt with the Uniden divisions outside the US, the American market has no real use for it since very few businesses use it..... You want it on the Ausie or Euro scanners then complain to the appropriate divisions, complaing to Uniden America will just get ignored.

John

Joe i can see your point however we were not demanding anything just requesting. Uniden europe are nowhere to be found and do not wish to be contacted it seems. You have great support in the us we dont. I usually buy us spec unidens anyway as euro versions always lack something. Anyway i will say no more on the subject.

Joe,

You talk about OpenSky. One major potential user has actually backed out of the contract due to failures (New York State). I also hear about the shortcomings of the Milwaukee City OpenSky System a lot.

Do you know of any agency that has successfully deployed an OpenSky System?

I would love to have the ability to scan an OpenSky system, regardless. I would love to also see Uniden look into ProVoice since EDACS users have that option. In Iowa, we have users of ProVoice in the Des Moines Metro Area as well as some users to the north of Cedar Rapids. They utilize the RACOM system.

The only MPT system anywhere near here would be the Basin Electric Power Cooperative in North Dakota. They have a few sites in NW Iowa. With what you say about how many MPT systems there are nationwide, and the fact that none of them are really public safety-related.....I would certainly agree it is not worth Uniden USA's investing in research and development to equip a scanner with this trunking protocol.

Proprietary. Likely Motorola would want too much to sell the format rights. Again, it's all about getting your money back from your investment, and a great example of how this isn't a UK vs USA issue.

There are many more OpenSky users in the USA, but that too is proprietary and may not provide enough return on the licensing investment. D-STAR is another popular format for the ham bands, but again same argument - you likely won't sell enough *additional* units to make the investment pay off. The bean counters would simply kill the feature in favor of a higher profit.

It's all about making money.

From: Karl E. Simonson - KS9E
Topic: 350 Message: 350

One of the radio equipment manufacturers that is doing a large portion of MPT1327/1343 is TAIT. Tait is from New Zealand. Here in the USA Tait is becoming more popular due to their better audio quality and significantly lower cost than /\/\otorola. As for public safety use of MPT1327/1343 I know that Wood County Wisconsin was using that type of system. MPT1327/1343 is far more common in the utilities industries in the US and is also widely used in UK and Australia. You can read more about Tait at http://www.taitworld.com and check the news section for announcements of contract awards. Tait also manufactures equipment for other companies and "rebadges" them, one such example is some of the Kenwood radios.

Ok again you have valid points but I Must tell you this. Rob told me that the worst people for making donations were people in the us. I know he does not take it personally as he is too nice a man but thought i needed to clear up a point you made.

I know - that's why I said 'at their peak' previously. ;->

There is also a PA county that has made a demand that they be moved back to their old system.

Last I heard PA is looking for a scape goat to blame for that fiasco.

> Do you know of any agency that has successfully deployed an OpenSky System?

Frankly, no. Regardless, there is much more demand for OS than MPT in the USA. That was my only point.

And I understand and sympathize with your point.

But, the way to solve the problem is not by hiding the symptom. Get hold of Uniden Japan and complain to them. Start a letter writing campaign to tell them that you like their products and want to see MPT added to their products in the European/Australian market.

I can't say this enough - if enough people want the feature, and it's made beneficial to their bottom line, and they can get a license for the format, they should add any format.

Joe M.

MRI wrote:
> Joe i can see your point however we were not demanding anything just requesting. Uniden europe are nowhere to be found and do not wish to be contacted it seems. You have great support in the us we dont. I usually buy us spec unidens anyway as euro versions always lack something. Anyway i will say no more on the subject.

A little OT, but what brand of microwaves? We run Harris Constellations
and while they normally run between 50 and 80 degrees ambient temps,
we've had them run fine as low as 35 degrees in the site.

Mike

Sloppy install to start with, and not fixing it during maintenance,
gllobal
warming is a joke in my book, and it won't affect the system other than
needing better cooling in the summer. Kind of odd situation here with a
P16
statewide system last week where they had to put heaters at some
microwave
sites because they got too cold and failed.

Good explanation John. I have the same problem as Peter described and I
am
also hoping that the XT will do better. I have tried every digital
trunking
scanner on the market (RS 2096, 96 - Uniden 996, 396 - PSR 600, 500) and
had
mixed results with them all.

John, is the timing problem caused by sloppy maintenance, faulty design,
poor manufacturing or global warming?

357. ProScan Version 1.8.3 is out!

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-02-01 22:49:54 UTC
From: Bob Aune
Topic: 357 Message: 357

```
ProScan Version 1.8.3 is out!
-----------------------------

Changed the recorder from mono to stereo
Added an Audio Control tab showing a block diagram of the audio flow
with level indicators and volume controls.
RadioReference database import conforms to the RadioReference web
service version 3.1.
Added a RadioReference database search.
Added a direct frequency tune control to the DMA scanner types.
Added shortcuts to the recorder Play, Stop, and Next buttons.
Recorder shows the file playback in green.
Added a font selection to the display options.
Fixed a bug where the talk group logging hits was not updating
properly.

Many more improvements and small bug fixes.

ProScan is the most technology advanced Computer Aided Scanning
software that's feature rich with the friendliest user interface.

Try the 30 day fully functional trial and see for your self.

ProScan supports the BCD996T, BCT15, BCD396T, BR330T, BC796D, BC785D,
BC780XLT, BC296D, and the BC250D Scanners.

The utility in my area has gone P25 trunking & I'm looking for a 396T. Looking for a CLEAN (no dings, dents, scratches, scuffs, worn lettering), fully functional unit that's less than 2 years old. Prefer a unit in the original box with the original accessories. ARC396 / USB program cable a plus. Reasonably priced please.
Can pay via PayPal. Deal with confidence, check my eBay feedback:
http://myworld.ebay.com/rja1/

Also have lots of ham related stuff to trade, + or - cash depending on the trade. Contact me via e-mail: rja1@...

Regards,
Bob

Paul's radio collection AKA "The Uniden Museum of Radio Antiquities"

There would have to be one of everything Uniden has ever made surely?
What do you say Paul?

;)

Well, I had a "finger" in almost every scanner RS did from about 1985-2003.

Wrote most of the manuals 1985-1996, Managed the product development for them 1997-2001, Directed Product Development for them 2001-2003...but had a Product Manager that did the work. Sounds like a lot, but really was a very small part of what I did...as a PM I usually had 100-150 active development projects of which maybe 2 or 3 a year were scanners...as Director there were 400-600 active development projects at any particular time that were under my purvue.

I think the last scanner I purchased was a PRO-43, which I haven't turned on in a couple of years. I do not otherwise keep scanners around that are not work related (i.e. I never comp myselves with work samples...if I want something I buy it legitimately). That said, I have typically had a scanner around that I am working on in some capacity...but they go back on the shelf at work when I'm done with 'em.

Right now:
* I have a BCD996T set up in the car with a remote head.
* I have a BCD396XT in my laptop bag.
* I have something else I can't talk about.
I don't own any of them. Sometimes I think that they own me, however.

That's it.

OTOH, I have 2 bicycles, 2 guitars, 4 cameras, a Starbucks card, 3 sets of running shoes (that I should be wearing out a lot faster than I am), and too many computers. This list reflects more accurately what I typically want to be doing on the weekends.

Of course, now look at what I am doing this weekend.

Aha! So it's you we have to thank for those manuals!

What I'm curious about is that "something else" that you can't talk
about. My guess is a BCD996XT.

By the way, I really enjoyed your post:-)

I hope you did not write the Uniden898 manual (no malace intended), i luv my 898 , good thing i had a 895 and 245 so my 898 was no problem programming...I found out how to program the CChannel Only from Bob Grove site, thats pretty bad....PS: We are very lucky to have you around on these boards!!...In the old days on my Regency -Bearcat wood-grain scanner it had a "tone-bypass which by passed any high pitched voice also, i sent it to a tech in the lab in Indiana and he removed the by-pass circut, and sent it back...Good man like you....

Paul basically came on board with the development/release of the DMA scanners - starting with the BC246, I think. I doubt the two were directly related, but who knows... maybe they were (maybe DMA scanners were Paul's 'baby').

We actually have amassed a huge collection of both U.S. and European scanners with the goal of opening a scanner museum as Dave says. Because we are considering moving though to new space I'm just not sure when it will be open....but it will happen.

I am seeking for the collection the first computer-controlled scanner, Uniden's CompuScan (I believe it was called) that was controlled I think by a Commodore 64. Sorry to go off-topic here but as long as the opening was given I thought I would throw that out there in case anyone has one they would like to sell to be displayed in the museum or knows where I could find one. Thank you.

I outlined the basic idea for Uniden, then for GRE...both while I was at RS. However, nothing really got done until I came over to Uniden. I made the skeleton, but a bunch of really smart engineers actually put the flesh and muscles on and made it work.

Considering all the hype last year, I'm VERY disapointed at Uniden for at the VERY least announcing a release date. Instead, people who were 'holding out' for the XT are probably getting frustrated and looking elsewhere.

I would say if we don't have 5 mega wa...er...a release date of around mid-may, the XT is going to loose a lot of intetrest.

Why announce a product a year (or whatever it's been...) in advance, and only tease us with a product manual?

A year??? It hasn't been 6 months yet, which BTW is the normal time prior to release that Uniden makes an announcement, and considering they said it should be the 1st QUARTER of 2009 which, in their terms isn't even here yet and gone yet! So you'll just have to sit tight and stop whinning, at least until after the 1st Quarter is over or they make the release announcement. Of course since it was announced there has been one thing that could hold things up... the economy, who knows if or how it will affect things.

So just hold on, 1Q 09 isn't done yet!

John

I, for one, have a much different perspective on this. I think it's fantastic that we get as much information as we do before a product's release and have a direct line of communcation with the product manager for Uniden scanners. To be as well informed as we are (having feature comparisons, photos, AN OWNER'S MANUAL!) before the product is released to market makes us VERY well informed shoppers.

There could be dozens of reasons why certain details have not become public yet. Corporations have to have all of their ducks in a row before certain milestones can be achieved. Not to mention, in this economic climate, securing reliable supply chains can be difficult, too.

Sit back, relax, and keep your eye on your inbox. I'm sure you (and the rest of us) will know the moment something is able to be announced publicly, thanks to UPMan.

Q12009 is not over yet.

Me, I'd rather they just take their time and "get it right." I like knowing about it in advance, and I will be just as excited and interested when it gets here, however long that takes.

You should have gotten a Pro-106 during the December giveaway, er sale, so you'd have something to play with while you wait:-) (And, in my case, make me appreciate the 396XT all the more when it finally arrives.)

It looks like we finally have an announcement from Upman. Quote:

We expect to start shipping units out to our distributors the last week of March.

How long it takes to make it through the supply chain and into dealers hands is unknown...but usually just a couple of days.

All distributors will get the product at about the same time (we'll ship to all distributors simultaneously). I have no way of knowing which dealer will be first to have inventory.

You can stop hitting "REFRESH" now.

388. NAC on P25 (or P16) control channels

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-02-14 20:36:46 UTC
From: Dave
Topic: 388 Message: 388

Paul,

I did a search but did not see this. Will the XT display NAC on a P25 or P16 control channel? I know it should work on the voice channels just as it would on a conventional P25 signal.

The PRO-106/PSR-500 does this now.

Topic: 392 Message: 392

I finally bought an RH77 based on what everyone keeps saying about it.
I was using the radio-shack 800 MHz antenna.
I have to say that the RH77 is better by at least 3db on every band above 100 Mhz except 800 MHz.
On 800 the RS is about 3db, but not more than 3db, better.
I didn't test low band as I don't have any consistant traffic there but I did test Channel 2 TV audio and the RH77 is better there as well.

So if 800 MHz is where you hear most of your traffic, use the RS antenna, otherwise, the RH77 is definitely better.
http://www.radioshack.com/product/index.jsp?productId=2102525
http://www.universal-radio.com/catalog/hamantht/2368.html

I am using an MFJ mag mount as it allows the antennas to be used on the radio or on the car.

My guess would be the same, since they are basically the same scanner in terms of what your asking for. But thats just my opinion.

Bonus feature is the IF shift
Intermediate Frequency Exchange - changes the IF used for a selected frequency to help avoid image and other mixer-product interference on a frequency.

Why would you want that? Other scanners have more sensitivity but have intermod and overload issues in urban areas. When these other scanners are deaf, the 396 receives the signals fine. IOW, don't mess with what works.

Granted, if you're in a rural area the extra sensitivity would be nice, but not at the expense of usability in urban areas. Many people travel between the two areas and would rather have a scanner that works fair everywhere as opposed to only working in one environment and not all. The 396T is a good balance between the various environments.

True, but the start of Uniden's Q1 2009 (4/1) is.

All this guessing is irrelevant. I thought I read somewhere that it would be released next month. I think it was toward the latter part of the month, but it's getting very close regardless. I doubt it will be released in June.

I agree, but not the way you said.

Since the environment changes, so does the attenuation required. Having to adjust the attenuation 'on the fly' for 22,000 channels isn't too appealing to me.

I think the programmable attenuation should be global. You could have individual channel 'attenuation offsets' too add more or less per channel, but I would only want to change one setting when traveling into an urban area.

Why all the whining about it not being released yet and the end time on when Uniden would say it would be released is approaching. Uniden has already communicated a near exact date on when it would be released:

(From UPMan)
We expect to start shipping units out to our distributors the last week of March.

GPS will have no ability to control the attenuation (unless something
was added and not published).

But yea, that would be great if you could define 'attenuation heavy'
areas where it could automatically add or remove attenuation.

I would have to fully agree with Joseph McGinley's statement, and respectfully disagree with yours Joe M. I've always said, and always will say that the 396 if DEAF in the UHF band. I can not agree that increasing the sensitivity necessarily means decreasing the selectivity. My BC250D's receiver is as hot as all of my GREs to include the Pro-96, yet it does not seem to be susceptible to front end overload.

Dewey

Why would you want that? Other scanners have more sensitivity but have intermod and overload issues in urban areas. When these other scanners are deaf, the 396 receives the signals fine. IOW, don't mess with what works.

Granted, if you're in a rural area the extra sensitivity would be nice, but not at the expense of usability in urban areas. Many people travel between the two areas and would rather have a scanner that works fair everywhere as opposed to only working in one environment and not all.
The 396T is a good balance between the various environments.

That's only a two-step process, though. What I was talking about below is a 10-20 step attenuation that could be applied by the user on a global scale. IOW, rather than ATT on/off, it would be ATT -20 to +20 in say 2 or 4 dB steps. Each channel could have its own offset, too, so channels with little to no intermod could be +20 at all times while channels that are problems even in rural areas could be set to -20.

Many times, the 2-step ATT option is not adequate on some scanners. The ATT OFF overloads and the ATT ON doesn't have enough sensitivity. Hence my desire for user selectable attenuation steps.

I'm sure it's way too late for this in the XT, but it would be nice to see in the future in some upper tier models.

And I'll bring up a point I've made many times. How much of that 'betterness' (new word, I think) is due to the more efficient antenna system? The 296 has a much better ground plane to work with over the 396. This is particularly true on UHF where the radio itself is a quarter wave counterpoise to compliment the antenna.

I've noticed in general that scanner sensitivity has been on the decrease (all manufacturers, not just Uniden), but I'm not sure if it's due to the components used/available (compact multifunction components never seem to perform as well as discrete components), or other factors such as the aforementioned antenna inefficiency.

Part of the issue could be the size reduction for both of the above reasons. So, do you want it big and work a little better or small at the sacrifice of a little sensitivity? Personally, I've never noticed much difference in the scanners. There is some loss, but it's hardly what I would call 'deaf' on any band. Maybe some units have more of an issue than others.

To solve the antenna issue, pick up an antenna that doesn't require a groundplane.

In mobile use, I use a Sinclair 1482 which is a half wave that doesn't need a ground plane. I'm SURE they make portable antennas that are the same. It'd likely be larger (like, double)...but it would work great.

Good solution, but how many people would complain about the antenna that
is twice the height of the current stock one? How many would feel that
is a good trade-off for increased sensitivity? How many people would not
like the increased center of gravity (it's not as if the 396 isn't
already top-heavy with some larger antennas)? How many would pay the
extra $10 or so? And last, what are the odds Uniden would prefer to
leave that choice up to the consumer who can purchase an aftermarket
antenna if they feel the need for it?

All good points from a technical point of view,
but not always the best marketing solution.

Recently, I've been using a super-stubby antenna which seems to work
just as well on 800 MHz as the stock duck, and not too far off par from
any other antenna out there (again, at 800 MHz).

From: Terry (SC21)
Topic: 424 Message: 424

UPMan...

Will there be in this radio or ever any in Uniden radios, the support to be able to monitor LTR & EDACS frequencies and be able to obtain the LCN via simply monitoring the frequency?

This is a great feature on GREs and would love to see it on Unidens.

If you need a better explanation, please ask.

Thanks

Terry Weatherford, WX9SAR
IL/MO/MI Admin - RadioReference.com

MCH wrote:

That's only a two-step process, though. What I was talking about below is a 10-20 step attenuation that could be applied by the user on a global scale. IOW, rather than ATT on/off, it would be ATT -20 to +20 in
say 2 or 4 dB steps. Each channel could have its own offset, too, so channels with little to no intermod could be +20 at all times while channels that are problems even in rural areas could be set to -20.

Many times, the 2-step ATT option is not adequate on some scanners. The ATT OFF overloads and the ATT ON doesn't have enough sensitivity. Hence my desire for user selectable attenuation steps.

I'm sure it's way too late for this in the XT, but it would be nice to see in the future in some upper tier models.

For 800MHz, I picked up a Larsen 800MHz elevated feed dipole. Physically, its about 8 inches tall. A bit big yes, but the performance you get out of this sucker is incredible. In terms of its ability to catch distant RF, systems that wouldn't even decode with the stock antenna come in very usable (2 or 3 bars) with this.

It works "good enough" for the VHF and UHF needs I have as well.

From my experiance the 396T isn't deaf by any means, however you do need the right antenna. I use a RS 800 Mhz antenna on the road and it works wonders on the 800 but also on say 453 and 460's and still pulls in VHF High from 30+ miles away. I have received 800Mhz analog and digital systems on the same tower sites from 50 miles away with the little ole 800Mhz antenna in both clear aand stormy weather.

No. The way the technology is looking right now, it will be quite a while before it will be economical to incorporate TV audio into a non-TV product..

Or if the storing of multi tones on one freq has been sorted on search and store? This is a problem with the t version. That will be my deciding factor.

John yes it works for LTR & EDACS but he wants to find out the LCN's without programming in the whole system. Say if he only knew one frequency and held on it to get the LCN's from the scanner.

Terry have you tried the LTR analyzer program? May not work for what you need but try

Good question Terry!

It would be cool if you only entered the frequencies and the 396XT could decode their proper LCN position and store that. As an aside, in my GRE500 and RS106, only the LTR TGs that have traffic will reveal their LCN number...no traffic, just another frequency without a home.

If the 396XT CAN do this, it would mark a plus in the pro's column for me.....How about digital decode for LTR UPMan?....If not this model, future offerings?..... We need some hope. More and more LTR systems in Illinois are going digi.

Thanks!

Most LTR systems are already "known" so having that feature is kind of a wasted effort for Uniden, and as pointed out LTR Analyzer does the same thing, so again it really doesn't need to be a high priority for Uniden. LTR systems are getting fewer and fewer and the number of public safety users is dropping as well. I know of just one in Indiana that uses it and it's really useless for big incidents as that county learned the hard way. They have been investigateing other systems now to see whats going to work best for them and will dropping the LTR system as it is too limited for public safety. And thats another reason I doubt Uniden will waste research time on something thats just not used that much for public safety, and most scanner users don't use them for business monitoring. I do on occasion, but not enough to waste Unidens time, I'd prefer they work on more important things..... and thats a long list :)

In a LTR system, sometimes the displayed TG is not accurate information for determining the LCN because it's a
"go to" channel and not the "Home" channel. TG ID remains the same regardless of which LCN it's on.

With a EDACS system, I don't think the LCN # is broadcast, so I doubt if any scanner can determine that information.

I haven't used that function on my 396 but, we have a couple LTR companies that like to swap out frequencies periodically. It happens. Sometimes hearing the vendors and tow trucks is better than the local traffic report on AM radio or the State Police themselves. Tremendous source of infor about closures, accidents, arterial routes, etc.. We all have our own purposes I guess. But, I anxiously wait to here more from UPMan...who I sure is very busy this time of year.

90% of such mismatches are the result of a conventional system being set to AUTO when it should be set to FM. AUTO for most bands will select NFM, which is the current FCC band plan value. However, there are still many legacy systems that use FM.

Tuning into a conventional FM transmission with the scanner set to AUTO or NFM will result in the conventional channel's audio to be much louder than it should be.

That said, we have added a per-channel setting of -3 to +3db audio cut/boost.

Correct on both counts. LTR systems often send out a 'beacon' every X seconds that includes the channel number. The GRE scanners could (usually) decode this beacon to tell you the repeater number (LCN). The CWID will also contain the correct repeater number (LCN).

Do you have them programmed as the correct mode on the T? The most
common reason for this is having FM frequencies programmed as NFM or AUTO.

Yes, Joe, You are correct on that I used the words TG and frequencies too loosely and my explanation was way off. Point being...in some systems no data is taking place to indicate an LCN and that frequency sits wherever you programmed it. I can hardly wait for some promo ad that has all the official features prior to the release.

Huh? I didn't say anything about your choice of words.

As for the specs, look at the WIKI on RadioReference for a feature list.

444. Re: [BCD396XT] Re: LTR Capabilities

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-05 23:59:11 UTC
From: Mike Iszak
Topic: 424 Message: 444

Under what rock are you living sir?

LTR is *huge* and it isn't going away anytime soon.

To say "just run LTR Analyzer" is great, but that doesn't help the guy who's in the field trying to map out a system.

Up here in Toronto, there are a good number of LTR systems that are listed on RR, but there are a LOT that aren't, and a LOT that are incorrect.

It requires very little effort on Unidens part to have an LTR analyze mode...the idle bursts announce what home channels are free and what channels are busy...this is also transmitted on voice traffic. You could have even a slow system mapped in half an hour.

Subject: Re: [BCD396XT] Re: LTR Capabilities

Most LTR systems are already "known" so having that feature is kind of a
wasted effort for Uniden, and as pointed out LTR Analyzer does the same
thing, so again it really doesn't need to be a high priority for Uniden. LTR
systems are getting fewer and fewer and the number of public safety users is
dropping as well. I know of just one in Indiana that uses it and it's really
useless for big incidents as that county learned the hard way. They have
been investigateing other systems now to see whats going to work best for
them and will dropping the LTR system as it is too limited for public
safety. And thats another reason I doubt Uniden will waste research time on
something thats just not used that much for public safety, and most scanner
users don't use them for business monitoring. I do on occasion, but not
enough to waste Unidens time, I'd prefer they work on more important
things..... and thats a long list :)

I did change the mode from FMN to FM and that did help a bit. I
was thinking that FMN was ok, as there was no audio clipping. The 6db
adjustment range should make things perfect. Can't wait to get my hands on
one!

Thank you,
bob arenella

Sent: Thursday, March 05, 2009 3:36 PM
Subject: Re: [BCD396XT] 396XT Audio AGC

90% of such mismatches are the result of a conventional system being set to
AUTO when it should be set to FM. AUTO for most bands will select NFM, which
is the current FCC band plan value. However, there are still many legacy
systems that use FM.

Tuning into a conventional FM transmission with the scanner set to AUTO or
NFM will result in the conventional channel's audio to be much louder than
it should be.

That said, we have added a per-channel setting of -3 to +3db audio
cut/boost.

FWIW, on EDACS, the LCN is not broadcast on voice freqs, but it is on the control channel. The new GRE's will tell you what channel the control is if you "analyze" it. Not really an important feature, just something that's there.

Clayton

In a LTR system, sometimes the displayed TG is not accurate information for determining the LCN because it's a
"go to" channel and not the "Home" channel. TG ID remains the same regardless of which LCN it's on.

With a EDACS system, I don't think the LCN # is broadcast, so I doubt if any scanner can determine that information.

Topic: 424 Message: 448

First off be civil, I'm not under any rock. Second your in Canada, not in the US. Third I was talking about PUBLIC SAFETY using LTR. Even businesses though are dropping LTR due to reliability issues. Fourth, it may be "huge" in Canada but not around here. There are two systems within 50 miles..... Fifth, I'm sure your an expert on what it would take for Uniden to the requested feature to their scanners. As I said earlier there really isn't that big a market for it and knowing about design etc I don't think it would pay for them to add, and if it was easy as you said they would have added it long ago.

Yup I agree with you Mike Iszak. I think the rock he is living on is called United States or Canada ;)
Lots of sites isn't listed or logged yet. Just got back from my last cruise trip this year. Most of the LTR & Trunked systems wasn't even listed on RR. Like Guatemala, Nicaragua, Colombia, Aruba, Costa Rica, and Mexico still have many that isn't listed yet. 90% of trunked systems I found wasn't listed on RR.
If John looks around RR (outside of United States). He will notice some countries is still missing lots of info.

That's because nobody is volunteering the information.
If you know something that's not in RR, put it in RR.

Yup I agree with you Mike Iszak. I think the rock he is living on is called

United States or Canada ;)
Lots of sites isn't listed or logged yet. Just got back from my last cruise

trip this year. Most of the LTR & Trunked systems wasn't even listed on RR. Like Guatemala, Nicaragua, Colombia, Aruba, Costa Rica, and Mexico still have many that isn't listed yet. 90% of trunked systems I found wasn't listed on RR.
If John looks around RR (outside of United States). He will notice some countries is still missing lots of info.

Given Uniden's past attitude towards adding features, its very clear they don't care.

They refuse to add features they already have in other radios (IE, talkgroup voice type). The radio is already decoding the info in the idle bursts and the data on the voice channel anyway. It would take NOTHING to display it on the screen, or not require proper placement.

It isn't about if a feature is going to be used in a particular area...its that the capability is already there, they just choose to limit the abilities of their radio. I don't believe any excuses such as design limitations or memory because that simply isn't true!

Who cares about what other countries are doing, we are dealing the US and a lesser degree Canada which according to sales for the upcoming 396XT which is for the North American market, not South America.
And RR isn't the bible on scanning or scanners, much of the info there is wrong, and it's that way because they depend on site users to "give" them the info so they can sell it. Just because it isn't listed on RR doesn't mean it hasn't been figured out, you just need to know how and where to find it, and it aint rocket science if you do have to figure it out yourself. It took a 25 minutes to figure out the two systems in this area and guess what, RR was wrong on both!

In Southern Calif., there are several (and interesting) LTR systems that
ambulance services use. Plus business LTR
systems that are sometimes more interesting than public safety.
LTR-Analyzer is good for determining the proper LCN and displaying the TGs
but not much help for finding the actual frequencies.

Ah, you must be talking about how we didn't add Close Call DND, Fire Tone Out 30-second delay, etc as well as rebanding in the latest updates. ;)

To add a feature we have to balance implementation cost, technical feasibility, competitive issues, etc. We cannot do everything we want to do (sometimes for multiple reasons).

I typically cannot provide such detail for our reasoning as such intel is considered proprietary and confidential ...and on most days I do want to keep my job. :)

Hey Mike,
Why don't you climb all over Microsoft's back too. I mean, they don't offer free updates to the latest and greatest features. Heck no, those jerks only offer free fixes, but if you want the next version of Windows...why they actually make you PAY for it.

Every company has to make a decision between upgrading and selling new. Look at the car companies.....every year, a new model with new features. Course they're going down the tubes, but not because they don't give current owners all the new features for free.

Uniden is in business to make money. They have to keep happy customers to do so, but their main thrust (like all companies) is to make money. Decisions get made all the time, by every company, on what to sell new, and what to upgrade and what policies apply to do so.

Yea, there will be people like you who get angry, and maybe never buy another product from them, and there will be more who will pay the cost to get the new <whatever>. One presumes, the marketing folks know which will generate the bigger long term stability for the company...which means they make enought money to stay in business and keep improving things.

That's life....live with it.

Finding frequencies is part of the fun and if you have a little patience you can find them. I have two scanners that run 24/7 just looking for new frequencies. Both are logging all hits and I find a lot of supposedly dead frequencies are not so dead too.

Mike,

Again you don't seem to grasp things from a business standpoint or an engineering standpoint. What may work with one radio may not work on the next due to firmware conflicts or a 100 other things. Believe me Uniden cares and they listen, so does GRE, but scanners are not the one and only product these companies make either. Everything they affects the bottom line and today thats even tougher. Undien is taking a huge gamble right now even releasing the new scanner due the worlds economy. It could make or break the scanner line now.
The 396XT was made for a specific market, North America and certain things popular here may not be somewhere else. Scanners made for specific markets also have frequency differences, whats blocked here may not be blocked somewhere else and vice versa so taking your scanner to another country could possibly violate their laws. It's usually OK if you are an amature radio operator but even then it can get hairy.
Learn about business descisions and manufacturing though before saying that Uniden is refusing to add things they had in the past or that it would be simple to add something new, it isn't as easy to do as you think or would like and many things need considered..... and memory is just one of the many things to consider.

John

460. LTR in Chicago Area

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-06 21:08:25 UTC
From: dataman60435
Topic: 460 Message: 460

Here in the Chicago area (Carma Country) we are loaded with LTR systems as "Brian"-"Statevillian" spoke of, here in my city south of Chicago a vendor called ABEEP has many users one being "Life Star helo which is a medical chopper and also numerous ambulance companys...I have three banks on two scanners used up for this sevice...I guess its just the area your listening in.....One of the best features entered into today's scanners....

461. Re: [BCD396XT] LTR in Chicago Area

Topic: 460 Message: 461

It's not just "my area", even traveling around I have seen the number of LTR systems drop. One area has gone from 25 to ZERO LTR systems in the past 10 years. One went to Provoice, 7 to EDACs wide, 4 are out of business and the rest all went Motorola. Another area I go to regilarly has a grand total of 1 LTR system that serves that county and another out of 7 counties in the area and thats a business only service as the above 25 were too.

Simply put if your going to design a scanner your not going to add something that is 1: old and outdated 2: readily available on other scanners 3: losing more systems than they are installing 4: it would have to be cost effective and I could go on, but the fact is that from a business standpoint it wouldn't meet my requirements for inclusion in a new scanner, in fact I'd probably skip it altogether if it were LTR related..

John

Back to my original question..

Is or has Uniden considered this feature at all?

Thanks
Terry

PS... LTR is HUGE in the St Louis area, multiple companies with multiple systems on VHF, UHF, 800 & 900 MHz.

Radio Shack sells the 396 so I presume they'll sell the 396xt also. But you pay about a $100 premium over what online stores sell for, plus you'll probably have to pay sales tax locally.

Not yet. It hasn't been released and won't be for a few weeks or so.

Mainly that the 396 does P25 digital. There are likely a few other
differences, too, but I don't recall them offhand.

I beleive Upman already answered you on this.

You also keep ignoring the fact that most people don't buy scanners to
listen to business comms, and LTR is 99% business.

John

From: ScanIL
Topic: 424 Message: 471

Its a simple question and valid.

No need for the attitude.

Again, LTR is VERY popular in st louis & chicago.

One 800 MHz and three 900 MHz systems are used by EMS agencies in the st louis metro area. Also used by traffic helicopters and multiple security companies.

Chicago has even more usage.

It was just a simple question, I must have missed the response from "upman".

End of my discussion. Thanks to all that responded.

I beleive Upman already answered you on this.

You also keep ignoring the fact that most people don't buy scanners to
listen to business comms, and LTR is 99% business.

John

i would say universal radio.com or scannermaster. both are very good and reliable. you can try some of the ham radio catalogs. such as ham city, ham radio outlet. amatuer electronics supply, all have websites and sell little bit of everything. get there free catalogs to. i have seen it on the ham station, there good too. these are the ones i deal with and have not had any trouble.

Support: Uniden and the numerous forums and mailing lists
Parts: Uniden
Programming: Yourself - doesn't make sense to let someone else decide what you should listen to, and spending $500 + on a scanner I'd learn to program it too. It really isn't that tough to do, mostly common sense
Returns: Why? but then again just about any place you buy from takes returns

I sent an email to Communications Electronics in Michigan and this was the reply I received about pre-orders for the Uniden BCD396XT

Yes we will and you can enter your order now. Price should be the same as the current BCD396T scanner. Simply complete the order form with the new BCD396XT part number. In the comment section, enter that this is an advanced order for this new scanner.Visit www.usascan.com and click on "click to order" in the upper right hand side of the page.

477. Radio ID's and software

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-09 18:01:45 UTC
From: James
Topic: 477 Message: 477

I actually have two questions.

In an much earlier post I seen something about radio ID's on a GRe scanner. What is talking about here that when a dispatch center, on officer on a mobile or portable radio the Radio ID for that dispatch console, mobile or portable talks on a particlar talkgroup the ID of that radio be displaced on the screen. Example with the Illinois Starcom it would also display something like 29ddxxxx for for an ISP "M" dispatcher center and 200xxxx before an ISP "M" mobile? If so would this new 396XT have that capility now or every as a firmware update possible?

Another question I have is, will there be a free computer software program to the new 396XT offered by Uniden for computer program purposes and if so I take it that would also be released at the same time as the scanner itself?

478. Re: [BCD396XT] Radio ID's and software

From: johnstark
Topic: 477 Message: 478

If I figured out what your saying, no, the id's won't show on the screen, however that is already possible using software so no need to duplicate the effort.

As for the second question, I'd imagine something would be available, if not a lot of people will HAVE to learn to manual program :) , which they should learn anyway...

479. Re: [BCD396XT] Radio ID's and software

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-10 06:08:00 UTC
From: John
Topic: 477 Message: 479

That's a pretty lame answer.

Everything can be done on a computer, however the convenience of not having to carry a computer with a handheld scanner is what makes the handheld valuable.

GRE's method of identifying ids apparently isn't always accurate. You can expect that Uniden will roll out their ids when their method is more accurate than GRE's. For all we know it may have been sneaked into the intro firmware release of the 396XT.

Regardless, whenever id decoding happens with Uniden it will occur because a) a computer is currently needed for Uniden users to access ids and b) Uniden's major competitor already has this sometimes useful feature.

If everything that could be done on a computer didn't need to be duplicated in a handheld scanner we would not have features such as PL decode, dynamic memory, and numerous others that we now take for granted.

I believe Uniden will offer an "included in the price of the scanner" software program. However if its costing Uniden a ton of money (or driving up the price of development) id say ditch it, most people seem to use ARC or BCtool or FREESCAN anyway

FREESCAN has already announced it is BCD396XT compatible, and of course it is free. Im sure BCtool and ARC will follow shorty or when the scanner is released.

I have told Uniden in the forums that they are loosing some sales due to the lack of Radio ID's. For some people (not all) its a deciding factor in an otherwise tie vote (on which scanner to get).

Hopefully Uniden will come out with it as a surprise, or firmware update.

IF you have to have the ID's so bad then buy a GRE..... problem solved. I use the laptop at home and sometimes in the car, but I really don't need ID's when I am out working and so on.

The point is the Unidens and GRE's each have there good and bad points, but you never get the exact same features in both scanners, if you did then we'ed only have one maker and zero competition

John

Perhaps I'm just not quite "getting it" - but what use do people have for displaying radio IDs? Most people identify with their call sign when they key up and transmit anyway... When a dispatching centre keys up and says "dispatch to..." do you really also need to see the display say "dispatch"? I suppose if the scanner stops on it after the user has already announced their call sign.. so maybe that's the big use.

People who have loved ones serving find the radio ID very useful. You can set tones and led color alerts for a specific radio ID so if your wife keys up you won't miss what is happening.

I like the option of being able to see the users radio ID because some of the talkgroups use encryption some of the time or an agency will use a block of id's in a numerical range tied to a district or department and would like to see it on the XT series of radios.

487. Radio ID's on GRE-Uniden

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-10 18:12:33 UTC
From: dataman60435
Topic: 487 Message: 487

Personally i like seeing the Radio ID on the ILL ISP Starcom system on my GRE500 in lower right corner of the readout, the dispatch ID changes per user and each mobile has a Radio ID matching the car # ex: Trooper Car 574=Radio ID3557....Plus there are also prefix #'s that here on the list of Starcom info listed on www.carmachicago.com for the Starcom that give you a idea who is using the certain set of car radios....You can also "tag" a Radio ID so as when it becomes active the radio switches to it some what like "priority"...I sure hope this feature is included in the new Uniden 396XT as it is in my GRE500.....

They still use unit numbers so whats the difference? none, in fact the unit number is more stable than a radio ID, they all change at some point though.

Many times people don't use IDs or you pick up a series of transmissions without the beginning when they ID (if they ID).

It's nice to be able to see who is talking, and keep tabs on certain units over others.

1. I don't need the IDs 'so bad'. I was responding to your argument that a viable alternative was to carry a PC around with you. I find it ridiculous. Apparently, so do many other people.

2. You don't need the RID feature - GOOD FOR YOU. There are others who like it and could use it. This isn't a "John doesn't want it, so it's not needed" company we are purchasing from.

3. Close Call / Signal Stalker. Dynamic memory. SQKs/Scanlists. I could go on for a page with the shared features. The point is that there are features that will sell scanners. If someone doesn't have features, they WILL go to the competition, but is that really something you want to promote for Uniden? Maybe I want RIDs on a unit that has a better nearfield receiver (Close Call). Maybe I want it on a unit that has better dynamic memory management. Maybe I want it on a scanner that has FTO abilities. Maybe I want RIDs to work better than they do on the GREs (which are hit and miss in their design).

4. I guess you always scan trunk systems in ID SEARCH mode, don't you? After all, there is no reason to need talkgroups since you still hear everything and can get the TGs with external software. RIDs are useful for the exact same reason TGs are useful - to know who you're monitoring.

Sorry, but my solution would be to ADD it to Uniden's models, not suggest buying the competition. That's the fastest way to ensure you no longer have competition when only one company supports advanced features and refer everyone to GRE.

Joe M.

A great solution of you sit on one channel all the time. Most people use their scanners to scan channels. That means you won't always hear the voice ID at the beginning of the transmission. And with the RIDs some agencies are no longer using the voice IDs since they are no longer necessary. Some of my 'locals' even are using "State IDs" (fake) since everyone can see who is talking on the radio display. Yes, we have some real loose screws in some departments.

Speaking as someone who uses Motorola radios, the RID feature is great when it works correctly. To date, no scanner has the reliability the real radios have. I bet Uniden could duplicate that reliability.

I don't expect to see it in the XT, though - at least not for a while. I'm sure the feature set has been cast well into last year.

?????????? you make no sense Joe. And I know who voice is who, it doesn't take much to do that if you LISTEN. I don't need to look at the scanner to know what system, dispatcher or department it is, I can even ID many of the officers by name just hearing their voice, not just for my own county but the surrounding counties, even IMPD that has 1700+ cars and the state police of which I hear 6 posts on the statewide system. And I do that with 5 or 6 radios SCANNING all day and night.

I think your the one sitting on one channel Joe......

John

John,

PLEASE stop making excuses to not add features to the scanner lineup. Many of us want to see the Uniden scanners improve. RIDs are one thing that we who have them would like to see in the Uniden scanners.

I could program my Min Vs to any tone sets I want, but I still see the FTO feature as a valuable feature in the Uniden scanners. Yes, there are a lot of people who think it's silly, but many others rely on it for silent monitoring. Uniden knows that no everyone will use it, but it's a feature that is really useful in some circumstances.

If you know the voice of everyone in your state, great. I compliment you on your memory and recognition. Not everyone has your superior abilities. I guess you don't even need text tags on the channels, do you? Does that mean nobody should need them? That seems to be the argument you're making again... you don't need the feature, so nobody should need it.

Joe M.

?????????? you make no sense Joe. And I know who voice is who, it doesn't take much to do that if you LISTEN. I don't need to look at the scanner to know what system, dispatcher or department it is, I can even ID many of the officers by name just hearing their voice, not just for my own county but the surrounding counties, even IMPD that has 1700+ cars and the state police of which I hear 6 posts on the statewide system. And I do that with 5 or 6 radios SCANNING all day and night.

I think your the one sitting on one channel Joe......

It's the high road, not the high horse.

Regardless, I suppose the view is the same from your perspective.

Sorry if I missed the facts, but which points were they? That you should buy a GRE? That you should connect a PC to your scanner? The only fact I saw in the post I replied to is that each manufacturer has good and bad points. That's one that I will not dispute.

You're the one making the argument that if *you* don't need a feature, then nobody does, or they should buy the competition. Who is the one who needs to "grow up"?

Damn, I worked for a 1300 man department for 26 years and still could not recognize everone's voice.

You must have perfect pitch, perfect reception and photographic memory.

Or...you're fibbing.

Recognize some of them....sure, but to recognize a marority over multiple systems and multiple scanners....hard to believe.

I know it's off topic as we're discussing trunked RIDs but...

Actually yes, P25 conventional systems which have ASTRO signaling enabled as well as analogue conventional with MDC signaling do send RIDs with each transmission.

I have our XTS5k's setup using ASTRO and it works great, the ID of whichever radio is currently transmitting is displayed on the receiving radios' screen the whole time they're talking. If you have "Soft-ID" optioned radios you can even tag each RID with a more familiar name. We copy the trunking RID across for simplicity so calling a particular radio uses the same procedure on ASTRO as it does using i-call on a TRN.

MDC is completely different, but good to know about the RID possibility
on conventional P25.

I'm pretty sure MDC would take additional circuitry, but the P25 should
be software only since it's part of the decoded datastream.

From: dmccorm@charter.net
Topic: 477 Message: 503

It may not be easy to decode MDC on P25, but why couldn't it be done on an analog signal? MDC1200 looks to be a common feature for many agencies throughout the USA. The RID display and MDC decode would be a great feature addition on a Uniden DMA radio. If it can decode FTO, CTCSS, DCS, P25, EDACS, Motorola, iCall and LTR. How much more of a DSP would you need?

504. Re: [BCD396XT] RID's and MDC

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-11 12:34:19 UTC
From: MCH
Topic: 477 Message: 504

It's a matter of whether the chips used in the scanner will support MDC decode. I suspect they would/do not. That is the entire basis why I said I thought it would take different circuitry.

It's not that it cannot be done - it's a matter of using different components. Again, this is just educated speculation. I'm pretty sure the scanner is using chips for the decode rather than relying on the CPU for digital signal processing. So, you would be limited by what those chips give you to work with.

Further, I suspect the chips used cannot decode CTCSS/CDCSS vs P25 at the same time. I base this on the fact that enabling the CTCSS/CDCSS decode defeats the P25 decode in modes such as CC. You will further note that even in units such as the 996, the scanner cannot do both without changing the channel options. I'm hoping the XT might be different, but I suspect it may not be. I would like to see CTCSS/CDCSS and P25 decode (now to include NAC) ability both available for channels and CC hits. Again, if you read the manual the implication is that the scanner will not be able to decode CTCSS/CDCSS or NAC at the same time. <http://info.uniden.com/twiki/bin/view/UnidenMan4/EditChannel#Set_CTCSS_DCS> I don't see anything about SEARCH for CTCSS/CDCSS/NAC. It appears you have to first program the channel as analog or P25. Yes, it is possible to have all three at the same time, as GRE does it. BUT, they may use different chips that will support it.

Ideally, the scanner should be able to detect P25 signals and switch the decoder to NAC decode.

Disclaimer: For those who like to pick apart words, when I say "at the same time", I'm talking about the ability of the scanner to decode whichever mode applies to the received signal, and not requiring user selection of the mode. I know that you will never see CTCSS/CDCSS on a P25 signal. "At the same time" does not refer to simultaneous decode of both for the purposes of using that term above.

I haven't heard/seen any announcement about a 996XT, so it would be at least 6 months away. Maybe by that time the scanner will have 100,000 channels (and hopefully 1000 SQKs and 25 GQKs and 100 FTO slots). 8-]~~~~~~

Yikes! I can't even keep track of which system quick key I have assigned to the 3 or 4 dozen systems I have in my current 996. There's an old saying, "Less is more". I guess that doesn't apply when it comes to scanners!!

I use the method described in the files sections of the 396/996 groups.
I have no problems at all remembering 100 SQKs. Taking that to the next
level would be just as easy - adding regions as the first digit. I use
virtually all the SQKs in my 396, and the XT is going to have four times
the channel capacity. I'm just not sure how I'm going to be able to use
all those extra channels without more SQKs or duplication of SQKs and
using the lockout feature, but that wouldn't help scrolling through
systems. Even 200 SQKs would help.

I believe it has exactly that feature.. only with _7_ colors to choose
from. Looking at the reference doc at
http://info.uniden.com/twiki/pub/UnidenMan4/BCD396XT/BCD396XT_Complete_Reference.pdf

I see it down to the system level. If it goes down to the TG/Channel
level I missed it, but I thought that was the capability of the feature.

Additionals details are also available at:
http://wiki.radioreference.com/index.php/BCD396XT

Matt,

I had trouble finding it in the main document (usage) section. I was able to find reference to being able to set at the talkgroup level (page 247) via the PC protocol. I assume that means there's a way to do it manually.

I don't see anything the PC protocol to set color at the group level (page 244).

Sort of, it will do it but you have to program it to each TG yourself since the scanner doesn't know a fire TG from a PD TG etc. According to the manual you can also have it solid, flash slow or flash fast as well. Just plan on spending lots of time programming that function for every TG if you have any large systems.
I already have my "plan" partly figured out according to how I have set things up with Unitrunker and Pro96Com for other things.
Fire - Red (Dispatch Fast Flash, North & South Slow Flash) all others solid
Police- Blue - Disp solid, SWAT, Vice, Invest Fast Flash all others slow flash
EMS Dispatch fast flash all other solid
Streets/DOT yellow
DOC white
And still deciding the rest, but doing it similar to how Unitrunker and Pro96com are set up cuts out confusion when using those programs with the other scanners their assigned to. Now if Probe could only do the same thing.....

The programmable LED was one of the only things I miss about the GRE PSR500
I traded in for my 996T. There are many things I don't miss about the GRE
though, including the crippling overload. If Uniden releases a base scanner
with the multicolor back light, I would buy it in a heartbeat.

The 996 already has a multi-coloured backlight, although yes only red/amber and green.

Im sure the next version will have more colours.

By multicolor, I meant configurable on a per channel basis. If the 996 can
do that and I didn't know about it I would be happy.

Sorry my mistake. Nope it cant. I didnt know you wanted per channel.

Im sure we will see it in the next 996

I'm sure it's only a matter of time until a base version of the 396XT is
available.

It cannot. You can only set the BL color manually. It has no provision
to change it automatically without external SW.

I don't think there is a program yet, I just said I had my plan in place
when it is released. Basically I'm using the plan I used on other programs
to avoid confusion.
It will take a while to do all the systems I have in mind though :)

John

I haven't seen one. One of the other groups was talking about FreeScan supporting the XT already. There was another program mentioned, too, but I don't recall what it was. Maybe it was ScanControl.

Topic: 515 Message: 530

Joe is correct. FreeScan shows as xt compatible on their site.

Not sure how they tested it though... maybe they just assumed it will work or they got a loaner from Uniden

531. RH-96 Remote Head--will it work or not with the 396XT?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-18 18:12:43 UTC
From: Rick Short
Topic: 531 Message: 531

Good afternoon to the group:

I use the RH-96 remote head with one of my current BCD396T radio's and love it. With Scanner Master's announcement that they bought all the remaining stock of RH-96 remote heads and that Uniden was discontinuing it, I am assuming the RH-96 will NOT work with the soon to be released 396XT? Anybody know for sure and if that is the case any info on a remote head for the 396XT?

Thanks and looking forward to my preordered 396XT!!!

Rick

532. UASD Software?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-20 12:00:13 UTC
From: eaglecraftinc
Topic: 532 Message: 532

I am really comfortable and happy using the UASD for my 396T. If I step up to the 396XT will I be able to use the same software to quickly get the 396XT up and running or will I have to start from scratch and set up and learn a whole new program?

533. Re: [BCD396XT] UASD Software?

UASD will be delayed while we finish some details and testing. Meanwhile, though, there are going to be a couple of other alternatives available next week when the scanner ships.

I don't mind waiting but.....

My usd files that I use for my BCD996T's, BCD396T's, and BCT15's now contain over 34,000 frequencies and TGID's.

Please tell me that I won't have to re-type all of that.

Rich

I believe that FreeScan is one of the apps that will work, perhaps others (I'm sure the software authors will chip in).

Worst case, I think you'll be able to read the old format usd format with their software and write to the new scanner. Well, I suppose actually worst case would be to have to hand enter all that...but I don't think it will be that worst.

There are already enough conversion routes that you should not have to
retype any of it. If those routes aren't already available, I'm sure
they will be shortly after the release.

Just started FreeScan .8 and it has an import for UASD files and .MEM files (ARC?)

In the about, it lists compatibility with 346XT and 396XT.

Just "reading and passing along". <g>

Actually, I cheat a little.
I can make up file for almost any system in less than 10 minutes, depending on how verbose (Paul's word) I want to make the naming.

I use a fairly powerful text editor (X2) and make global changes.

But, recreating hundreds of files would be a major annoyance. Then I'd also have the problem of double maintenance any time I made a change to a file.

Rich

There is an alternative to hand typing everything.
Find a software package that will do both radios.
Load the old radio with everything you want, from the old software.
Read it with the new software. Now save it. Wasn't that easy.

I believe that FreeScan is one of the apps that will work, perhaps others (I'm sure the software authors will chip in).

Worst case, I think you'll be able to read the old format usd format with their software and write to the new scanner. Well, I suppose actually worst case would be to have to hand enter all that...but I don't think it will be that worst.

I don't mind waiting but..... ....

My usd files that I use for my BCD996T's, BCD396T's, and BCT15's now contain over 34,000 frequencies and TGID's.

Please tell me that I won't have to re-type all of that.

Read -> write is probably going to work (don't know, haven't tried it).

But I should point out that going from 396T to 396XT gets you a significant change in the ability to handle multiple site trunking systems.

On the 396T, you have to have each possible site as a separate system, and duplicate the talkgroups, manually enabling and disabling the systems or locking out control channels as you moved about town.

The 996T changed that - with its concept of one system that owns the talkgroups and multiple sites that can even be enabled automatically with an attached GPS.

From what I can tell, the 396XT has the same structure as the 996T in this area. So, you might very well want to cut/paste some of the information to consolidate multiple "systems" into a single system with multiple sites. I know I will.

Unless, of course, some software author wants to offer tools to facilitate consolidation and re-arrangement like this.

ProScan next version will support the BCD396XT and BC346XT scanners 100%.
Release date around mid April.

ProScan can import UASD files of all scanner types. Importing from a single site scanner (BCD396T) UASD file, the individual systems can be combined by dragging the site and group nodes to a system node.

The 30 day trial/demo is FULLY functional and no obligation to purchase.

And I was giving an option over copy-n-paste. :-)

So, there are already several options with more no doubt on the way.

Probably the most 'compatible' will be going from BCD996T to BCD396XT.

550. FreeScan problem trying to get ready for the BCD396XT (Was: UASD Software?)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-22 23:32:54 UTC
From: rbmcnamee
Topic: 550 Message: 550

Well, I thought I'd give FreeScan a try since I expect delivery of my BCD396XT 'very soon'.

However:

I was only able to import 53 of my intended 135 UASD system files.

At that point I get the following error message anytime I try to import another UASD system file.
"Critical error, cannot continue. Error code 9"

I suspect that FreeScan (ver .8) has some internal limit that I've reached. Maybe it doesn't know I'm setting up for the 396XT?

Any ideas?

Thanks,
Rich

396XT for sale on ebay

http://tinyurl.com/damkdo

Item # 280324930352

PLEASE NOTE...

There is much debate on RR if this is a scam since its not even released yet and the seller claims its released and "in her hand" (rather then just a pre-order shipping in a week or two)

On the other hand the seller has over 3400 positive feedback since 2001 (so not normally the typical low feedback scammer).

So Buyer Beware.. im not advocating buying it just sharing.

No such thing as grey market for the referenced models (UBC models are "gray market").
These models are only manufactured for sale in the US and Canada.

I can neither vouch for nor against the seller. Uniden does not have an "authorized dealer" program.

Marketplace Safety Tip

Marketplace Safety Tip

* Keep your money safe <http://pages.ebay.com/help/buy/payment.html>
- never pay for items with cash or instant money transfer services, such as
Western Union or MoneyGram. In the past some sellers have exploited these
payment methods in order to defraud buyers, so eBay has banned them from the
site.
* Received a Second Chance Offer email? Double check
<http://pages.ebay.com/help/buy/personal-offer.html> that it's genuine:
Second Chance Offer emails come directly from eBay and are shown in your My
Messages.
* Trade safely. Beware of anyone who contacts you about buying
<http://pages.ebay.com/help/policies/rfe-spam-non-ebay-sale.html> or
selling outside of eBay. When you trade outside of eBay, you're not able to
leave feedback or take advantage of protection programmes and case
resolution tools available on eBay. Report
<http://contact.ebay.com/ws/eBayISAPI.dll?ContactUs&wftype=3002> an
inappropriate email.

Learn More <http://pages.ebay.com/education/spooftutorial/index.html> to
protect yourself from spoof (fake) emails.

No such thing as grey market for the referenced models (UBC models are "gray market"). These models are only manufactured for sale in the US and Canada.

I can neither vouch for nor against the seller. Uniden does not have an "authorized dealer" program.

Are these grey market scanners? If they were to be sold in another country, I don't think UNIDEN will honor the warranty. I know for a fact that Icom USA will not honor the warranty on grey market items.

561. USB-to-Serial Adapter

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-24 04:31:34 UTC
From: Brian Hall
Topic: 561 Message: 561

What USB-to-Serial adapter/cable is recommended for controlling the BCD396XT from within Windows Vista? I'm actually running Windows 7 Beta 1 on my laptop and I do not have a serial port. I plan on using FreeSCAN to program my BCD396XT.

Thanks!

Brian Hall

Why not go to Uniden here ?
http://www.unidendirect.com/accdetail.cfm?item=USB-1
After spending close to $500.00, what's another $30.00 for something that you know will be compatible ?

Clark

I have used this
http://www.cyberguys.com/product-search/?keyword=usb+to+serial+adapter
On XP and Vista machines and it works perfectly. Not sure about Windows 7
as it's so new.

From: McGinley Joseph
Topic: 567 Message: 567

My 2 issues with the old model are the (tinny) sounding audio and the sensitivity issues especially on UHF.
Have eithjer issues been addressed?

I just placed my order this morning with Scanner Master. I've heard good things about them, and I hope I have a good experience. They seem pretty responsive through e-mail. I ordered my last scanner through Grove Enterprises years ago. Thought I'd give Scanner Master a try.

570. Pro-106 vs 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-24 15:25:10 UTC
From: mcginleyjoseph2000
Topic: 570 Message: 570

As i am about ready to upgrade from my current Pro-96 due to the traditional limitations of bank scanning, I was wondering if there were certain advantages to the 396xt dynamic memory feature versus the V-folder storage options of the 106.

First pics in the "wild" and youtube video (for those not on RR)

Comes with CD-ROM, however no printed manual (so a change from the 396T)

I actually like the V-folders. The problem is that they do not hold enough, so I prefer the x96's dynamic memory. My personal reason for the advantage of the V-folders is because you can turn entire areas on/off with V-folder technology. Sure GPS and startup keys work the same way, but I just like the concept of the V-folders. The V-folders on the 106 are larger than the V-folders on the 96, BUT, they still have a smaller storage area than what I want. As already said, I still prefer the dynamic memory. If someone could add V-folder technology to the dynamic memory, I would be in heaven!

In my experience the differences of memory are

The uniden can store a TON of systems memory without switching v-folders

The 106 however might be good for a traveller you can make each v-folder for a certain area and switch v-folders (rather then turning on and off a bunch of systems).

That being said the XT now comes with an enhanced system quick key to get to a certain system 9without having to turn everything else off)

The 106 is limited to 1,800 objects at one time, the uniden is 25,000 channels.

Other options.. the Uniden comes with AC adapter/PC cable. 106 does not. The Uniden is almost half the size.
On the 106 side its reported to have better digital audio, hot front end (to pull in weak signals - but also causes overloading in metro areas).

Not knocking V-Folders by any means, but here are a few I feel are advantages:

* All 25,000 channels are available all the time (vs only one VFolder setup at a time)
* Easily turn on/off up to 100 different systems/sites (vs 21 scannable objects at a time)
* Easily turn on/off 10 Channel-groups within each system (vs 21 scannable objects at a time)
* GPS Control of sites/systems/channel groups (vs only manual control)
* Startup Key reconfigures which systems are locked/unlocked (vs load a different VFolder)
* More closely matches the architecture of the systems you are wanting to monitor
* Direct and indirect support on the public newsgroups (vs indirect only)

I have both and my preference is Uniden. To me, the Uniden way is just more versatile .It just seems easier to access many systems as the scenario changes. Invariably , (with the PSR-500) I would find the system I wanted to add to my listening pleasure, to be in a different folder than the present active folder.

Yes, yes, yes - BIG advantages. I have a Pro-106 and also a BCD996T. Having dynamic memory is unbeatable for organizing your systems and having them all available at the touch of a key or two. You will love it!

My question is will the 396XT receive as well as the 106 (which is larger with more groundplane), and will the audio be as good as the 106.

I too am awaiting reports.

Just a "few" advantages? :)

Anyway, I agree that Uniden's methods for dealing with memory outshines GRE's. However, as the number of systems increases and system keys don't increase in proportion, some sort of memory partitioning would be nice.

Maybe some systems can be set to "global", while others are only visible with a specific partition. For me I would want to set partitions that are geographic in nature.

Say, common mutual aid is System 1 for me and always available regardless of which memory partition I am looking at. However some systems would be assigned to a specific partition. That way I could have two System 61's, but only one would be available depending on which partition I have enabled. Because System 1 would be global it would be available regardless of which partition I choose.

Basicially partitions would be another hierarchy level with the memory. Of course it would be dynamically sized, not limited like GRE's. Anyone that does not want to partition could set everything to Global.

I cant wait to buy a BCD396XT which was released recently but need to know when software will be available to program it preferably something I could transfer my 996 or 396 files to and upload them to the BCD396XT is there plans on a release date for BCD369XT UASD or is BUTEL releasing ARC396XT or any other freeware or software that will handle my needs for the BCD396XT because its needless to say I will not be buying one until there is some form of fully functional programming software.

Thanks for any answers,

Robert Klamp

when software will be available to program it preferably something I could
transfer my 996 or 396 files to and upload them to the BCD396XT is there plans
on a release date for BCD369XT UASD or is BUTEL releasing ARC396XT or any
other freeware or software that will handle my needs for the BCD396XT because its
needless to say I will not be buying one until there is some form of fully
functional programming software.

Thanks for any answers,

Robert Klamp

Robert,

Freescan is working with my new 396XT. It still has some bugs I need to report but it works.

I don't know about the speaker itself, but the audio does sound a little louder and clearer on my 396XT. You can also offset the volume on each channel for clarity.
I'm using it on a couple of air band frequencies now.

Actually, I think he is abbreviating his comments. I think that slash is supposed to take care of the word "or". I understood what he meant by it. Either they're getting their scanners today or will tomorrow.

I can understand the confusion, though. There's terminology and abbreviations some of the younger people use that even I don't understand. And I'm nearly 30. Then again, they kind of have to for text messages, tweets and the like.

591. Digital scanning in Aust

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-25 02:45:37 UTC
From: Wayne
Topic: 591 Message: 591

Hi All.

Not sure if there are any other members here from Aust but here's the bad news

This is straight from Uniden

They are talking pulling out of the Australian Digital scanner market and maybe the whole Australian scanner market all together because thier scanners are NOT selling here because we are such a paranoid country after 9/11 that we have encrypted every thing and any thing interesting worth listening to and we are not the country where it all started or happened to.....We` are just paying the price because some other people in another country far from and not even connected to Australia took thier eye off the ball and went to sleep at the wheel.....Thanks

So if you want whats left of the Aust digital scanner market i'd get in now because there is no garuntee that once they are all gone it's not for good.

My question is this

Will the USA scanners work in Aust I.E. do we use the same Apco standard as the USA or are we different as a lot of general comms users here in oz are going Apco 25 digital as well if not well looks like we are stuffed.

Regards
Wayne

Thanks Kris. I use an amplified Radio Shack speaker for mobile use so I might be able to overcome the audio issue. I do travel quite abit and switching v folders in my 96 has now become necessary even in my home state due to the addition of trunk systems.
I monitor several type II analog 800 systems in my area, how will the 396 do with sensitivity?

In my experience the differences of memory are

The uniden can store a TON of systems memory without switching v-folders

The 106 however might be good for a traveller you can make each v-folder for a certain area and switch v-folders (rather then turning on and off a bunch of systems).

That being said the XT now comes with an enhanced system quick key to get to a certain system 9without having to turn everything else off)

The 106 is limited to 1,800 objects at one time, the uniden is 25,000 channels.

Other options.. the Uniden comes with AC adapter/PC cable. 106 does not. The Uniden is almost half the size.
On the 106 side its reported to have better digital audio, hot front end (to pull in weak signals - but also causes overloading in metro areas).

They should work just fine for most applications. You can even change the frequency step as needed. Not sure about the trunking standards in AU, but there is also a custom table for trunking due to the Motorola trunked system rebanding in the USA.

One more programming concern. If I want to segment the channel groups lets say by county, can I include a mix of trunked and conventional systems in a specific group and have the ability to lockout these groups individually?

You can have multiple systems assigned to the same quick key. So, for example, if you wanted a regional fire group that included conventional, MOT, EDACS, LTR systems and just their fire channels, you could create the systems and assign them all to SQK 5. Now, pressing 5 while scanning will turn all those systems on/off with one button press.

Also, while Paul is the "Daddy" of the x96, I elaborate a little further concerning your question. Yes, you can lockout any level of the structure. Going from "Top" to "Bottom", you can lockout the System Key, locking out everything in that system or you can lock out individual systems assigned to the system key. At the next level, you can lock out one or more groups assigned to each system, and finally at the lowest level, you can lockout individual talkgroups/frequencies. So, again, yes, you can lockout what you wish.

Dewey

Now, pressing 5 while scanning will turn all those systems on/off with one button press.

When I lived in Chicago, I had the CFD VHF system, the O'Hare 800-MHz TRS and the Midway 470-MHz TRS on one key. Once I got over not having to deal with fixed banks, I realized I could put in the same system multiple times. Say, once for cops, once for fire. In the case above I had only the FD talkgroups in the trunked systems attached to that key.

At this point, this isn't really new - I've had my 396 for nearly 4 years.

I've been buying stuff from Rich at Scannermaster since at least 1987.
No complaints. Bought my 396 from him and expect to order my 396XT
from him this morning.

Well, I didn't have that problem. I used the web. I bought my scanner from Bearcat Warehouse just a few minutes ago. Reasonable enough price. Even added a USB cable since it is easier for me to use a USB connection with my laptop. We'll see, but I should have it in time for my 30th birthday if they ship same day. I'm excited, too!

Regardless, there are those who build somewhat of a connection with the people they buy things from. There's nothing wrong with that :-)

100 vs 21. Still seems like outshines is appropriate term to me. Maybe
you're right - maybe a better term might be 'dominates'. ;->

One of my complaints about both units is not enough SQKs/Scanlists.

I have been reading the first impressions at radio reference and it looks very promising. Audio GREAT according to one person whose opinion I always respect...DaveIN. Also, better digi decode apparently. There are 8 of us here in the Chicago and south suburb areas holding out on 2 things...audio improvement and P25 decode on 700Mhz trunked multi-path simulcast sites. We have a few here in and near Chicago and that has been one HUGE plus in the GRE500 Pro106 corner. But, if the 396XT can deliver on that front, Uniden can expect a lot of Chicago area purchases.

I am also impressed with UPMans resiliency and doing what he can on his end for the hobbyist. He deserves a lot of recognition for what he has done and continues to do. Thanks Paul!!!!!!

Which shop suggests BCD396XT for the best price (including shipping)?

http://www.bearcatwarehouse.com?

Their offer $485.90 + about $17 for UPS GND shipping.

Somewhere is more cheaply?

605. Software for 'XT? (Re: [BCD396XT] Re: Placed my order for one BCD396XT Scanner today!

Left a message earlier. Scanner Master doesn't actually have them in their hands, but they expect them tomorrow. I ordered one from them anyway, since I'm not that desperate. :-)

OK, so what software will work with these 'XTs? I dug around in the archives and couldn't find the message, but ISTR that there is no UASD quite yet.

BcTool's sole developer is swamped with actual paid work so is on hiatus.

What does that leave?

I never said Uniden's method for memory management was perfect.

There's room for Uniden to improve, whether its more system keys, some creative memory partitioning, or whatever. For example, think back to when we went from 10bankx10channel scanners to 10x100ch scanners. Obviously the 100ch banks overcame some problems but introduced others, thus the dynamic memory we now have.

Its a similar situation we have today with having so many systems but relatively few ways of organizing and accessing those systems. Some dynamic partitioning is one possible solution.

Regardless, Uniden's current memory management and accessibility outshines what GRE offers today.

John

Rich wasn't selling radios back then, just Scanner Master (the freq
guide). Also edited one section of Monitor America for him.

But no direct line. :)

Hey all!

My 396XT is on its way from CEI. I thought I'd drop a quick note for those keeping track on pricing.

$489.95 from CEI (www.usascan.com)

Frank

Now that's a good question. From the e-bill I got, it just lists that amount as being charged to my card. Keep in mind the radio is being sent to me via UPS ground. I'll update when I get the full bill tomorrow.

Pro96Com only supports P25? It won't display radio IDs on a 3600 baud
Motorola (Type II) system?

Also, just wanted to confirm that Pro96Com does currently support the 396XT.
I looked around a bit, but didn't find anything.

The paper I freelance for bought 5 396's and that paper won't buy much of anything, but they need the scanners to get the news, and I imagine thats the same at other papers and TV stations, even radio stations as well.

$30 UPS Ground

$60 UPS 2nd Day

$90 UPS Next Day

Personally, I find lowball prices with outrageous shipping offensive
and will avoid dealing with companies that do this. YMMV.

From: Rich Carlson
Topic: 621 Message: 636

Pro96Com works ONLY on 9600 baud P25 systems. It does nothing with
3600 baud systems. I think this is due not to the software but rather
that the Pro96 and other radios it was designed for only output data
from 9600 baud systems to the serial port. I don't know if the 396XT
or other future radios will support 3600 baud systems, but if they do
Pro96Com would have to be updated to accommodate it.

Pro96Com is supposed to support date decoding from the 396XT but I
haven't got mine yet so haven't tried.

That would make my price the lowest out there then. Right? If so, that's funny. I can't remember if it was this group, the 396T group, or RR forums, but when I mentioned mine was on order from them, they said CEI was usually higher than others.

You are correct. I was mistaken. I was looking at their page

http://www.usascan.com/files/ordering.html

which quotes $30.00 for ground UPS. I didn't see the product page
notation that shipping was included on the Uniden scanners.

My apology.

Dick

Read http://www.usascan.com/files/scanners.html. Besides saying "YOUR DELIVERED PRICE", it also says "Above prices on Bearcat scanners include $30.00 or $35.00 UPS Ground shipping/handling/insurance per scanner to a street address in the continental USA excluding Alaska."

Correct - PRO96COM currently only supports P25 systems. The author intends to add P15 (3600) systems, but has not done so yet (unless I missed it).

The reason is until the release of the GRE scanners, the only scanners with data output were the PRO-96 and PRO-2096 which only output P25 system data.

As soon as he 'figures out' P16 systems, he says he will add them to the program.

Last I checked (admittedly, a while) most of those required a
discriminator tap and would not support the direct data from such
scanners. So, the wheel was changed on the scanner end and PRO96COM
might be the only program that supports the "new wheel design".

Shipping from the US to Canada is always a pain, vendors really have no concept on the *actual* costs involved and the process requird. Most simply do not ship here at all. Those that charge rates of 60 for a scanner are certainly not ones I wish to do business with.

From: Troy
Topic: 591 Message: 649

US scanners will work fine in Australia. I have used both Uniden and GRE scanners here and have had no problems.

As to Uniden's response, I am not suprised. The market is so small in Australia, but the situation was never helped by Uniden being so unresponsive to customers. You only have to look at the updates for the 396... V1.15 or so in Australia and V3 for the US. The only thing Uniden Australia are worried about selling are phones and UHF CBs.

--- In BCD396XT@yahoogroups.com, <dmccorm@...> wrote:

650. BCD396XT - Analog vs. Digital and NB vs. WB and Step Sizes

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-27 18:59:07 UTC
From: Ken
Topic: 650 Message: 650

My last scanner was (is) the Uniden BC2500XLT. A lot has changed, obviously in the last many years. Does the new 396XT allow me to manually switch between:

Analog and Digital reception?

Narroband vs. Wideband reception?

Search steps (e.g. 6.25, 12.5, 25, etc.) and OTHER additional step sizes ... manually?

Just got the call that my Pre-ordered unit came in so expect to receive it in a couple of days (mostly due to the fact that today is Friday).

Really looking forward to it!

Where can I buy a good leather case (I mean GOOD) with the D-ring belt loop, etc. Where can I look for a decent assortment of types nowadays? I guess I'm asking who the larger distributors are for radio cases, and in particular the leather ones.

> Analog and Digital reception?

Yes and no. Digital reception switching is automatic, but you can program a channel to be analog only or digital only.

> Narroband vs. Wideband reception?

Yes.

> Search steps (e.g. 6.25, 12.5, 25, etc.) and OTHER additional step sizes ... manually?

Depends on what the 'others' are, but yes you can select the step size.

> Analog and Digital reception?

Automatic. If it sees P25, it demodulates it.

I'll let others answer the rest. Your big thing will be getting used to the memory structure. Repeat after me: "There are no banks, there are no empty channels". Go ahead. I'll wait. :-)

Yep. Got my radio and receipt right here. Technically, the radio is
$459.95 (+ $30 shipping).

659. UniTrunker

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-28 15:38:43 UTC
From: Frank Leidy
Topic: 659 Message: 659

Gang,

Not sure how ahead of the game I am, but I was trying to get the latest version of UniTrunker to work with the 396XT. I know I have the COM settings correct. I wrote a quick C# app to see if I could at least dump the data myself. I just have no idea how to interpret it.

Has anyone been able to get UniTrunker to work with a BCD396XT?

Thanks,
Frank

Pro96Com works, Freescan works, but no joy on UniTrunker.

UniTrunker is plugging away with the PSR500 however.

KB9, for get any reviews anytime soon. I don't know anyone who is will to risk a purchase that already own 396 classics because the multi path 700 P25 Moto trunked system does not perform optimally with any version of the 396 firmware thus far. If you have a 396 and a competitor scanner that does P25 trunked, you would see a huge difference in decode, clarity, and receiving TGs and conversations. BIG difference. Although I love all the new and different options, that whole new line up means nothing if the STARCOM system stays the same. Unless you decide to take one for the team and do your own report for the rest of us, you might as well put your feet up. You and I are in for a long wait.

I'm looking at the March, 2009 issue of Monitoring Times - they have the BCD396T (page 69) listed and they mention a "Suggested List Price of $799.95" When has that scanner ever been listed for that price? Uniden never posted it at that price! Perhaps I'm missing something.

The same should hold true for the 396XT.

You're reading it correctly. Virtually all products have an MSRP. Many times, the selling price will be below that. Sometimes, everyone sells it at the MSRP, and sometimes things are even sold above the MSRP - especially for rare or limited edition items.

This is nothing new - the BC250D (w/card), BC296D, and BCD396T were all about the same MSRP, too.

Joe M.

Paul Wolsko wrote:
> I'm looking at the March, 2009 issue of Monitoring Times - they have the BCD396T (page 69) listed and they mention a "Suggested List Price of $799.95" When has that scanner ever been listed for that price? Uniden never posted it at that price! Perhaps I'm missing something.

perform optimally with any version of the 396 firmware thus far. If you have a 396 and a competitor scanner that does P25 trunked, you would see a huge difference in decode, clarity, and receiving TGs and conversations. BIG difference. Although I love all the new and different options, that whole new line up means nothing if the STARCOM system stays the same. Unless you decide to take one for the team and do your own report for the rest of us, you might as well put your feet up. You and I are in for a long wait.

667. ID SEARCH display

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-29 18:05:14 UTC
From: Frank Leidy
Topic: 667 Message: 667

Everyone,

I noticed some oddities with the TG display in ID SEARCH mode on a 396XT. I guess I'm calling it odd because it doesn't match what my BCD396T does, nor can I find any info on it.

Some times there are two IDs displayed. Some of those times the two IDs are the same, and sometimes they are different. These are not I-CALL. They are valid TGs on the system.

Summit Count 800 (RRID 2707): (Type II SmartZone)
ID:32016 36848
ID:36848 36848
What's odd about this is that the county SO used to be on 32016. The county also dispatches some suburbs on 36848. A while back, the SO started appearing on 36848. Any SO unit calling has the top display. Any suburb unit has the bottom. These are the only double ID displays I've seen on this system.

Ohio MARCS Nimishillen (RRID 901): (Type II SmartZone OmniLink)
Same here. CANTON (17216) shows double IDs, but others don't.

What is this "special" display format? Is anyone else seeing this?

Thanks,
Frank

Im guessing patch ID? cool feature

The scanner displays a PATCH list IDs and received PATCH ID as "ID:xx-xxx yy-yyy".(xx-xxx : One of the PATCH list IDs, yy-yyy: received PATCH ID)

Example) EDACS PATCH ID: ID:01-012 00-002
MOT Type II: ID:42000 42016

*If the first PATCH list ID is already named, the scanner only displays that ID's name.

Definitely cool. The description you gave, did you find it somewhere or is
that your own write up?

Hell, I'm having a blast trying to get my head around control channel
decoding. Just when I think I have it, something new comes along.

I guess odd wasn't the right word. It certainly was different. I also
don't like the fact that a lot of things like it aren't fully documented
anywhere.

672. Control Channel Scanning

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-29 23:08:03 UTC
From: Brian Hall
Topic: 672 Message: 672

I'm still waiting for my BCD396XT, and in the meantime, I'm having fun programming stuff in to FreeSCAN. I've never had a scanner capable of scanning a trunked system on just the control channel. On RR, the system I'm following has a main control channel, and an alternate control channel. Should I program both frequencies into the system and select the Control Channel Only option in FreeSCAN? Will the BCD396XT search for any control channel signal on any of the programmed frequencies and follow the trunked system that way?

Thanks!

673. Does BC Tool software support the bcd396xt?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-29 22:39:50 UTC
From: professormoriarty1979
Topic: 673 Message: 673

Hi all,

My radio is on the way and I should get it by monday or tuesday from scannermaster. I hope this is not a dumb question, but I was just wondering if anyone knows if the bc tool software supports this radio model or not. According to the radio reference wiki it supported the classic model and it says that it does support the new xt; and that would be great. If anyone knows for sure let me know. thanks for any replies in advance.

According tot he website its NOT yet supported.
Last release seems to be from August 2008.

Im sure BCTool are coming out with an update (maybe needed to get some XT's in their hand first).

FreeScan is suppose to be xt compatible, however some users noted some problems (again probably due to needing a unit in hand first, the software was released before the XT was out and work out the bugs.

It does not. Rob, the author, is planning a major rewrite of the code on
a new platform, but it will be a while until it's ready. Rob has been
very busy due to his regular job and hasn't had time to work on bcTool.

Off hand I can't think of anything else that isn't documented. I think the documentation was much better this time around than prior scanners though from what I have seen.
Curious what else isn't documented?

679. RE: [BCD396XT] Re: Does BC Tool software support the bcd396xt?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-30 01:40:27 UTC
From: John Newell
Topic: 673 Message: 679

I have been using FreeScan with a new BCD396XT since Friday and have encountered a few glitchettes, nothing serious. (Example: 0.8b won't write the LED flashing alerts to the radio, it's either on or off. Not a dealbreaker and scheduled to be fixed in the next release, apparently.)

I contacted Butel; they say their software for the XT is not yet available. Regular 396t sofrware is inot compatible with the XT.

According tot he website its NOT yet supported.

Last release seems to be from August 2008.

Im sure BCTool are coming out with an update (maybe needed to get some XT's in their hand first).

FreeScan is suppose to be xt compatible, however some users noted some problems (again probably due to needing a unit in hand first, the software was released before the XT was out and work out the bugs.

I hope this is not a dumb question, but I was just wondering if anyone knows if the bc tool software supports this radio model or not. According to the radio reference wiki it supported the classic model and it says that it does support the new xt; and that would be great. If anyone knows for sure let me know. thanks for any replies in advance.

686. Prices - Table in Database section of this group

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-30 04:33:27 UTC
From: Brad
Topic: 686 Message: 686

I've added a table of the prices that I found online for the BCD396XT. It's strictly based on web searches. I can't vouch for the real prices nor for any of the sellers. It's just for information purposes. Group members can update any part of the table with new sellers, current prices. etc.

Brian,

Thats an easy one to set up, just use the red and blue CC channels for each site. The system is analog Mot type II. Where you may be having problems is that the system is rebanded so you may need to set up the tables for it. Someone on RR should be able to give you the correct table for it.

690. Re: [BCD396XT] Control Channel Scanning

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-30 15:38:15 UTC
From: J. Newell
Topic: 672 Message: 690

Three things here.

1. I assume that programming only control channels will materially speed the effective scan rate, since the voice channels aren't scanned.

2. I assume that the scanner has no way of knowing which programmed frequency is a control channel, so the solution is to program only control channels.

3. Hasn't it been true for quite a while that you only needed to program the control channels? In other words, this isn't a recent change in the Uniden scanners?

Thanks

John Newell

1. It will have no detectable affect on scan speed.
2. It only knows a system frequency is a control channel by detecting control channel data on the frequency.
3. Correct. Control channel only has been the norm for several years.

It's rare that I disagree with Paul, but on #1 if you're not in range of the trunk system, scanning say 20 channels would take longer than scanning 2 channels (looking for an active control channel), so I would say it could affect the scan speed. Even if it's not much of a difference, if this were true for several sites/systems, the difference could add up. Correct, Paul?

I would agree that as long as you're within range of the system, you should see no difference in scan speed.

Marginally detectable in that case (20 unreceivable frequencies will take about .2 seconds to scan vs. .02 seconds for 2 unreceivable channels).

Brian,

Thats an easy one to set up, just use the red and blue CC channels for each

site. The system is analog Mot type II. Where you may be having problems is
that the system is rebanded so you may need to set up the tables for it.
Someone on RR should be able to give you the correct table for it.

John

Yes, but you still have to program it correctly.

Assuming it is a "normal" rebanded system, you would program it as Motorola Type II 800 Custom and use the following band plan entries:

Band Plan Base Freq (Lower) Base Freq (Upper) Offset Polarity Spacing
1 851.025MHz 854.000MHz 440 + 25 kHz
2 851.0125MHz 868.9875MHz 0 + 25 kHz

Thanks for the valuable info. Where would I have found this? I don't see a nicely-printed user manual like I have seen for other Uniden scanners. Is it just not released yet? Does the BCD396XT not ship with an actual manual that contains the essentials. I appreciate the complete reference PDF, but it is a little overwhelming to find the information I need. I much prefer the abridged, easy-to-read, instructional user manual that I am accustomed to with other Uniden scanners.

Thanks!

First, I agree - many thanks.

Second, as an exclusive GRE/RS user for a decade, who has bought two Unidens this year, I want to say that while I have yet to find the perfect scanner (and this won't replace my PSR-600), the 396XT is a really impressive piece of engineering. Thank you!

Thanks, quick follow-up?

It looks like if you set "control channel only" for a site, you don't need to enter voice channels (duh) - p. 52 of the manual. If you don't set c-ch only, you need to enter the voice channels. Question:

What happens if you program the voice channels but set c-ch only?

Tks

I much prefer the abridged, easy-to-read, instructional user manual that I am accustomed to with other Uniden scanners.

Thanks!

Subject: Re: [BCD396XT] Control Channel Scanning

Yes, but you still have to program it correctly.

Assuming it is a "normal" rebanded system, you would program it as Motorola Type II 800 Custom and use the following band plan entries:

Band Plan Base Freq (Lower) Base Freq (Upper) Offset Polarity Spacing
1 851.025MHz 854.000MHz 440 + 25 kHz
2 851.0125MHz 868.9875MHz 0 + 25 kHz

Subject: Re: [BCD396XT] Control Channel Scanning

Brian,

Thats an easy one to set up, just use the red and blue CC channels for each

site. The system is analog Mot type II. Where you may be having problems is
that the system is rebanded so you may need to set up the tables for it.
Someone on RR should be able to give you the correct table for it.

John

Nothing bad...

Some people like to use the trunking activity indicators (and for that you need to have all system frequencies loaded). Also, it is very rare but still possible that a channel previously used only for voice will become an alternate control channel...and if it isn't programmed, the system would go quiet if you didn't have that system frequency programmed.

From: jefwaid
Topic: 702 Message: 702

Hi,

I am receiving my BCD396XT today according to UPS. I want to program at least one of my must have agencies tonight if possible. What is the best way to program it. I have attached the link to the digital system I want. It is Cobb County, GA.. I also want a local conventional system. Bartow County, GA.. Is Freescan the best way to go? Thanks in advance for any help. Digital is very new to me...

Thanks for the valuable info. Where would I have found this? I don't see a nicely-printed user manual like I have seen for other Uniden scanners. Is it just not released yet? Does the BCD396XT not ship with an actual manual that contains the essentials. I appreciate the complete reference PDF, but it is a little overwhelming to find the information I need. I much prefer the abridged, easy-to-read, instructional user manual that I am accustomed to with other Uniden scanners.

Thanks!

This exact senario happened here recently UpMan. MECA switched a CC to voice and vice versa. I think I was the only one around who had all the channels programmed so I didn't notice the change. I only do this for the MECA system and not the state wide SAFET system, for that I just have all the tower sites CC's and not all the voice channels.

It's under the "setting alerts" section which is part of the edit channel function.

.... choose one of backlight colors for the scanner to use for the alert light. Leave this option at Off if you don't want the scanner to flash an alert light. If you select a light color, the scanner prompts you to select the flash pattern (steady On, Slow Blink, or Fast Blink) you want to the alert light to use.

I haven't done it, I'm just forwarding what's in the on-line users manual.

I can't find anything on the CD owner's guide about how to set the backlight to flash, depending on the active channel, etc. I couldn't find anything in the scanner's menu system either. I'm missing something!

Or if you just bore into the menu, you set it as the alert(s) when you edit a channel. There are audio and LED alerts. Be advised that 0.8b Freescan does not yet fully implement this setting but the next version will.

I assume that the issue with the owner's manual was that because of the incredible number of options and settings in the scanner the manual has grown to ~270 pages, which would (1) add a lot of cost due to paper and printing expenses and (2) require a much bigger box. :D

Topic: 672 Message: 720

I am thinking that what I will do is program all channels but lock out the non-ccs and select "use cc only." If something goes dark, I will have the option to unlock the sites affected and determine what's changed.

This exact senario happened here recently UpMan. MECA switched a CC to voice and vice versa. I think I was the only one around who had all the channels programmed so I didn't notice the change. I only do this for the MECA system and not the state wide SAFET system, for that I just have all the tower sites CC's and not all the voice channels.

Nothing bad...

Some people like to use the trunking activity indicators (and for that you need to have all system frequencies loaded). Also, it is very rare but still possible that a channel previously used only for voice will become an alternate control channel...and if it isn't programmed, the system would go quiet if you didn't have that system frequency programmed.

Thanks, quick follow-up?

It looks like if you set "control channel only" for a site, you don't need to enter voice channels (duh) - p. 52 of the manual. If you don't set c-ch only, you need to enter the voice channels. Question:

What happens if you program the voice channels but set c-ch only?

Tks

1. It will have no detectable affect on scan speed.
2. It only knows a system frequency is a control channel by detecting
control channel data on the frequency.
3. Correct. Control channel only has been the norm for several years.

Are you *sure* they changed the channels, and didn't simply switch to an alternate control channel since there can be four control channels on a Motorola system/site and only one is active at any given time (facts which I know you well know).

I ask this since changing voice/control channel designations would require reprogramming of EVERY radio on the system, and the two channels in question could not be used until the process is done (since some radios would not have the new channel and the rest would not have the old channel), so this would not happen overnight on a system as large as MECA.

What it lacks in browsability it makes up for in searchability. You can use the search function to find things that might be hard to find in paper (especially since although there is a very detailed table of contents, there's no index :D) The manual is several notches above the usual stanard for scanners - kudos to Uniden.

From: MCH
Topic: 672 Message: 726

Same site/zone/simulcast system? (not sure of the system config)

Maybe it's to allow for another control/voice channel switch - they activate the new CC and run both while they reprogram all the radios - either adding the second one and/or removing the first, then when that is done they can shut off the one that has been removed from all the radios (or make it a voice channel). Is one of the CCs new to the system? Even if it's not new, they may make it co-primary so all the radios have access to it.

This isn't something such as one is in the 'rebanding' PS band and the other is in the NPSPAC band, is it? They could be simply reconfiguring the entire system.

Sent: Monday, March 30, 2009 7:38:54 PM
Subject: Re: [BCD396XT] Owner's Manual

I assume that the issue with the owner's manual was that because of the incredible number of options and settings in the scanner the manual has grown to ~270 pages, which would (1) add a lot of cost due to paper and printing expenses and (2) require a much bigger box. :D

From: johnstark
Topic: 672 Message: 728

No, it's been this way since day one last year. When the system came online they had two CC's running and it's still that way today. I had thought that maybe it was some sort of thing Motorola was trying due to the digital issues firefighters were having but I have found that isn't the case as they usually show up on the same CC the PD is on too. I hadn't heard of any system running two CC;s simultaneously before, but this one does. My best guess is that it is being used in cases of areas that have "iffy" reception of the CC.
They haven't rebanded the system, and from what I heard they won't be.

Topic: 707 Message: 729

I was going to say it makes making additions or changes easier as they can be changed as features or whatever change whereas you can't just reprint the manual. And a 4th.... one less manual to loose!

From: James F. Boehner, MD
Topic: 672 Message: 730

Quick question-

If you have two towers, one stronger (and first in the control frequency list), and always locked on first, is there a way to move to the other tower control frequency without locking out the stronger tower control frequency?

Sent: Monday, March 30, 2009 10:38:15 AM
Subject: Re: [BCD396XT] Control Channel Scanning

Three things here.

1. I assume that programming only control channels will materially speed the effective scan rate, since the voice channels aren't scanned.

2. I assume that the scanner has no way of knowing which programmed frequency is a control channel, so the solution is to program only control channels.

3. Hasn't it been true for quite a while that you only needed to program the control channels? In other words, this isn't a recent change in the Uniden scanners?

Thanks

Well, two sites should not be in the same list - they should be
programmed as separate sites (as they are).

But, I haven't found any way to manually switch towers yet. Did you try
simply turning the scroll knob? Well, I guess that would only work if
the System is programmed as described above, but reprogram it and try
the scroll control - it may 'jump sites'.

From: johnstark
Topic: 672 Message: 733

Actually thinking about it can't the two sites be given QK's to select and deselect them? That would probably be the simplest way to do it.

From: dmccorm@charter.net
Topic: 672 Message: 734

Other than a separate site, there would not be another way to do it. It would still track the first active control channel it hears. No provision in the firmware for the radio to look at the RSSI to determine which one to track.

735. Activity Indicators

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-31 12:27:21 UTC
From: dmccorm@charter.net
Topic: 672 Message: 735

I like the activity indicator feature and the method to select it as a display mode now. Now that there is an adequate amount of DMA it not so bad to actually have all the trunked frequencies in the system/site for Motorola and P25 systems. Anyone else using this feature?

736. Re: [BCD396XT] Control Channel Scanning

Yahoo group: BCD396XT (2008 — 2010)

From: Robert Mace
Topic: 672 Message: 736

I do not own one of these radios yet, but will buy one in the 3rd week of MAY...that is when Obama will send to my wife and I our $250.00 economic recovery payments. (we are both on SS as we are retired).

Anyway I was thinking that you might be able to make or mark the 2nd tower a "priority" tower which would make any action on it come up first.

But like I said I don't know if this can even be done or not, but it might be worth checking into.

Quick question-

If you have two towers, one stronger (and first in the control frequency list), and always locked on first, is there a way to move to the other tower

control frequency without locking out the stronger tower control frequency?

The only way I know to do this is to get out the plastic and buy another scanner, one on one tower and one on the other.

From: Uniden UPMan
Topic: 672 Message: 738

The scanner is only going to stop on the first control channel it can detect per site. With only one exception I am aware of, no site ever has more than one control channel active at a time. The correct way to select between multiple sites is to program each site (physical) as a site in the scanner. Then, you can assign each sites its own SQK or lock/unlock independently.

739. Order change

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-03-31 16:05:33 UTC
From: Brian Hall
Topic: 739 Message: 739

I ordered my BCD396XT from Scanner Master Tuesday, March 24. Two days later I got an e-mail asking for the three-digit code from my credit card. I e-mailed the code back to them immediately. Just yesterday (Monday, March 30), I got another e-mail asking for the code. I found out that the order hadn't even shipped yet. I e-mailed Scanner Master several times since the order asking for a confirmation and an updated status, but got no replies. After several days of delayed responses, I canceled my order with Scanner Master. I ordered this morning from CEI (www.usascan.com) for $489.95 (with shipping included), and hope to receive my BCD396XT by next week.

Scanner Master is out of stock now. That could be why the delay now.

Possibly in the time that they didnt have your 3 digit pin # (they cant process your order) they shipped all the remaining stock (I bet they are flying off the shelf).

I was worried as Im in Canada, I figured there would be a delay. I ordered from Scanner Master last week as well included my pin and it shipped the next morning. Couldnt be happier. I couldnt order from CEi due to the $60 shipping to Canada rate CEI charges.

Think on the bright side... CEI is cheaper for you anyway, so it all worked out.

Yes, they can - provided they are programmed as separate sites.

And I'm not sure who said it, but separate sites are always evaluated -
the 'first programmed' does not apply to separate sites. The scanner
will pick the first control channel from each site and evaluate it,
provided that site is enabled.

CCV, not PIN, but yeah - judging from how long it took to get through to them last week and the fact that they are OOS now flying is a good term.

Mine is in a silver trailer, probably on a flat car, somewhere between the UPS Hub in Chicago and here. Thursday, it will be in my hot little hands. :-)

(This was started on RadioReference, but roughly parallels recent discussions in this group, too.)

I think there are a couple of different modes of use:
1) Programming
2) Using

Programming is hard to document in a fixed format...every system programs differently, depending not only on the type of system but on the individual user's interests. Hard to boil programming down to a "one sheeter."

Using, on the other hand, could probably be boiled down to a one- or two-page quick reference (although certain things like SQK/GQK/SK/Channel Tags would vary by individual user).

So (and here's something else I could never do with a printed O/M) continue to discuss here, but if you get a good idea for something that should be included in a quick reference, go over to QuickReferenceInput < UnidenMan4 < TWiki and submit it. I've "seeded" the table with a few examples but don't have time to fully populate it right now. (If someone is updating the table, you'll get an error when you click EDIT on the table. Give them some time to finish, then try again.)

They are very good. There are times, especially like now when a new model just comes out, where their initial supply isn't enough to supply the initial orders and pre-orders. It may well have been in stock when you started your order process, but by the time you finished it, it might have been out of stock.

Give them a call, I'm sure they'll be happy to let you know when your order should ship.

Ordered from Scanner Master Wednesday, they got them in Friday and it
went into the UPS system that day. It's due here Thursday. Didn't
care to pay for faster delivery.

Paul and the rest,

Thanks for the responses. I have not looked into multi-site trunking yet, but with each site that is programmed, all can share the same talkgroups, or do they have to be copied to each programmed site? (i.e. each site a different system?)

As a specific, I am programming in the Palmetto 800 system in SC. I have several active sites in my area, many share the same talkgroups. I would also plan on having all sites programmed so that wherever in the state I go, I can have access to the PAL 800 system.

My apologies for the questions. I have not looked into this in detail with the manual.

The scanner is only going to stop on the first control channel it can detect per site. With only one exception I am aware of, no site ever has more than one control channel active at a time. The correct way to select between multiple sites is to program each site (physical) as a site in the scanner. Then, you can assign each sites its own SQK or lock/unlock independently.

I do not own one of these radios yet, but will buy one in the 3rd week of MAY...that is when Obama will send to my wife and I our $250.00 economic recovery payments. (we are both on SS as we are retired).

Anyway I was thinking that you might be able to make or mark the 2nd tower a "priority" tower which would make any action on it come up first.

But like I said I don't know if this can even be done or not, but it might be worth checking into.

Quick question-

If you have two towers, one stronger (and first in the control frequency list), and always locked on first, is there a way to move to the other tower

control frequency without locking out the stronger tower control frequency?

1. It will have no detectable affect on scan speed.
2. It only knows a system frequency is a control channel by detecting control channel data on the frequency.
3. Correct. Control channel only has been the norm for several years.

Three things here.

1. I assume that programming only control channels will materially speed the

effective scan rate, since the voice channels aren't scanned.

2. I assume that the scanner has no way of knowing which programmed frequency is a control channel, so the solution is to program only control channels.

3. Hasn't it been true for quite a while that you only needed to program the

control channels? In other words, this isn't a recent change in the Uniden scanners?

757. Custom Band Plans for Rebanded Motorola Trunked Systems

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-01 03:02:27 UTC
From: Brian Hall
Topic: 672 Message: 757

For the BCD396XT to be able to scan a re-banded system such as UCAN (http://www.radioreference.com/apps/db/?sid=601), do I need to program both of the so-called band plans below? What does the band plan do and why are two of them necessary? Do I need to enter these two band plans for all sites within the trunked system? Where can I learn more about this?

Attached is a screen capture of FreeSCAN for the system I'm programming. I entered the two band plans as specified and I would like to know if it is correct.

Thanks!

-----Original Message-----

To: BCD396XT@yahoogroups.com
Subject: Re: [BCD396XT] Control Channel Scanning

Yes, but you still have to program it correctly.

Assuming it is a "normal" rebanded system, you would program it as Motorola Type II 800 Custom and use the following band plan entries:

Band Plan Base Freq (Lower) Base Freq (Upper) Offset Polarity Spacing
1 851.025MHz 854.000MHz 440 + 25 kHz
2 851.0125MHz 868.9875MHz 0 + 25 kHz

Subject: Re: [BCD396XT] Control Channel Scanning

Brian,

Thats an easy one to set up, just use the red and blue CC channels for each

site. The system is analog Mot type II. Where you may be having problems is
that the system is rebanded so you may need to set up the tables for it.
Someone on RR should be able to give you the correct table for it.

All sites in a system use the same TGID's so you only need to enter an ID once. As long as the ID has affiliated with a site you will hear it.

If 4000 has affiliated with site A but not site B you will only hear it on site A, but if it is affiliated with both sites you will hear it on both sites.

John

I was thinking the exact same thing...

Of course, the 'new features' of the XT would be printed on the case and
wouldn't work, but for better audio... :-)

Any idea on availability of those, Paul? (XT cases)
I would also like to get a couple spare keypads.

Subject: [BCD396XT] Custom Band Plans for Rebanded Motorola Trunked Systems

For the BCD396XT to be able to scan a re-banded system such as UCAN (http://www.radioref erence.com/ apps/db/? sid=601), do I need to program both of the so-called band plans below? What does the band plan do and why are two of them necessary? Do I need to enter these two band plans for all sites within the trunked system? Where can I learn more about this?

Attached is a screen capture of FreeSCAN for the system I'm programming. I entered the two band plans as specified and I would like to know if it is correct.

Thanks!

Subject: Re: [BCD396XT] Control Channel Scanning

Yes, but you still have to program it correctly.

Assuming it is a "normal" rebanded system, you would program it as Motorola Type II 800 Custom and use the following band plan entries:

Band Plan Base Freq (Lower) Base Freq (Upper) Offset Polarity Spacing
1 851.025MHz 854.000MHz 440 + 25 kHz
2 851.0125MHz 868.9875MHz 0 + 25 kHz

Isn't the BCD306XT automatically "fixed" to handle the rebanding?

Brian,

Thats an easy one to set up, just use the red and blue CC channels for each

site. The system is analog Mot type II. Where you may be having problems is
that the system is rebanded so you may need to set up the tables for it.
Someone on RR should be able to give you the correct table for it.

Sounds like you're still thinking like a 396 instead of a 396XT owner .

Make each tower a site on the system .. you can control which one is active with lock outs and/or SQKs or GPS . and you can even scan both of them.

_____

Quick question-

If you have two towers, one stronger (and first in the control frequency list), and always locked on first, is there a way to move to the other tower control frequency without locking out the stronger tower control frequency?

1. It will have no detectable affect on scan speed.
2. It only knows a system frequency is a control channel by detecting control channel data on the frequency.
3. Correct. Control channel only has been the norm for several years.

Three things here.

1. I assume that programming only control channels will materially speed the effective scan rate, since the voice channels aren't scanned.

2. I assume that the scanner has no way of knowing which programmed frequency is a control channel, so the solution is to program only control channels.

3. Hasn't it been true for quite a while that you only needed to program the control channels? In other words, this isn't a recent change in the Uniden scanners?

Thanks

This is the thing I'm likely to have trouble with - the whole Site concept.

Does a Site contain multiple Systems, or is a Site like a System
except that it has multiple sets of frequencies assigned (with the
ability to geocode those sets)?

I know the general theory - you only need to have the TG IDs
programmed in once and (if GPS equipped), the radio listens for the
"correct" towers. In my 396T, I have each set of TG IDs duplicated
for each tower on the Oklahoma system (not every tower, just the ones
near me). Not nearly as elegant as Sites.

A Trunked System has:
* One or more sites (that have the system frequencies and other settings)
* zero or more channel groups (that include the TGIDs you want to scan)

Each tower, if it's using its own set of frequencies, is a separate
site. Think of the term site in it's literal meaning. With sites, you
only have to program the TG once.

A system can have multiple sites. If it was like an "Outline", the System would be at the top, with the Site(s) below it.

Clark

767. BC396XT and Freescan

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-01 22:17:16 UTC
From: crowemag55
Topic: 767 Message: 767

So I'm not ususally a Freescan user.. Not prejeduced against it, just glommed onto Butel's stuff a long time ago.

Got the XT yesterday, put a good charge on it, poked around and about 11pm decided what the heck, TV nights over, see if Freescan really can handle this new bugger.. Gotta say it worked like a champ! Went right to the Import feature and uploaded Plano, Allen and Collin County, TX, ran a quick test and started getting comms from each system.

Added a bunch more and all appear to be doing the right thing.

When I get home, I'll see if Freescan can handle the data from my ARC files so that I can match up my current BCD996T "plan"... Now THAT would be nice!

I'll let ya know.. Kudo's to the guy(s) at Freescan!!

John

769. P25 Low Pass Filter

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-02 02:38:36 UTC
From: Larry Koch
Topic: 672 Message: 769

Received my xt today.

Can anyone tell me what the P25 low pass filter does?

Thanks

Larry

Make sure you download the brand-new .8c version, which fixes (and very, very promptly) a bunch of issues. Very fast turnaround on a new version. Wish more people turned things around that fast...

Filters out high pitched data noise sometimes found on P25 systems.

772. Re: Control Channel Scanning

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-02 07:25:09 UTC
From: bigfella237
Topic: 672 Message: 772

An ever so slightly misleading statement Brian, each Motorola system PROGRAMMED INTO THE SCANNER can have up to 256 sites.

Each Motorola Omnilink TRN can only have a maximum of 189 sites as there are only 64 ports on each of the three zone controllers and three of those ports (one from each zone controller) are used for the Omnilink controller (you also need to deduct from that total any ports used for console interface units, telephone interconnect lines etc).

But I'm sure that's what you meant! ;-)

Actually, there was a tooling change (improved SPL by opening the speaker
grille) but the display area is the same.

That could be encrypted TGs that the GRE scanners try to decode. This is something completely different. I've never heard of a high pitched noise problem on the GREs.

This would only affect 'ringing' when you're actually hearing audio.

Regardless, it's probably something that wouldn't hurt having enabled.

I thought I'd read somewhere that the extra CPU usage may slow down the scan speed? I might be mis-remembering. =%^(

I haven't tried enabling it. I assume it doesn't get rid of that slight digital "burbble" effect that characterizes digital signals if you don't have a full-bore signal?

It actually gets the DSP up close to 100% utilization so can degrade P25 decode performance. Scan speed is unaffected.

OK, I got my 396XT yesterday!

Now is there any way to program it yet (without having to learn a new programming package)? I did confirm that I can't use the 396 or 996 UASD software to program it, and apparently Uniden has not released the UASD for it yet. So, I guess I have an almost $500 paperweight...

I have manually partially programmed the Motorola Trunked system that I administer for a living and it works, but I sure don't want to hand program the 4000 channels / TGs that I have in my 396T into the 396XT! I see a few things have changed from the 396 and 996 in how you program too...

I am very comfortable with the UASD software for the 396 and 996 and see no reason to change. I was forced to use BCTool for a 996 project and can't figure it out at all.

785. Problem BC396XT and Freescan Virtual Control Not Working?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-02 21:09:28 UTC
From: kenstark@bellsouth.net
Topic: 767 Message: 785

Can not get FreeSCAN Virtual Control and BC396XT to work together
But FreeSCAN Can and Does upload data from the same BC396XT and download new data to the BCD396XT indicating to me all communications settings are correct
BCD396XT will then ID Search or ID Scan on the new downloaded trunking data.

Setup is below

396XT
Connected to Com 1
- Bps 115200
- Data bits 8
- Parity None
- Stop bits 1
- Flow control: None
396 Powered On
SET to 115200
FressScann .8C
Select Control The Scanner
Virtual Control COM Port Sttings
COM Port Setup
COM PORT Settings
Start Auto
FreeSCAN has detected the scanner and is ready to operate with it
OK
Virtual Control Com Port Settings
COM: 1 SPEED 115200
Select: Windows-based
Start Virtual Control
Establishing
Can not establish

Am I doing something wrong?

Confirmed!

Freescan reads well from BCD396T, writes data to BCD396XT flawlessly!

Now just need to figure out to tweak the file to take advantage of the new features of the XT radio!

I did the same with my BCD996T; yes, it works very well, my new XT was programmed in a couple of minutes!

Exactly what I was trying to avoid - learning a new program...

However, after reading your message I did download Freescan and because of a major shortage of time (and the 396T not being with me) I just read the 396XT so I could play with the software for a few minutes before I had to leave work. After it downloaded all the pre-loaded systems and the one I had manually entered, I had about 60 seconds to play with freescan. I could work on the last downloaded system, but for the life of me, could not figure out how to look at or work on a different system. Remember that I had 60 seconds to figure it out, so I'm sure it's there. I'll download Freescan at home where I have my 396T, 996T and all the system files. When I have more than 60 seconds I expect to be able to figure it out... I just did not want to have to learn a different programming package.

To: BCD396XT@yahoogroups.com
Subject: [BCD396XT] Problem BC396XT and Freescan Virtual Control Not Working?

Can not get FreeSCAN Virtual Control and BC396XT to work together
But FreeSCAN Can and Does upload data from the same BC396XT and download new data to the BCD396XT indicating to me all communications settings are correct
BCD396XT will then ID Search or ID Scan on the new downloaded trunking data.

Setup is below

396XT
Connected to Com 1
- Bps 115200
- Data bits 8
- Parity None
- Stop bits 1
- Flow control: None
396 Powered On
SET to 115200
FressScann .8C
Select Control The Scanner
Virtual Control COM Port Sttings
COM Port Setup
COM PORT Settings
Start Auto
FreeSCAN has detected the scanner and is ready to operate with it
OK
Virtual Control Com Port Settings

COM: 1 SPEED 115200
Select: Windows-based
Start Virtual Control
Establishing
Can not establish

Am I doing something wrong?

Yup, did get the new version...

As it turned out didn't have time to mess with it much last night..
Hopefully tonight I can D/L the 996's data into Freescan and upload it into
the XT...

Well, I wrote that on my home from work (I take rail transit in case someone thinks I typed that while driving). After I got home, I downloaded FreeScan and installed it. I then did exactly the same thing that I had done at work - I read the new BCD396XT that had the preloaded systems and the one I had manually loaded. What a different result. Here at home I had a full list of the systems in the left panel - EXACTLY where I expected it to be! I have no idea why it was not there at work...

OK, so I am learning how to run this program...

Yup, did get the new version...

As it turned out didn't have time to mess with it much last night..
Hopefully tonight I can D/L the 996's data into Freescan and upload it into
the XT...

800. Fire Tone Out search

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-03 14:08:45 UTC
From: Jim Walls
Topic: 800 Message: 800

One of the features of the 396XT is Fire Tone Out search which is described briefly in Paul's original announcement of the scanner on this group (message 2):
> Fire Tone-Out Tone Search ☐ identifies tones used by
> agencies using two-tone paging for alert signaling

Has anyone figured out how to use this? There is nothing in the manual (such as it is), nor can I find anything in the scanner itself.

Jim Walls

Jim,

It's in the manual, and simple to use, just enter the frequency you want to use and leave the tone feilds blank, put it on tone out and wait for the tones.....
I suggest reading the manual 2 or 3 times at a minimum. This same exact thread was gone over last week as well and a quick search would have given the same answer.

804. 396XT with GPS and RH96

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-03 16:11:50 UTC
From: crowemag55
Topic: 804 Message: 804

So.. I guess my plans for using the 396XT with both the Remote Head AND GPS are pretty much out of the question since it only has the one comm port on it... I had wanted to take the 996t out of the GoldWing and put it in the large gaping hole in the dash of my car and use the hand held on the Wing.. (Hidden nicely away in the trunk).

If Uniden had just made that blank port on the front of the RH96 an actual port...

That's interesting Ken;
I'm still using the version I D/L'd on Tuesday night and VC is working.. I DID have a problem with it when I ran VC, stopped it and tried to come back with one of the other Interfaces... Restarted Freescan and it worked...

I D/L'd the data from the 996T last night, massaged it a bit to make it more human readable regarding SQK's and it uploaded into the XT just fine... Have a dupe of the 996T now!

I've seen mention (don't recall where, now...too many lists) of someone looking into making a box that would take 2 serial inputs and time-divide them....30 seconds on the RH port, 2 seconds on the GPS port or a similar ratio (would probably be OK at 60 seconds on the RH port and 2 seconds on GPS unless you are flying...).

I've had no issues with Freescan .8d. It seems to sometimes get confused about what port the radio is on and loses connectivity, but nothing that restarting the connection process doesn't fix.

I'd already downloaded my 396T load in preparation for my XT arriving and was able to quickly load it (after saving the preloaded systems). I have not disabled Freescan's Canadian Bias option but I'm hoping that doing so will disable the "Eh?" tail added to every transmission.

bcTool sees the radio as a 396XT, but won't play. There is a workaround involving connecting to a 'T then moving the cable, but I haven't tried that (bcTool's author is working for pay lately and hasn't had time to update for the new radios - but he is planning a ground-up rewrite).

What I'd like to see is a tutorial on building "sites". I have the same system programmed into my 'T several times, each with a different tower's control channels. Need a good step-by-step on how to convert that to a "Site".

Sites are pretty easy...as they model the "real world."

A site is a model of the tower itself...the frequencies, location (if desired), etc. In the T you entered site information...but at the "System" level since it only allowed one site to be entered per system. So, some of the System settings you are used to on the "T" get pushed down into site settings. The main settings are:
* Type
* Frequencies
* SQKs (since you'll want to be able to turn each site on or off independently)
* Alpha tag
* Location
If you have any site(s) in a system turned on, it will compare received channel grants on the site(s) with all enabled channels in that system. So, you don't have to enter channels multiple times to use them across several sites, anymore.

809. Unlocking or locking all systems

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-03 16:48:55 UTC
From: W4KRR
Topic: 809 Message: 809

Sometimes you want to start out scanning fresh, and it isn't always easy to remember which systems may have been locked out.

Is there a keypad sequence that will allow you to unlock all systems, or lock out all systems? I know that it can be done via software, but I can't find if it can be done directly on the scanner.

Ken

You can unlock everything (including custom and service searches) by pressing and holding L/O while scanning.
There is no key sequence available for locking everything, but if you use Startup Keys on all your systems and leave one Startup Key (like 0) unused, then you could lock all systems by holding "0" (or whatever the unused one is) while powering on the scanner.

To unlock all systems, sites, groups and channels: long press on the L/O key to display the prompt “Unlock All Systems?” - press [E / yes / gps] to unlock all data.

Freescan lists the site in the list of groups for a system. Looks
like you can just cut and paste the site "group" from each individual
system into the one system that you want to end up with. You can
then just delete the separate systems that you no longer need. I
just tried it and it worked without a problem. You'll probably want
to clean up the quick keys since the old data had them assigned to
the systems and they are now going to be assigned instead to the sites.

System 1 (QK 1)
Group 1
Site 1

System 2 (QK 2)
Group 1
Site 2

System 3 (QK 3)
Group 1
Site 3

Becomes

System 1
Group 1
Site 1 (QK 1)
Site 2 (QK 2)
Site 3 (QK 3)

I might add that this is for conventional freqs only. Doesn't help with trunked systems and their tones.

That's what I was looking for! You're right - very easy!

Thanks!

That would be swell since our FD is on a Type II and tones out over the system.

My thought was to program in all the system's voice channels and see
what it catches.

Trunked systems should not have tones since they have paging built into
the system via the control channel. Yes, I KNOW some do - I only said
they *should* not.

From: DMAScanning
Topic: 809 Message: 818

Paul,

It would be really great if one could use the Temporary L/O feature only with the keyboard lock on. That way if you bumped it accidentally the system would not be locked out permanently but the you lock out a channel that is problematic in a given location.

Thanks,
Don Griffey

Sometimes you want to start out scanning fresh, and it isn't
always easy to remember which systems may have been locked out.

Is there a keypad sequence that will allow you to unlock all
systems, or lock out all systems? I know that it can be done via
software, but I can't find if it can be done directly on the
scanner.

Ken

Hi, I want download version freescan 0.8d version, and the server indicates "forbidden access" to my computer. This is the firts time it occurs to me, using several computers. Maybe the server is closed to spanish users (I'm from Spain).
Can any one put this file at the files section?
Thank you in advance

Nope. If you need to enter a band plan for a P25 system, there is still an option to do so (for those 0.1% of systems that require it).

I am just confused then, I see the band plan, however on the 396T you just list the freqs the XT is asking for Low Freq and High freq.

Can you enlighten me a bit.

BTW, I love the XT it really does just about anything you want. Very, Very Pleased.

All very well and good, but they do.

IIRC, the 'T would search the ten channels you entered in FTO mode
even though the display never showed that. Is this still true for the
'XT?

Thanks Paul, that will help me out a bit.

Actually, using the Startup Keys is what prompted me to ask this. I decided to give the Startup Key feature a try, although I never used it on my 996's.

Let's say I have 30 systems programmed into my scanner. I normally scan about 8 of them. At times I only want to monitor one single system. So I give this system a Startup Key of "1". All other systems I give a Startup Key of "0". Now, when I power up the scanner while holding the "1" key, the one system I'm interested in comes on, all the others are locked out. This is exactly what I want. The problem is, when I turn the scanner off, and turn it back on again without holding any Startup Key, it is still scanning that same single system. I ASSumed it would revert back to the state it was in before activating the Startup Key. Now, all of my other systems are locked out, and I have to go back and manually unlock them when I want to resume scanning my 4 "usual" systems. Yes, I could hold the "0" key and thus unlock all of them, but that's not what I want either. And apparently you can't have overlapping systems with more than one Startup Key. Is this scenario accurate, or am I overlooking something? Suggestions?

Ken

If you are really wanting to just hold on and scan a single system, while on that system press HOLD for 2 seconds. It will flash HOLD in the display and scan that one system until you release it by pressing HOLD for 2 seconds again.

Your description of SK's is accurate. SKs are exclusive (can't be combined or overlap).

Popular question (just went through this on the main BCD396XT thread at RadioReference)
<paste>
If a group of tone-outs have the same RF frequency, attenuation, and modulation they will be "scanned" even on the XT. (Actually, it sits on that one frequency and cycles all matching slots through the display...when a tone-out occurs it checks against all matching slots for a match).</paste>

All very well and good, but they do.

IIRC, the 'T would search the ten channels you entered in FTO mode
even though the display never showed that. Is this still true for the
'XT?

If you are really wanting to just hold on and scan a single system, while on that system press HOLD for 2 seconds. It will flash HOLD in the display and scan that one system until you release it by pressing HOLD for 2 seconds again.

Your description of SK's is accurate. SKs are exclusive (can't be combined or overlap).

Subject: Re: [BCD396XT] Unlocking or locking all systems

Thanks Paul, that will help me out a bit.

Actually, using the Startup Keys is what prompted me to ask this. I decided to give the Startup Key feature a try, although I never used it on my 996's.

Let's say I have 30 systems programmed into my scanner. I normally scan about 8 of them. At times I only want to monitor one single system. So I give this system a Startup Key of "1". All other systems I give a Startup Key of "0". Now, when I power up the scanner while holding the "1" key, the one system I'm interested in comes on, all the others are locked out. This is exactly what I want. The problem is, when I turn the scanner off, and turn it back on again without holding any Startup Key, it is still scanning that same single system. I ASSumed it would revert back to the state it was in before activating the Startup Key. Now, all of my other systems are locked out, and I have to go back and manually unlock them when I want to resume scanning my 4 "usual" systems. Yes, I could hold the "0" key and thus unlock all of them, but that's not what I want either. And apparently you can't have overlapping systems with more than one Startup Key. Is this
scenario accurate, or am I overlooking something? Suggestions?

Ken

Subject: Re: [BCD396XT] Unlocking or locking all systems

You can unlock everything (including custom and service searches) by pressing and holding L/O while scanning.
There is no key sequence available for locking everything, but if you use Startup Keys on all your systems and leave one Startup Key (like 0) unused, then you could lock all systems by holding "0" (or whatever the unused one is) while powering on the scanner.

Subject: [BCD396XT] Unlocking or locking all systems

Sometimes you want to start out scanning fresh, and it isn't
always easy to remember which systems may have been locked out.

Is there a keypad sequence that will allow you to unlock all
systems, or lock out all systems? I know that it can be done via
software, but I can't find if it can be done directly on the
scanner.

Ah, that's right. Multiple sets of *tones* not multiple frequencies.

And here I thought I'd solved a problem! :-)

I tried this and it works pretty well. The problem with it is that the numbers 0-9 still work. I have my personal scanner on me up to 12 hours per day. During that time I may be driving or crawling around on the floor (we do a lot of that in the broadcast engineering business). With the temporary lockout, if you turn the scanner off and back on the temporarily L/Oed channel is restored but if you bump a numeric key and disable a SQK that SQK is not restored by powering the radio down and back up.

Still a really nice feature though.

Thanks,
Don, KE4JD

Subject: [BCD396XT] Feature request

Paul,

It would be really great if one could use the Temporary L/O feature only with the keyboard lock on. That way if you bumped it accidentally the system would not be locked out permanently but the you lock out a channel that is problematic in a given location.

Thanks,
Don Griffey

i just got my new 396xt today and i must say i am impressed

not only with how well the scanner works - but the ease with which the freescan works

i donated 6 canadian bucks for a great program

i highly encourage everyone who can to donate 5 bucks or something for a great free program

it took me 2-3 minutes to import my thousands and thousands of channels and tgids i had from my uasd files

i am going through the software now to learn all the ins and outs

but i dont really care if uasd comes out :-)

i dont know the guy who wrote it - but i am really impressed

uniden should just make a deal with the freescan guy - pay him lots of money and call it uasd hehe

nothing better than a new toy on a friday night and the wife and kids gone for the night

I highly doubt that the FreeSCAN server is limiting the attempt. Check your antivirus software or maybe your ISP is not liking his location (he IS in Canada).

As for putting it here, I'm not sure he want's versions spread around (he updates quite often and probably by the time it hits here, it would be out of date <g>).

It's a little over 2 meg file size so maybe email?

Thanks,

It does a com port discovery, finds the radio on the correct port, sets the speed then no matter what software interface I chose I get the same results after selecting Start Virtual Control. "Establishing" "Can not establish" ID: -1.

At least with freeSCAN I can upload and download to and from the radio. So I did not have to program it by hand. And freeSCAN can read ARC mem files, so I was able to use my 396T files after some adjustment. FreeSCAN imported my Mot Type II as an EDACS system, but that was easy enough to change within the software before I downloaded it through freeScan to the 396XT.

I even tried uninstalling freeSCAN and then re-installing it with the same results.

Eventually I will probable purchase software. I use this same computer to program and control 6 Scanners using ARC 250, ARC246, and ARC396 and one Amateur radio using its own software concurrently, and at time two other Amateur radios. Thinking that they may be interfering with freeSCAN I rebooted the computer and did not start any of the other radios and software up.

I believe that freeSCAN and the way this computer is setup by me, with only essential windows services running and other registry hacks to keep CPU utilization down may be conflicting with each other.

Some people have reported success by going to device manager and setting the baud rate on the COM port to what their scanners use. Might want to give that a try in case it works.

847. BCD396XT first look

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-04 19:49:02 UTC
From: Peter Laws
Topic: 847 Message: 847

Brown brought my BCD396XT from Scanner Master Thursday.

Naturally, the first Thursday is ham license testing night and, given that I am the team liaison, I couldn't get out of it. :-) Got done with the paperwork about 2100 or so and FINALLY got the box open.

If you have the 'T, the changes are evolutionary. If you don't have a 'T, you'll be astounded. :-) Only change in the case is the color and the speaker grille - much more open than the 'T. Wrist strap is longer, too.

I've been using UASD since the BCD396T came out and it was more than adequate to the task, IMHO. I use bcTool for logging. Before that, I was using AVC396 (which has some neat features for monitoring). The latter two would make a great combination, but alas ...

UASD isn't yet available, so I've had to use Freescan. Works OK, but I object to having to install Yet Another Software Package. Its logging lacks compared to bcTool, but it gets the job done and has allowed me to combine duplicate systems that differ only in tower info into "sites".

First thing I hit that confused me was the tone features. When I hit "E" on a conventional channel to play with tone settings ... there was no tone settings menu. Turns out that channels can be set to Analog, Digital, or All. Unless it's set to Analog, you don't see the tone menu. Interesting. On the 'T, you will never decode P25 if you are set to tone search anyway, and that's the same on the 'XT, so this is actually a logical thing.

I've been customizing the color stuff, mostly so my wife sees that it's different. :-) Got it set to white by default, green when close-call hits. I've used the "alert" feature to have fire alarm channels turn it red and police dispatch channels turn it blue.

Yes, I'm listening to cops again. Like the BC780XLT, the BCD396XT supports "negative delay". Set the coppers to -10 and you get just enough information to decide whether to reach over and hit HOLD.

Unfortunately, for trunked systems, which is 90% of what I listen to, it seems you can only set that delay value for the entire system and not just an individual TGID. Booo.

Close call is a little different now. I was a little surprised that when I sit in the kitchen CC hits on 162.400. The transmitter isn't very close by, which is a bit of a concern. I did figure out that I could explicitly filter out NOAA Weather Radio, so that took care of

that.

Until it stopped there again.

Turns out that you can set CC to automagically add what it finds to a separate system. Pretty handy and, as far as I can tell, it can be disabled.

The display has multiple configurations. I haven't played with the band scope or trunking activity, but I do have it set to show me the freq or TGID below the alpha tag. You can set those TGIDs to show the actual hex notation instead of the Uniden-style decimal.

Have not played with any of the GPS features and probably won't since my usual car GPS (a Garmin Nuvi) has only a USB connection, not the RS232 that the 'XT needs. I may be able to rig up something with my older GPS-V, but it's not a priority for me.

Not a lot of P25 here, but TIK has some 400 MHz conventional stuff. By my brief listening, signals sound pretty smooth, but that's pretty subjective - have yet to do a side-by-side with the 'T. Need to see if I can find the NAC.

Also need to figure out how to send the control channel data out the audio port.

So far, so good.

Are you by chance using USB 2 Serial cables? I think we're seeing more and more issues with them not being as reliable as a real serial port. I understand with all those radios hanging off a single computer, it's hard to find that many serial ports. I have a couple of Moxa multiple serial port boards that have proven themselves to me and they weren't very "pricey" when I got them a few years ago.

Not trying to "sell" you on anything, we've just seen a fellow go through similar trials and got a serial card and all his issues vanished. (this was on scannow.org)

Thanks for the thought.

Computer:
COM Port 1 Bit per second 115200, Data Bits 8, Parity None, Stop Bits 1, Flow Control None,

FreeSCAN: Auto Detects of Scanner
COM: 1 SPEED 115200
Establish
Can not Establish
ID: -1

But, as stated before,
FreeSCAN: can Upload or Download with no errors even though it can not establish control of the radio. Leading me to believe that the problem is not at the the "physical level" wire/interconnect, or the "link level" handshaking/link establishment.

I also have a BCD396T connected to my computer. FreeSCAN can detect it on
COM: 9
Speed 115200
Establish
Can not establish
ID: -1

But if I use ARC396 I have no problem connecting, controlling 396T

I also have a BC246T connected to this same computer, FreeSCANN can detect it on
COM: 4 SPEED: 57600
Establish
Can not establish

ID: -1

But if I use ARC246 I have no problem connecting, controlling 396T

Can not establish

ID: -1

This leads me to further believe that FreeSCAN needs something in services that I have turned off, or some windows code, that I have turned off or not installed.
I am running XP SP2 with no windows updates other then netframes .net

By the way, I also have another BC246T, connected to this computer, and a BC796, BC296D, and a BC250T to their own respective ports running their own respective ARC software.

As stated before, I will have to wait for ARC396XT software so that I can have computer control of the BCD396XT. I will use FreeSCAN for downloads until that time. And can not

recommend the software to my friends because of my problems, and no way to identify the cause.

Thanks.......and Keep Safe!

Some people have reported success by going to device manager and setting the baud rate on the COM port to what their scanners use. Might want to give that a try in case it works.

Thanks for all your continued thoughts on this problem

BCD396XT is on com port 1.
Thinking the same as you I shut down the computer,
turned off all the radios,
Rebooted
The only radio active was the BCD396XT and FreeSCAN
Same problem

Now if FreeSCAN is having problems that are related to these other com ports with nothing attached to them then I would suspect there is something wrong in the way FreeSCAN is looking at and or making use of the com ports, especially since ARC has no problem with the com ports. Being ARC does not support the XT as yet, and there is no other software available that supports the XT, I am not 100% positive that it is just a FreeSCAN problem.

I also find that FreeSCAN takes a lot of time to find the the correct com port and speed of the radio, no matter which radio it attempts to find. While ARC seems to have a faster com port and radio identification algorithm.

Please do not get me wrong, ARC has its own issues, but thankfully for me these issues do not preclude me from running multiple radios in my environment.

Two scenarios I have not tried:
 Both would be to take down the entire USB network, by disconnecting the USB HUB the radios are hung off of. Rebooting with only com 1 being connected and active. - Trying FreeSan with my 396T and then 395=6XT.
If this should work, it would still lead me to point to FreeSCAN as being faulty, as it should be designed to work with as many USB Hubs as USB 2.0 and Windows XP support. Further it would be useless to me if it could not work with my USB network of radios, so I have no plans to even try such.

Thanks.......and Keep Safe!

I was having a similar problem with Freescan not operating properly in the virtual scanner mode and with the uploads/downloads being intermittently problematic. I had been using the Uniden USB cable and I also tried a third party Serial to USB converter. Yesterday I installed a two port serial card and all of my problems have been resolved. In fact, I opened two instances of Freescan last night and left them both running in virtual scanner mode--one with my 246T and the other with my 396XT. They ran all night, logged all the hits and are still running without a problem. I realize that your problem may not be caused by the same thing as mine, but thought this info might be helpful.

You're brave. You're a Service Pack and about 100 patches behind.
Yikes. Maybe someone else "owns" your serial port.

I've been having intermittent problems just as you describe. A reset
of the program has done the trick so far, not even a reboot.

My laptop has a real serial port - does your system have a real serial
port or are you using a USB converter?

A couple things you can try. Do you go striaght to virtual control when you start? or upload/download first? Also if you open up device manager, click on com port's properties, goto port settings, then advanced, then lower the UART buffer settings down that can help as well.

856. ProScan 2.0.0 Is Out With BCD39XT And BC346XT Support

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-05 13:54:43 UTC
From: Bob Aune
Topic: 856 Message: 856

I just released the latest ProScan now with BCD396XT and BC346XT support.

ProScan implements near 100% of the scanners capabilities including Jump Tuning, Number Tag Tuning, Control Channel Data Stream Output, etc.

ProScan database layout resembles the scanner's many options in a tabbed format for an overall picture of the scanner menu design.

The 30 day trial / demo is fully functional.

Enjoy,
Bob

Yes I am Brave and Stupid. But that has not stopped me from running like this for years.

This is a Desk Top computer with COM 1 being a physical RS232 system board port.
"DMA Scanner Finder" continues to tell me that it see's COM 1 and access is not denied when the BCD396XT is not powered on. When I power the XT on, DMA Scanner Finder tells me what DMA RADIO in this case it finds attached to COM 1, the BCD396XT. Also other information it has acquired from the radio. While at the same time it tells me that access is being denied to my other ports, which is correct because they are being used to connect to other Uniden Scanners using ARC software. When I shut those other radios off, DMA Scanner tells me those ports are available.

Thanks.....and Keep Safe!

859. Freescan lockup

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-05 02:40:33 UTC
From: Larry Koch
Topic: 767 Message: 859

I think I've discovered a way to get freescan to lockup.

Right mouse click to add a new system. When the drop-down box to select the new system type was displayed, I toggled to another windows session. When I toggled back to freescan it went to the main page and wouldn't return to the drop-down box. I never did find the drop-down box so I ended up killing the session. I can duplicate the problem.

Thanks for your input!

Glad you got yours resolved to your satisfaction. I have no plans to add additional hardware to the computer to resolve a software issue.

I run a program called "DMA Scanner Finder" that you can find on the internet.
It goes out and checks every com port on ones computer for connected DMA scanners that are attached, powered on and not being accessed by software.

It tells me almost immediately that the PORT is COM 1,
that access is not denied,
that the radio model is BCD396XT,
that the BAUDRATE is 115200,
that the FIRMWARE is Version 1.04.04,
The RADIOS ESN,
and the check sum.
It also tells me COM4,5,7,8,9,10,11 are denied access because they are being used.

There is no justifiable reason that I can come up with why this does not work with FreeSCAN in my environment.

No doubt I will try this when Uniden's Software is available for the XT. If Paul is reading this and would like me to beta test the software in my environment, I would be more then happy to try such.

Thanks.......and Keep Safe!

They ran all night, logged all the hits and are still running without a problem. I realize that your problem may not be caused by the same thing as mine, but thought this info might be helpful.

Have you shared your problem with Assaf, the author of Freescan on scannow.org?

He's been very responsive to problems.

I'll offer a suggestion to help you determine if it is a software problem or something else.

As far as I know, there are only 2 software programs that support the BCD396XT. Freescan and ProScan. ProScan is not free software, but you can download a 30 day full function demo/trial. I suggest you try it. In minutes you should be able to verify if the problem has something to do with your PC setup. This is the program I use and it works perfectly for me.

http://www.proscan.org/

After looking over this thread I found 2 bugs.

1. Turning on and off the virtual control several times can sometimes lead to it not being able to connect. (an internal counter doesn't get reset)
2. Com Ports higher then 9 with certain system configurations leave FreeSCAN unable to connect.

Both of these will be fixed in the next version. (0.8E)

From: JAN FINE
Topic: 865 Message: 865

I had the same problem with Freescan. I changed Com 4 to Com 1 and then it worked fine.

Have you guys tried Proscan?

Just downloaded it today. Parts of it have a learning curve but I love it.
Recording, easy upload and download once you figure out how to do it. Logging tones and freqs for conventional, Logging talkgroups and trunked system name. Works as if I have a windows version of Probe software combined with the new scanner features. 30 day free trial. Full version. Make sure you click on Help and look at the manual.

Haven't got the database working yet other than uploads and downloads to and from the scanner.

Virtual control works fine.

Subject: Re: [BCD396XT] Re: Problem BC396XT and Freescan Virtual Control Not Working?

It seems to be with any com port 10 and above for me my radio is on com port
10.

In a message dated 4/4/2009 9:23:39 P.M. Eastern Daylight Time,
kenstark@... writes:

Thanks for the thought.

Computer:
COM Port 1 Bit per second 115200, Data Bits 8, Parity None, Stop Bits 1,
Flow Control None,

FreeSCAN: Auto Detects of Scanner
COM: 1 SPEED 115200
Establish
Can not Establish
ID: -1

But, as stated before,
FreeSCAN: can Upload or Download with no errors even though it can not
establish
control of the radio. Leading me to believe that the problem is not at the
the "physical level" wire/interconnect, or the "link level"
handshaking/control of the radio

I also have a BCD396T connected to my computer. FreeSCAN can detect it on
COM: 9

Speed 115200
Establish
Can not establish
ID: -1

But if I use ARC396 I have no problem connecting, controlling 396T

I also have a BC246T connected to this same computer, FreeSCANN can detect it on
COM: 4 SPEED: 57600
Establish
Can not establish

ID: -1

But if I use ARC246 I have no problem connecting, controlling 396T

Can not establish

ID: -1

This leads me to further believe that FreeSCAN needs something in services that I have turned off, or some windows code, that I have turned off or not installed.
I am running XP SP2 with no windows updates other then netframes .net

By the way, I also have another BC246T, connected to this computer, and a BC796, BC296D, and a BC250T to their own respective ports running their own respective ARC software.

As stated before, I will have to wait for ARC396XT software so that I can have computer control of the BCD396XT. I will use FreeSCAN for downloads until that time. And can not recommend the software to my friends because of my problems, and no way to identify the cause.

Thanks......Thanks......<WBR>.a

Some people have reported success by going to device manager and setting the baud rate on the COM port to what their scanners use. Might want to give that a try in case it works.

I've used ProScan for a while now. I love it. I use the remote capabilities to stream my "normal" stuff so I can hear it at work. Can't get crap from my cube.

I took Bob up on his offer on the RR forums to help test the 396XT version. Been using it for a few days now. It was very easy to transfer my config from my 396T to the XT.

I highly recommend this software.

And not only that it supports about 11 different scanners, even though another company is still selling individual programs for each individual scanner. The worst part is people are still buying it. Wake up people. ProScan supports 11 Uniden scanners, ScanControl supports about 15 Uniden scanners and 4 GRE Scanners all from the same program. If you don't want to buy there is that wonderful Freescan, and bcTool. Did I say wake up people.

I haven't noticed that. With 15 on my XT, the 'black box' is very 'seeable'. Mine likes setting 9 for the best balance.

871. Printed Manual

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-05 23:56:53 UTC
From: jb853
Topic: 871 Message: 871

From everything I can see, the manual is only web-based; the CD that comes with the radio is in the same format. I would find it quite helpful if it were also posted as a PDF on the Uniden website so it could be printed in its entirety as opposed to having to go to every topic and print it separately. Does anyone else have the same concern?

Perhaps someone from uniden will read this.

872. Re: [BCD396XT] Printed Manual

Paul is the Uniden man so he'll see it. I, too, would like a
traditional manual.

There is a PDF on the CD. Had mine printed at Kinkos yesterday about 13 bucks with the binding.

Yes. I too have this concern. I have been asking about it since I received my XT a week ago, but no one else seemed concerned about it. For a brand new user like myself, it has been a steep learning curve with the materials supplied on the CD and on Uniden's site.

It is in the ARTICLES folder on the CD. It seems complete, but that is tough to know for sure. Everything I have referenced to date is covered. The Tone Out Search was a little tough but I just did not completely understand it.

880. Freescan Issues with the XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-06 00:53:46 UTC
From: bearcat
Topic: 880 Message: 880

I have already reported these on the Freescan forum, but thought folks might like to be aware of these two issues or better yet confirm them.

When you download a MOT Type I system it is changed to MOT Type II during the download. It appears to upload TYPE I systems just fine.

The APCO Band Plan which is used to track IMPLICIT trunked systems downloads fine but does not upload back to the radio.

881. Priority ID Scan

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-06 01:06:53 UTC
From: Frank Leidy
Topic: 881 Message: 881

Priority ID Scan is the best feature ever. I've two channels that I'm listening to using this. Meanwhile, I'm holding on another channel. The held channel stays and when either of the priority channels is active, I'm right there.

I honestly don't know who to thank more. Motorola for implementing the subaudible? My local county for using the feature Motorola created on select channels? Uniden for adding the feature to the radio?

Heck, thanks to all three!!

Frank

Reply to self. I just realized that if no audio is on the current channel that I'm hold on, it is monitoring the control channel. See manual page 144.

At least I can thank Uniden for the feature. Jury still out on whether the system is using priority feature. Looks like I'll have to monitor the CC data overnight.

You are correct mine is the Complete Ref also. I never really thought of the User Guide and Complete Reference as being different. I guess they are.

I like the Complete Reference lots of good stuff.

I guess we are still waiting for the User Guide in PDF.

I retract my original email.

The scanner will only 'evaluate' the priority channels when there is no current voice traffic (IOW, when it's decoding the control channel).

Not according to the manual.

From page 144:
Motorola system can receive priority IDs while the scanner is on the voice channel. However, for this to work, the channel must also be assigned as a priority channel by the radio system (otherwise, the TGID will never be sent on the voice channel's low-speed data).

That information is even available when dumping the control channel data stream. From Page 122:
[MOT Subaudio]
MOT,<id>
<id> = ID (Hex 4 digit, 16 bits)

For example:
MOT,D110

At least one of my local systems is sending data over the voice channel. I can't remember which one.

Personally I would like a printed manual, I got one with my 996 and my 396, hmm! you'd think the 396xt would be a buck or two cheaper, guess you can't have it all for the same money.
Which reminds me computers are the cheapest they have ever been laptops too, and you can buy a $12.00 SW\FM\AM radio that will listen to things all over the world, toasters, kettles for under 20 bucks, microwaves for under 100, TVs, DVDs, must be more involved in making a scanner, I guess.

890. ICalls on the XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-06 03:05:46 UTC
From: bearcat
Topic: 890 Message: 890

I searched the archives and did not find anything.

The user guide appears to indicate that ICALLS are now set by just adding a
TG ID as .0 (period zero) for wildcard Icalls.

That entry turns them on, I assume.

There is no longer a menu choice to turn them ON.

I cannot find any menu choices for ICALLs

Is that correct?

Rich

A lot more involved in a scanner, wider coverage, means more circutry. Also licensing for protocols etc from Motorola and so forth, circuitry for FTO, DCS etc... R&D, it all adds up.... feel lucky the price of the XT's didn't jump $50 to $100 to cover some of the design changes etc.

Keep in mind that the wildcard is only needed for ID Scan, it's automatic for ID Search. If you use the HEX id display you only need to enter "." for the iCall wildcard, it will fill in the rest for you.

i dont want to start a off topic thread, so i ll do it this way

can any one summarize for me , if you can, what the difference between the 2 radios is?

 i am seeing if i need to spend 500 for another radio or if i can make my bc396t last another 5 years

  I remember the bc235 xt vs the bc245xt i had to make that switch to get EDACS radio capability, but am not sure if i need to do that again ,, i really like my 396xt i just want to see the differences between the 2 radios

thanks in advance

The big differences are the BC396xt does UHF Military Aircraft and Digital. The BC346xt does not.

I'm seeing a problem with the write back to the radio also.
It is mixing some of the trunked system freqs and talkgroups.
It mixes some of the trunked system freqs into conventional systems.
It misses some of the talkgroups in the trunked system that were in the database. But the recording and history functions are great. Worth the $50. I'm sure they will iron out the read and write to the BC346xt. Also haven't been able to import a database from Radioreference.com. Probably just trying to be the first one out with purchased software.

I have done stress tress with USB converters on this end and haven't seen any data corruption issues. I'll have to develop some more test to try to simulate the bugs.
Can you provide a screen shot of the trunking frequencies in the conventional system or better yet provide a copy of the database file.

Whats not working with the RadioReference database. Is it after the connect button is pressed?

I've been using it extensively. I find it is is easy to use and it works perfectly for me. I can both upload and download to/from the scanner. I can maintain my systems easily. It has a very nice interface to the RadioReference database.

Clarification for the thread:

We are working on implementing a PDF export feature for the web. It will allow the web site to be exported as a viewable/printable PDF. However, since the content will be based on the information formatted for the web, it won't be particularly "pretty" as a printed document. We have no plans to make any kind of "traditional" O/M.

The site has the ability, now, to be exported as a static HTML site.

This is VERY disappointing. I have printed the web wiki and the complete reference manual. No doubt (probably) all the info is there. But if that is all we will ever get as far as a Users Guide that will make life for many users difficult (and for sure will lead to some not buying the otherwise really great scanner).

Many people I know (including myself) prefer a users guide which is user friendly on paper. We do not have always our computers when scanning - but we may want to look up quickly something (I personally like to read the users guides of complex electronics while I travel).

Today we have a wiki - not very clean, difficult to read from beginning to end, looks not too nice on paper, and a reference quide, which is what is says: a reference guide - but not a users guide.

I cannot imagine that a company like Uniden with great products like the BCD396XT could not take the BCD396T manual (the pdf one which is while not excellent quite useful) and add / modify it so that it is suitable for the XT...

One may think that Uniden does not want to sell this unit to people new to scanning - only to those who have enjoyed this hobby for a long time, and are familiar with scanners in general, and also are willing to accept a long and tough learning curve if they want to master their BCD396XT.

I would be curious to find out how many people will return the scanner in frustration...

Just my 2 cents...

You may be right in respect to new scanner users, however I find that the idea of having a "hotfix" to the manual is a great idea. Once all the features have been completed in the Twiki, it will be much easer to "jump" to or "search" for a feature or item in the online manual.

906. First Impressions

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-06 15:46:22 UTC
From: Dave Landrum
Topic: 906 Message: 906

Hello,

Finally received a 396XT from DAS (an Uniden Distributor to Retail Stores) and I am quite impressed. After spending weekend programming nearly 6400 Channels with FreeScan (w/some bugs) and listening to it, the XT has a few advantages over the T.

Very good audio on P25, and the AGC seems to work more linear. The Multi-Site Trunking feature is a + and out of all the systems I programmed, only one could not be Multi-Sited due to TG limtation (500 vs 517, 17 TGs over, darn!) You can also Multi-Site LTR.

The Multi-Colored Backlight and Alert is a +, and sensitivity/selectivity is what was to be expected from a fine product. If you were on the fence about the XT, you won't be disappointed. Uniden did a fine job with it!

Clarification for the thread:

We are working on implementing a PDF export feature for the web. It will allow the web site to be exported as a viewable/printable PDF. However, since the content will be based on the information formatted for the web, it won't be particularly "pretty" as a printed document. We have no plans to make any kind of "traditional" O/M.

The site has the ability, now, to be exported as a static HTML site.

You are correct mine is the Complete Ref also. I never really thought of the User Guide and Complete Reference as being different. I guess they are.

I like the Complete Reference lots of good stuff.

I guess we are still waiting for the User Guide in PDF.

I retract my original email.

The pdf on my CD is the Complete Reference. While that's well worth having, it's not the same as the users' guide that is also on the CD in TWiki format.

> i am seeing if i need to spend 500 for another radio or if i can make my bc396t last another 5 years

As noted, the RR wiki has the new stuff highlighted at
http://wiki.radioreference.com/index.php/BCD396XT#Features

You can certainly make your 'T last another 5 years. The changes found in the 'XT aren't revolutionary, they're evolutionary.

Think of it as taking a lot of stuff from the 996 -- location-based scanning, multi-site, temp lockout, latching F key, negative delay (my fave) -- and adding it to the 396T.

That was enough to convince *me* buy an 'XT and I expect to sell my 'T for a good price here in a few weeks so I'll be out somewhat less than what I paid up-front.

I *really* like the negative delay - I can listen to the cops again without being driven nuts by their incessant chatter. :-) It'd be nice if that delay was settable on a per-TGID basis rather than per-system, however.

Add me to the list. I've had my 'T since they came out in 2005 and have still referred to the manual as recently as this year. Granted, I've referred to the PDF of the manual, but it's laid out in a manner that makes it easy to read and easy to search.

I like wikis and use them for documentation at work and have for 3-4 years now. Excellent for allowing updates with the ability to track changes.

Not sure if they are the right answer for documentation of a *device*. For a *process*, yes - see the previous paragraph.

Paul, how much of the wiki is editable by mere mortals? (yes, I registered)

One of the sayings on Wikipedia (yes, I edit) when people get upset about some error or poor grammar or confusing writing is .... {{sofixit}} ... so can we fix it? :-)

>
Yes, agreed. But that assumes you have your computer with you when scanning. I rarely do.

I bought a handheld scanner, so that I can carry it around.

It is easy to have a users guide on paper with me. But a laptop all the time - as an electronic users guide: that is too much...

So let me get this right.

I'm paying over 800 dollars for a radio and it doesn't even come with a printed manual in the box?

Unreal.

I guess the extra $5 in paper was too much to justify.

Not if you learn to use your scanner and can manually program it.Or like another person take a disk to Kinko's and spend $13 to $20 to print it or print it yourself. Otherwise yup, you gotta carry the computer. The manual would have added printing and shipping costs, Uniden instead saved you those costs, or they would have probably charged $50 or more for the scanner.

May I suggest that the time to try new SW is not the time when they have
just added new features or new model support. Bugs are much more likely.

Of course, this rules out any current SW for the XT, and they have all
only recently added XT support.

I have no problems printing - actually I already did. The problem is that what I printed is not really good. The wiki looks crappy printed, and the reference guide is not a users guide. I would be happy with a real users guide as PDF - but apparently we will never get it.

I always take the laptop with me for long trips and even some short trips too. As an addition I use the laptop for both logging scan hits and for GPS when it goes along. I also use it for internet with Verizon Wireless.... great setup for travel!
I don't travel light as I usually have the laptop and up to 6 scanners on trips.

No - you learn how to use the scanner and then the only manual you need
is your brain (which most people carry around with them anyway).

Granted, it may take a few days to a few weeks to learn it, but it's not
that hard. You may not know how to perform a particular function, but I
bet when you get back home and learn how, you won't forget it. We tend
to learn more from our mistakes than from our successes.

If you really need a printed manual, print one yourself as was mentioned.

In this age of environmental sensitivity (AKA tree huggers), it's nice
to see that Uniden is doing the responsible thing. I would add that they
are not the only scanner manufacturer to "save a tree".

You can print the Complete Reference, but at present there is no easy
way to print the wiki which is the users' manual. Two different documents.

923. Re: [BCD396XT] Re: Printed Manual

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-06 18:39:20 UTC
From: Uniden UPMan
Topic: 871 Message: 923

At this time, most pages are only editable by people "inside the firewall." However, I have created one page that any registered user can use to provide suggestions for a printable quick reference (http://info.uniden.com/twiki/bin/view/UnidenMan4/QuickReferenceInput).

I am in the process of making some major revisions to the overall site content...but I'm doing that on a parallel "hidden" area, so I can't make a lot of changes to the main area right now (because it means I have to make the changes twice...). That situation should improve in about a week, though.

Meanwhile, I'd also like some suggestions for useful how-to articles we can add in the future. These would be formatted for printing (i.e. they would either be PDFs or include a PDF version that is easy to print). I've made a page that any registered user can edit called: http://info.uniden.com/twiki/bin/view/UnidenMan4/HowToSuggestions to collect these ideas.

> Many people I know (including myself) prefer a users guide which is user friendly on paper. We do not have always our computers when scanning - but we may want to look up quickly something (I personally like to read the users guides of complex electronics while I travel).

Add me to the list. I've had my 'T since they came out in 2005 and
have still referred to the manual as recently as this year. Granted,
I've referred to the PDF of the manual, but it's laid out in a manner
that makes it easy to read and easy to search.

I like wikis and use them for documentation at work and have for 3-4
years now. Excellent for allowing updates with the ability to track
changes.

Not sure if they are the right answer for documentation of a *device*..
For a *process*, yes - see the previous paragraph.

Paul, how much of the wiki is editable by mere mortals? (yes, I registered)

One of the sayings on Wikipedia (yes, I edit) when people get upset
about some error or poor grammar or confusing writing is ....
{{sofixit}} ... so can we fix it? :-)

If you're paying $800 US dollars, then you are paying about $300 too much... and you're complaining about having to use $5 in paper to print your own manual? For those of us who don't need one, it's an unnecessary expense and is not environmentally friendly.

Keep in mind Uniden is not the first to do this, nor the last. It's a new policy for going green. You know, save a tree? I did print my own version of the reference guide for myself. Already had the recycled paper and the ink is soy. I think I hear a chain saw...

What systems were preprogrammed in your 396xt when you turned it on? Mine had 26 systems from around the US including AlaskaLandMobile, GeorgiaEMGWireless, and NC VIPER, just to name a few. This seems like an odd collection so I thought I'd make sure this is what everyone else has.

I always like to make sure the "new" scanner I'm buying isn't someone elses return. Thanks!

Steve

I hate copy-n-paste replies, but in this case it seems necessary. Last night I posted:

I thought Paul had said that the PDF wasn't ready yet, but that there would be one on the website.

and a couple hours later UPMan posted:

We are working on implementing a PDF export feature for the web. It will allow the web site to be exported as a viewable/printable PDF. However, since the content will be based on the information formatted for the web, it won't be particularly "pretty" as a printed document. We have no plans to make any kind of "traditional" O/M.

Seems to make it clear that you WILL get it.

There are two different issues: one is that there is no users guide on paper. That is OK, one could always print a PDF file. However the second issue is, that there is NO users guide as PDF , so we do not even get the chance to print it...

He says that the wiki will be available in PDF. Actaully, it already is available today as PDF (right on this forum). Just print it: it looks like crap.
What I would really like to have is a "real" users guide, like the one written for the BCD396T. As per Uniden that will never happen...

Joe it's the world wide web you know, it is not just people in the USA that buy scanners. Also he did not say he was paying $800 "US" dollars.

Personally I don't think we should have to print our own manual for an electronic device that cost a considerable amount of money.

Uniden is selling an high priced scanner, that is an incomplete product. Where supposed to print our own manual and provide our own software to operate it.

I new policy of going green, interesting, paper is a renewable resource, it is biodegradable, and reusable too. The production of cds although cheaper for the manufacturer to use and put manuals on, is none of the above. There is probably more damage done to the environment producing cds then producing a printed manual.

The idea isn't to "get out of printing and including a manual." The idea is to have a document that allows for continuous improvement over the life of the product.

However, YHO noted.

Joe it's the world wide web you know, it is not just people in the USA that buy scanners. Also he did not say he was paying $800 "US" dollars.

Personally I don't think we should have to print our own manual for an electronic device that cost a considerable amount of money.

Uniden is selling an high priced scanner, that is an incomplete product. Where supposed to print our own manual and provide our own software to operate it.

First off if they bought it and returned it they are mighty fast.
They all had the same number of systems.
Uniden picks the systems in areas were the most scanner sales happen or based on the systems most popular with scanner users. By far not complete it is meant to get people started that don't know what to program into the radio.

What systems were preprogrammed in your 396xt when you turned it on? Mine had 26 systems from around the US including AlaskaLandMobile, GeorgiaEMGWireless, and NC VIPER, just to name a few. This seems like an odd collection so I thought I'd make sure this is what everyone else has.

I always like to make sure the "new" scanner I'm buying isn't someone elses return. Thanks!

No offense, but it's actually their customers that think its alright.
If the customers didn't think it was alright, the dealers wouldn't do
it.

What's the stat? 80% of the population of Canada lives withing 100 km
of the US border?

That's a good concept, providing everyone has a computer, and internet connection. Not to mention a failure of either at a time when you need them. On the other hand a printed manual could get destroyed, or lost or stolen too.
I think I would still like the printed manual in my hand and not rely on my computer, or the internet, or depend on others for providing it electronically.

At this time, most pages are only editable by people "inside the firewall." However, I have created one page that any registered user can use to provide suggestions for a printable quick reference (http://info. uniden.com/ twiki/bin/ view/UnidenMan4/ QuickReferenceIn put).

I am in the process of making some major revisions to the overall site content...but I'm doing that on a parallel "hidden" area, so I can't make a lot of changes to the main area right now (because it means I have to make

the changes twice...). That situation should improve in about a week,
though.

Meanwhile, I'd also like some suggestions for useful how-to articles we can
add in the future. These would be formatted for printing (i.e. they would
either be PDFs or include a PDF version that is easy to print). I've made a
page that any registered user can edit called:
http://info. uniden.com/ twiki/bin/ view/UnidenMan4/ HowToSuggestions to
collect
these ideas.

Add me to the list. I've had my 'T since they came out in 2005 and
have still referred to the manual as recently as this year. Granted,
I've referred to the PDF of the manual, but it's laid out in a manner
that makes it easy to read and easy to search.

I like wikis and use them for documentation at work and have for 3-4
years now. Excellent for allowing updates with the ability to track
changes.

Not sure if they are the right answer for documentation of a *device*..
For a *process*, yes - see the previous paragraph.

Paul, how much of the wiki is editable by mere mortals? (yes, I registered)

It takes 20-40 years to grow a tree, not so renewable for the present. And since we need trees to make oxygen we breath cutting all those trees so you can have a manual is counter productive in a number of ways. And do you want to pay another $50 or more dollars so you can have a manual.... not me, I still have a good memory, and if I forget something it isn't like the scanner doesn't have menu's where things can be programmed from.

I understand what you are doing and it is a move into a new way of handling manuals. Right now I find it a little clunky but I'll get used to it. I like the idea of you being able to update the manual during the life of the product as errors are discovered and new features released.

I really appreciate your active participation in this list. Keep up the good work.

I'm seeing a problem with the write back to the radio also.
It is mixing some of the trunked system freqs and talkgroups.
It mixes some of the trunked system freqs into conventional systems.
It misses some of the talkgroups in the trunked system that were in the database. But the recording and history functions are great. Worth the $50. I'm sure they will iron out the read and write to the BC346xt. Also haven't been able to import a database from Radioreference.com. Probably just trying to be the first one out with purchased software.

  Fully functional? Not if you expect it to write the data back to the scanner! (Found out the hard way after it erased all data in the scanner). The beg screen popping up is another annoyance... a quality product sells itself without the need for beg screens. User Beware!

Paul,

I completely agree, and there are other benefits to having an online manual - as I get older, I haven't the eyesight that I had as a kid, and I can fashion a PDF file any way I want: if I need larger font or bolder print, I can do that. Extra copies - no problem!! Give me an online manual any old day. Times have changed.

This reply will probably wind up being asequential with an earlier reply in this thread mentioning that I was having trouble uploading.

After performing a very technical adjustment to the program settings (as in, save, close, exit, open ;-)) I was able to upload with no errors. So, if anyone encounters failures uploading, trying just restarting the program. Worked for me!

Already done. See http://wiki. radioreference. com/index. php/BCD396XT. Every feature in bold is new to the 396XT vs the "T".

Subject: [BCD396XT] bcd396t VS bcd396xt

i dont want to start a off topic thread, so i ll do it this way

can any one summarize for me , if you can, what the difference between the 2 radios is?

i am seeing if i need to spend 500 for another radio or if i can make my bc396t last another 5 years

I remember the bc235 xt vs the bc245xt i had to make that switch to get EDACS radio capability, but am not sure if i need to do that again ,, i really like my 396xt i just want to see the differences between the 2 radios

thanks in advance

I favor the bcTool. It lets be add, edit, delete, and control the radio via the com port. It is a bit pricey being FREE. Oh and it's not that hard to use.

951. Newbie Question: ProScan vs. Freescan (or others) for 396XT

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-07 02:33:34 UTC
From: SuperCraig
Topic: 951 Message: 951

Brand new to the hobby, and my Uniden BCD396XT is scheduled to arrive on Thursday. I'm both excited, and a bit nervous as the learning curve is SO obviously steep!! None-the-less, I'm mostly excited about getting my scanner programmed properly.

I've lurked on the site for a while and am slowly (but surely) starting to pick up some of the lingo.

After choosing the scanner (we are mostly Digital here in Denver), the next big decision is which software to use to program it. It looks like ProScan and FreeScan are the two out there that are currently working with this unit (with more vendors coming out with updates in upcoming weeks from what I've heard).

IF you've had experience with ProScan and/or Freescan, can you please tell me what you did AND didn't like about each. I'm open to waiting for another vendor to release their update if you have another product suggestion (but one requirement is that it does work with multiple scanners as I'm sure to get a base unit as well before too long, and it doesn't seem to me to make sense to pay money for a product that only supports one scanner).

As I said- I'm new to all of this, so ease of use is probably my most important factor. Money is not a factor- the ease of use and effectiveness of the software is what's most important to me.

From looking at their websites- for ProScan I seem to like the visual interface better (especially the control screen for the scanner), and for Freescan the "Automatic Scanner Optimizer" feature sure seems like something a newbie like myself would appreciate. If you've used that feature, let me know how effective it is, or if you think it's just a gimmick.

I'm open to any other input/suggestions regarding my software choice. If I missed a thread with this comparison, or there are other resources online I should be aware of- links to those would be GREATLY appreciated.

OK... now I hope to get lots of feedback to help me make this important decision!

Thanks in advance for any/all input that's offered

I'm seeing a problem with the write back to the radio also.
It is mixing some of the trunked system freqs and talkgroups.
It mixes some of the trunked system freqs into conventional systems.
It misses some of the talkgroups in the trunked system that were in the database. But the recording and history functions are great. Worth the $50. I'm sure they will iron out the read and write to the BC346xt. Also haven't been able to import a database from Radioreference.com. Probably just trying to be the first one out with purchased software.

Fully functional? Not if you expect it to write the data back to the scanner! (Found out the hard way after it erased all data in the scanner). The beg screen popping up is another annoyance... a quality product sells itself without the need for beg screens. User Beware!

Mel,

That's why the first word I used is *IF*. It's a qualifier that means (generally speaking) "under the conditions that follow", those conditions being the words "you're paying $800 US dollars".

If he is not in the USA, then the qualifier is negative and the rest of the statement does not apply (specifically that he was paying $300 too much).

It's pretty sad when common grammar has to be explained, and it almost appears you are looking for anything to complain about, Mel.

As for the money, I just purchased a few computers that cost significantly more than $500, and guess what - THEY didn't come with paper manuals either.

To top it off, these PCs didn't even come with OS discs! Remember when you used to get a disc with Windows XP on it? You don't get that anymore, and discs cost significantly less than paper manuals.

Yes, there are advantages to paper manuals. But, there are also disadvantages with them in that when ONE feature is added, the manual becomes obsolete. You're a member of the 396T list. Didn't you see the complaints about how the added features for V3 were not included in a manual that was printed (and in some cases purchased) several years ago?

There is also the fact that the current administration in the USA is going to be much more unfriendly to businesses (an admitted fact). They are going to tax them more and impose more penalties on those who are not doing 'their share' of 'going green'. Either case is a reason for the businesses to RAISE PRICES. Rather that doing that, Uniden decided to cut costs AND pacify the tree huggers by not printing thousands of paper manuals and lowering the production costs. Would you have rather paid $15 more to get a manual? If so, wait until the PDF is available and spend $15 at Kinkos or your local office supply store and have them print your manual.

Better yet, have them print several and sell them on eBay to all those who 'need' a paper manual. On second thought, there may be some copyright issues with that, but you can still print your own.

Yeah, and if it supported the 'XTs, it would be great. But it doesn't
... and the author is on hiatus (working for pay - the nerve!)

In the meantime Freescan works acceptably.

What's the ETA on UASD?

Proscan: $50
Freescan: $0
bcTool: $0 (but development suspended temporarily)

Until UASD ships, or the bcTool author has time to work on his project
again, it's Freescan for me.

I like bcTool's logging better and will switch back when it gets
updated. UASD for the 'T was more than adequate for me for system
management and I'll use it for that when it comes out for the 'XT.

If it's a renewable source WHY are we losing so much of the rainforest
every SECOND?!?!? (1.5 acres PER SECOND!) Source:
<http://www.rain-tree.com/facts.htm>

Why are we losing 50,000 species of plant and animals every year?

There are a lot of other things we are losing, but it's all pretty much
at the above URL. Basically, we are killing our eco system. But, heaven
forbid someone can't get a PAPER manual for a scanner.

Doesn't look like it's very 'renewable' to me! I think you need to
review the facts before making such a statement.

BTW, CDs CAN be recycled. They are made of metal and plastic.
Ironically, they can even be recycled into, of all things, more CDs.

As noted, the RR wiki has the new stuff highlighted at
http://wiki. radioreference. com/index. php/BCD396XT# Features

You can certainly make your 'T last another 5 years. The changes
found in the 'XT aren't revolutionary, they're evolutionary.

Think of it as taking a lot of stuff from the 996 -- location-based
scanning, multi-site, temp lockout, latching F key, negative delay (my
fave) -- and adding it to the 396T.

That was enough to convince *me* buy an 'XT and I expect to sell my 'T
for a good price here in a few weeks so I'll be out somewhat less than
what I paid up-front.

I *really* like the negative delay - I can listen to the cops again
without being driven nuts by their incessant chatter. :-) It'd be
nice if that delay was settable on a per-TGID basis rather than
per-system, however.

Hello Group

My question is why would you buy any scanner or any other scanner without a written manual in the box? I could be wrong but seems like Uniden is trying to save money by not providing a written manual in the original box. Ok lets say that in years to come Uniden comes out with a better model and you as I sometimes do have to sell one to get a portion of the money to buy the better model and you have a buyer but once he finds there is know written manual you lose a sale. Just something to consider before spending 800.00 or so on this product.

Well then we should get both an online manual and a printed manual. I am old, (65) and I have trouble reading manuals, books etc off the computer, and I don't want to be tied to a computer to look something up either.
Now tell me why your needs should be any less valid then mine.
This thread is getting rather silly, what with the loss of trees and the lack of oxygen and all :>) so I will do without the printed manual. I'm getting tired defending why a printed manual should be part of the package anyway.
One last comment.
I bought a 396, and a 996, and a 250d all new all registered at the Uniden site. All three of which I still use, and several other Uniden scanners which are pretty well door stops now, not Uniden's fault just the change in more advanced communications techniques. I consider myself a good customer, but I'm starting to think I am not getting my moneys worth.

Mel (a not so satisfied customer)

One minor issue: bcTool does not support the 396XT. It won't for at
least a few weeks according to the author. Great program, but not for
the XT.

Would you take a free Hyundai or a BMW with all the bells and whistles like a GPS navigation system, auto cruise for 50 dollars? Can't fork over 50 dollars is another story then you have to get by with the Hyundai. It will get you from here to there but you may get lost without the GPS. It may be a noisy ride but you will get there.

I've been using bctools since it's inception, Thanks to Rob! and all his hard work! Your employer must be working you 24x7. I use bctools for my 330T, 396 and 996 without many issues. Since Rob has been putting in so many hours in his real job, he hasn't been able to spend any time upgrading it for the 396XT yet. But good things come to those who wait...

Welcome to the 21st century. Saving paper is a big thing anymore. It's going to be even bigger in the next 4 years.

As for the sale, two comments:

1. Tell him there never was a manual, and that it's available online. If he waits to buy a 396XT with an OEM manual, he will never get one. On top of that, with the current firmware the manual will also be current - something you cannot say with an OEM paper manual.

2. How many times have you purchased something used and the manual was 'lost' or it wasn't included. In recent times, you simply went to the web and DLed another one! This is no different aside from the fact that there was nothing to fill the landfills, nothing to burn, and nothing to sit in a drawer for 50 years (and later sell on eBay for $10,000).

Glad to see you got your email problems straight. I was trying to help you, but all your requests where I sent replied bounced. But, I did try to help you.

Joe M.

kd5pqv wrote:
> Hello Group
>
> My question is why would you buy any scanner or any other scanner without a written manual in the box? I could be wrong but seems like Uniden is trying to save money by not providing a written manual in the original box. Ok lets say that in years to come Uniden comes out with a better model and you as I sometimes do have to sell one to get a portion of the money to buy the better model and you have a buyer but once he finds there is know written manual you lose a sale. Just something to consider before spending 800.00 or so on this product.

One word: Kinkos.

A few more, as this thread is becoming counter-productive, let's end it soon. UPMan has already told everyone the status of an OEM printed manual, and the reasons for going with the online manual.

Everyone has the option (or will soon) to get a printed manual from other sources where you won't be tied down to a computer or have trouble reading the screen.

To head off the complaints sure to follow about how the PDF should have already been available, likely replacement parts are not yet available either. This product is less than two weeks old. Sometimes it takes a few weeks to make everything available or get everything in stock.

Granted, a few more words than I was going to say, but...

The slim BCD396T manual fit in rear pocket. A "Kinkos" copy won't.

> A few more, as this thread is becoming counter-productive, let's end it
> soon. UPMan has already told everyone the status of an OEM printed
> manual, and the reasons for going with the online manual.

I have been quiet in this debate. But, Uniden's decision is silly.
My $70 DVD player came with a manual. My $300 Blu-ray player came with
a manual. My new $800 LCD came with a manual. My two CD players both
came with manuals. My AVR came with a manual. The computer? No manual.
But I got the motherboard manual, audio card manual, etc., with the built
computer.

As far as the "save a tree" mantra is concerned, Uniden not including a
manual with the BCD396XT is HUGE in its insignificance. I don't think a
line of text on this message is wide enough to contain all the zeros to
the right of the decimal point to show the percentage of the worlds paper
that a Uniden BCD396XT manual would consume. Heck, announcing that the manual
was made of 100% recycled paper would be a better idea.

I like to make notes in my manuals. I like to refer to my notes even when
away from my computer, or if the computer is turned off (reducing my carbon
footprint.) PDF manuals are nice (if you're at your computer), but they are
NOT a substitute to a real paper manual.

Until this situation is resolved, I *won't* be getting a BCD396XT to add to
my collection of Uniden/Bearcat scanners.

970. Re: Newbie Question: ProScan vs. Freescan (or others) for 396XT

From: SuperCraig
Topic: 951 Message: 970

Well yes, it will ultimately come down to MY choice in the matter, and starting with the free ones seems somewhat logical (not bragging here, but money's not really a factor though)...

Here's my thinking- the learning curve for this entire hobby (let alone the specific scanner I bought) is so steep that I wanted to put a fair amount of effort into finding the "best" (for me) software so that is one less thing I need to concern myself with (and wouldn't have to learn too many systems).

If I don't hear some compelling evidence for ProScan, then I'll start with Freescan and see if it meets my needs.

I also don't like to re-invent the wheel (or in this case, learn about software that's tough to use by finding out myself instead of hearing others' opinions).. besides, that's the best use of an online Forum, IMHO...

thanks for taking the time to respond John, I'm aligned.. AND looking for more feedback as well :)

971. Re: [BCD396XT] Digest Number 105

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-07 04:45:44 UTC
From: Gerry
Topic: 971 Message: 971

I received mine from CEI ($459.95 + $30 shipping) and got down to business. Having loaded the metro Denver stuff from ARC396 into FreeScan earlier, I merely plugged in, transferred, and after a minor glitch (FS changed all my P25's into EDACS, which I didn't catch until after I'd loaded the scanner; had to go back into the software, correct it, and reload) was up and running. Excellent radio... Thanks, Uniden & UPMan!

As for my .02... don't need a paper manual. Never use them anymore. A PDF on the laptop is plenty. (Had to laugh about the comment regarding those without computers... jeez, if they ain't on the 'net, how will we ever know what they think???) I especially like PDFs because I can pick out specific pages, print only what I need, and make my own quick reference, which, as I learn the more complicated steps and no longer need a cheat sheet, can be updated. A simple adjustment in the "print" function, and 2 pages or more can be printed on a single sheet. OTOH, you paper-manual types either have to take up precious space with a book, xerox a page or two, or (ugh) tear the pages out. To each his own, I guess.

I've found the reference to be more than enough info so far. Every question I've had is answered in there. Gotta say though: technology sure is fun... these modern scanners aren't for the faint of heart, anyone that refuses to or can't understand the directions, or those that think all new radios should work like that 6-transistor they had back in the '60s....   =)

Hmmm, seems to me most people find reading a manual online easier than in a book form as they can zoom in. I know it's easier for me than using a magnafying glass to read the 996T/396T manuals or even worse my Canon 1D MKII N mini sized manual. I downloaded that one just so I could read it on the computer as it was so small the print was like reading the fine print on a software license. Most people in fact find the online manuals easier to read, and even online books are easier to read. My cousin is married to a guy who is nearly blind and he has to use a computer or brail as he can't read normal sized print at all. Put the same thing on the computer he can zoom in and read normaly.

One last thing.......

I think part of the reason GRE and Uniden decided to go without a manual
was financial, and it helps the tree huggers but also they found that many
people don't bother reading the things anyway so why waste trees and money
for something that won't get used? I have to agree and I have seen thousands
of posts in scanner forums and mail lists where people ask questions about
some function or another only to find out they never opened the manual. Then
you have another group that opens the manual and can't understand it so they
just pay someone else to program the scanner and their manual gets trashed
or tossed in a corner somewhere to be found 20 years later.
The actual percentage of those who actually read or use the manual is
really small and it just doesn't pay to make them.

If you want it printed small enough to fit your pocket Kinkos will be glad
to do it, it would probably be cost prohibitive but hey it is a $500
scanner....

Before I start this, I was surprised too that there was no paper manual, but as I think about it, maybe it makes sense.
I find it interesting that we are so into technology that we buy the latest and greatest scanner on the planet, but then we complain when there's no old-fashioned paper manual. If you really need the manual with you at all times, buy a smartphone or other handheld computer and put it on there. You just shelled out 500 bucks, what's 100 more? Besides, it's hard to search for words and follow hyperlinks in a paper manual. The index is your only friend.

I'm a ham and occasionaly need to refer to manuals. But do you know when the last time is that I actually refered to a paper manual for a scanner or ham radio? I don't either. It's been a while, that's for sure. I just use the one on my computer or on the 'net.

<DaveL:> True. However, AFAIK, there was no OUTRAGE about it, not the type I have been reading here on this list. Constantly bashing Uniden over not providing a paper OM is insane. GRE's manual is on a disk and .pdf format, and Uniden will go the same route.

If you need paper, print it yourself. Some of us don't need the paper manual and find the Menu System useful enough not to warrant use of the OM. There are more important things to discuss about the XT than the innocent murder of trees. Some, even with the paper OM, still wouldn't understand certain feature sets and use electronic means to better understand.

Let's close this issue on a positive note and get back to discussing the XT, not paper.

I think you are missing the point.

An on line manual, continuously up dated to accommodate changes (i.e. downloaded upgrades) is preferable to a static document that, after a few months or years, is out of date. This is a storm in a teacup issue.

Hello Group

My question is why would you buy any scanner or any other scanner without a written manual in the box? I could be wrong but seems like Uniden is trying to save money by not providing a written manual in the original box. Ok lets say that in years to come Uniden comes out with a better model and you as I sometimes do have to sell one to get a portion of the money to buy the better model and you have a buyer but once he finds there is know written manual you lose a sale. Just something to consider before spending 800.00 or so on this product.

The solution.
Do not provide a printed manual at the time you purchase of the scanner. Do an online updated version. Have a printed version that people can puchase after market. Everyone's happy. Smile.

I agree that a continuously updated online manual is preferable. And, in addition:

If someone chooses not to update their radio, or if they buy one that is in a prior state of update (but doesn't have the latest in it), then it would be nice if they could find the instructions that match their particular radio's updated (or not updated) status.

With this thought in mind, perhaps Paul can use color highlighting when he updates the online manual, so that it retains the original material plus all updates, and one can easily see what's changed. There could also be a separate document (maybe at the front of the manual) that lists and summarizes updates.

I would also like a PDF that I can download and have on my computer (so I can have access to it when our server is down, and so I can blow up the type size), and I want it to match the updated (or not updated) radio when I buy one. Thereafter, I can go to the online manual and just copy updates when I update the radio.

Just my 2 cents . . .

983. Poor RF Front End/Dynamic Range of Uniden scanners

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-07 16:53:47 UTC
From: just_a_radio_guy
Topic: 983 Message: 983

Hi all!

I have many Uniden scanners. From old models (199x era) to latest models, like BCT15, BCD996T and BCD396T.

BUT THEY ALL HAVE THE SAME ISSUE - POOR RF FRONT END AND DYNAMIC RANGE.

I live in a big city and I have antennas on a roof (for e.g. Diamond X50, discone & etc.).

IT'S IMPOSSIBLE TO USE THEM WITH UNIDEN!

I constantly have an interference from powerful transmitters inclining distant (located 7-10 miles from me). It mainly paging transmitters and TV broadcasting. Also interference appears from trunking systems. Especially strongly these problems appears on VHF band which I love most of all. On UHF situation is a little bit better, but as a whole all the same unacceptable.

I have installed radio broadcasting filters to cut out frequencies of 88-108 MHz. But nothing has changed!

You will tell that Uniden scanners are not intended for connection to effective external antennas? Ok, but I test the same problems using Uniden scanners in the car equipped by external aerials (1/4L with magnetic base). You will tell that Uniden scanners are not intended for connection to vehicle antennas? Ok then why the same problems are often appears even when I use it with the regular portable antennas?

Transceivers, for e.g. Yaesu, Icom and Kenwood (including multiband) have no such problems. Or they are appears in one hundred times less, than with Uniden.

WHY UNIDEN DOES NOT WISH TO NOTICE THESE PROBLEMS?

BCD396T - last purchased by me Uniden.

I SHALL NOT BUY MORE THAN ANY MODEL WHILE UNIDEN WILL NOT IMPROVE RF FRONT-END AND DYNAMIC RANGE THE SCANNERS.

If Uniden does not wish to improve RF performance of scanners why they then do not offer external bandpass filters? I tried to find ready-made wide bandpass filters, but nothing has found. All filters have a narrow bandpass not widely than 3-5 MHz (for VHF band). But I am interesting in bypass filters on 137-173 MHz and on 403-500 MHz. But I cannot find them. Why Uniden to not order such filters for e.g. in Mini-Circuits company? On it would possible to earn additionally.

Maybe anybody know where I can buy similar bandpass filters (approx.: 137-173 MHz and on 403-500 MHz)?

I'm trying to use the search feature that came with the CD manual for the xt to find things. It always gives me the "cannot display the web page" message. I am using the CD that came with the radio.

Is this a known problem or just me?

Has anyone else be able to search the manual?

These guys make good filters and you can order them custom made for a few dollars more than stock filters. They will also tell you up front if they can help. Either Grove or Universal Radio (Grove I think) has the stock filters.

I have used them in commercial broadcast applications with good results.

Don, KE4JD
---------- Original message from "just_a_radio_guy" <eika@...>: ----------

Hi all!

I have many Uniden scanners. From old models (199x era) to latest models, like BCT15, BCD996T and BCD396T.

BUT THEY ALL HAVE THE SAME ISSUE - POOR RF FRONT END AND DYNAMIC RANGE.

I live in a big city and I have antennas on a roof (for e.g. Diamond X50, discone & etc.).

IT'S IMPOSSIBLE TO USE THEM WITH UNIDEN!

I constantly have an interference from powerful transmitters inclining distant (located 7-10 miles from me). It mainly paging transmitters and TV broadcasting. Also interference appears from trunking systems. Especially strongly these problems appears on VHF band which I love most of all. On UHF situation is a little bit better, but as a whole all the same unacceptable.

I have installed radio broadcasting filters to cut out frequencies of 88-108 MHz. But nothing has changed!

You will tell that Uniden scanners are not intended for connection to effective external antennas? Ok, but I test the same problems using Uniden scanners in the car equipped by external aerials (1/4L with magnetic base). You will tell that Uniden scanners are not intended for connection to vehicle antennas? Ok then why the same problems are often appears even when I use it with the regular portable antennas?

Transceivers, for e.g. Yaesu, Icom and Kenwood (including multiband) have no such problems. Or they are appears in one hundred times less, than with Uniden.

WHY UNIDEN DOES NOT WISH TO NOTICE THESE PROBLEMS?

BCD396T - last purchased by me Uniden.

I SHALL NOT BUY MORE THAN ANY MODEL WHILE UNIDEN WILL NOT IMPROVE RF FRONT-END AND DYNAMIC RANGE THE SCANNERS.

If Uniden does not wish to improve RF performance of scanners why they then do not offer external bandpass filters? I tried to find ready-made wide bandpass filters, but nothing has found. All filters have a narrow bandpass not widely than 3-5 MHz (for VHF band). But I am interesting in bypass filters on 137-173 MHz and on 403-500 MHz. But I cannot find them.

Why Uniden to not order such filters for e.g. in Mini-Circuits company? On it would possible to earn additionally.

Maybe anybody know where I can buy similar bandpass filters (approx.: 137-173 MHz and on 403-500 MHz)?

You are not the first one to bring this up. I have 4 of the newer Uniden scanners and all four of them have a poor front especially in the VHF range.

For me UHF isn't as bad either but I think it is a bit deaf .

In all fairness though if you think Uniden is bad try the GRE lines at times they become almost un useable in the VHF range with and outdoor antenna and you end up using the attenuator feature and end up missing anything with a weak signal, and there are even times that does not work.

I will stay with Uniden; I think they have the better front end of the two.

Why not? Some of their radio systems are made by Motorola and so forth....
However I disagree with his and others comments, I don't have the issues
he's complaining of and it sounds a lot like he has cheap coax. I see it all
the time people complain about a radios front end and the whole issue is
really the coax they are using is cheap and lossy and poorly shielded.

John

I have to assume that this obsession with manuals indicates a lack of other problems to discuss.

BTW I am sure Kinko's can produce very large or tiny versions of any printed document; I can do much the same with my very mediocre setup.

What guys?

Grove Ent. And Universal Radio offers FM filters (already have) and few notch filters, but I am looking for bandpass filter, because notch filters isn't effective in my case. I have many interference soruces located on absolutely different frequencies.

Bandpass filters is different by ideology and can't be made by notch filter customization.

Wanted bandpass filters should be build from 1 LPF and 1 HPF.

What company in US or Canada can do such filter beautifully and qualitatively?

> They will also tell you up front if they can help. Either Grove

John,

Excuse, but you do not understand about what speak.

You can't have problems because you have low installed or/and ineffective antennas or/and live at a great distance from radio towers with strong transmitters (for e.g. 15 miles or more).

Wish to look at my coax? Ok, no problem: http://yfrog.com/e4myfeedersj

It's 1/2" feeder with continuous shield. These feeders used on cell towers.

Really, you know about my tower and nearby transmitters? I don't think so. I have one 50 foot tower, 6 very good and high gain antennas and two discones and two 40 foot towers. Now for nearby transmitters... got all of em covered there, 7 cell towers within 5 miles, might be a couple new ones too, not sure if they are transmitting yet. Then on top of that there are 12 farms within 5 miles on business band. 5 schools that have transmitters and they are also within 5 miles, and 3 of the schools and 3 of the cell towers are close enough I could hit them with a 22 rifle. One cell tower is less than a block away. There are three public safety tower sites within 5 miles as well, 8 more within 10 miles.... oh and we can't forget the airport that is 3 miles away using ground and air frequencies, plus the numerous other aircraft transmitters located within 10 miles. And last but not least we also have a ton of business and rail frequencies.... all within 5 to 10 miles, one a taxi company is across the street.
With all that plus the ham tower 3 miles away, the telco business radio system on the same towwer I don't have any problems pulling stuff in from 50+ miles on any of my scanners (19 in total). I regularly hear Hamilton County Ohio at home just 3 miles East of Indy. So yeah I do know all about it, we have all the bands covered here, HF.....

Instead of carrier drop + n seconds delay, it's n seconds until the
scanner resumes.

For me, it's the only way to listen to the cops. 99% of what they say
on the radio is uninteresting to me, so this lets me hear the first n
seconds (5 or 10, haven't decided which is better) and if I want to
hear more I can hit hold. Otherwise, it just continues on.

I would not sell your T just for that, in fact it could be a pain in the neck feature. What it does is allow the scanner to leave a frequency at some chosen delay point that you have set, surprisingly enough, even during a conversation. The idea is if you don't want to listen the xt will carry on automatically with no manual (OOPS better not say that) intervention on your part but if you do want to listen you got to get to the scanner and push Hold. Getting to the scanner to push hold could be the problem, like if your driving, or across the room, or preoccupied with something else, or just walking/biking with it on you hip. If you don't get there your going to miss the transmission you really wanted to hear because of the negative delay that you had set.
With the old T, you won't miss that transmission you wanted to hear, because it won't leave that freq' until the transmission is over. If there is a conversation you don't want to hear, you just push scan button manually (damn) and the T will carry on scanning.
To me it just does not seem like a feature, more like a hyped up feature to add to the list of features over and above what the old 396T can do. So now I guess a few of you are going to get on my case again for saying that.

Mel
(I could be wrong in my explanation, just my take on what I think it will work like)

Then there is the other argument... here in Wisconsin where I live, paper mills are closing down at a steady pace. Each time a mill closes, hundreds of jobs are lost. Every job lost makes it harder for the communities to survive and for workers to find other comparable employment. Once the local economy dries up, there are less funds available for spending on pleasure items. This in turn means fewer sales, and in the long run higher prices. I can see the benefit of reduced waste. I like having electronic documentation. In the end it is a matter of personal preferences. The question in my mind becomes when will the effects of the job losses become obvious in increased packaging cost due to fewer producers. Newspapers around the globe are going out of business. The writing is on the wall... or is it on the computer screen?

Topic: 1006 Message: 1006

UPS just dropped my new 396XT off about an hour ago. Thanks Scanner Master for getting it out the door with a seamless transaction and thanks also to Paul from Uniden for keeping us in the loop and to the maker of freescan for a very nice program to get me going. You folks are a true testament to the hobby and your efforts don't go unnoticed.

From doorstep to operation from a fully loaded file from my 396T was less than a hour. I'm not tech savvy but this whole set up was a no brainer. It definitely helped being a 35 year scanner owner and a 396T owner since 2005 but computer programming scanners has made things so much easier. I've used them all. The new GRE'S just gave me a headache but I'm a Uniden man through and through. I don't take lightly putting my 396T on e-bay but the XT will fill in just fine. The radio is solid. The audio is SO much better on all bands and the back light is better too. I'm keeping it on white. I live in upstate NY in a suburb of Albany with no intermod or interference and the MOT/Edacs/Conv systems are coming in just fine. Actually, I'm picking things up a tad better across the board. I live in a apartment so my receive is limited but sitting on the window sill next to my 396T I can easily notice the difference. My next test tomorrow will be mobile. So its a keeper and my very reliable 396T will go on the market to some lucky sole that don't have $500 smackers or the need for a new radio with all the bells and whistles.

If anyone is one the fence for a 396XT, go ahead and jump in. I do miss the small manual I guess but I can't remember the last time I opened it. No biggy. You will need a computer to program it, {unless of course you have a lot of time and strong fingers} and I'm sure its a computer with a workable CD reader. But most of all, relax, have an adult beverage and have fun with it. That's what it's all about !

Mel,

It's an option. You can simply not use it if you don't like it. Just set your delay to positive figured (or none) and the XT will work just like the T works.

Yes, you pretty well described how it works. There are some people who like that option. There were also many complaints when it was removed from the Uniden line-up.

CTCSS could be a 'hyped up feature' to someone in Iowa where there is no substantial frequency re-use. Would you rather Uniden cater to the least common denominator rather than have feature that not everyone may use?

I for one appreciate the option even though I may never use it personally.

I don't imagine there are many Pony Express employees left, either.

How many telegraph operators are still employed?

How many car manufacturers are offering a steam engine option?

Like it or not, paper is obsolete for many purposes. Its inflexibility
to self-update sealed its fate long ago. Mass Analog TV is going away,
too (with a few exceptions). The only thing constant is change.

There is only one firmware for it, and it comes with it.

If you mean software, there is currently FreeScan and ProScan. Both have some (minor) issues/bugs currently.

Comet and Diamond make duplexers which are bandpass filters. I don't know if they fit the need for you but in some cases they have helped me.

Yes, I know them. But they provide very flat slopes (i.e. poor squareness ratio). To improve slopes, two additional notch-filters required - one for low cut freq and one for hi cut freq. And maybe few additional notch-filters to cut off few strong transmitters.

The installation became as monster and expensive - identical to the BCD396XT by cost :(

Don't recall it ever being removed. The 780XLT had it, the 250D did
not; the 996T had it, the 396T did not. AFAIK, this is the first time
Uniden has put it in a handheld unit.

And I'm VERY happy they did! It's my favorite new feature!

1017. GPS issues and SQK's

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-08 16:17:38 UTC
From: crowemag55
Topic: 1009 Message: 1017

I'm curios to see if anyone else has seen this behavior.
And I apologize in advance for my rambling! :)

Using Freescan, I downloaded the data from my 996T to transfer it to the XT.. One of the things I noticed was, the System Quick Keys status weren't retained when uploading to the XT.. Ok so an annoyance. However when I SET them in Freescan and sent them back into the XT they still were not retained, so I had to go and set them on the Radio itself AGAIN...

Next, once I had the proper Null Modem adapter and was playing with the scanner in the car using the GPS, I found that the conventional systems didn't have the Use GPS set, nor did they have any Lat / Long data. I verified that the 996 does have the data but uploading via Freescan no conv system GPS data was sent. Trunked systems were and worked properly.... Back in the house I go! When I tried keying in the data to Freescan, it accepted my lat / long entries, but STILL didn't send it to the radio!!

Ok, Bob's turn... Download Proscan.

Having never used Bob's program before, I did get a bit frustrated when it wouldn't allow me to start the program, connect the scanner, SEE the virtual scanner working, but WON'T LET ME DOWNLOAD FROM SCANNER. AND it didn't say in the online docs anything about Create a New database first... At least not that I saw... But as a fart smeller, er Smart Feller, I got past that and retrieved my data from the XT.

On the subject of SQK's and Proscan, i'm not sure why they have their own download screen... that seems strange to me. AND if you don't use that screen, it appears they don't get their status retained a la Freescan.. Once I downloaded the SQK's and changed them in Proscan, I was able to send them in properly...

For the GPS, I didn't do the FULL test which would've been to download from the 996 and upload to the XT... But I did input the data via the PC keyboard and Proscan DID upload it properly... Maybe I'll try the full test just to be complete later on this week..

Thanks for listenin'

John

Same here. With that setting (and another, but don't recall which -
delay maybe?), I've found that if I don't save right away after making
the change, the change won't make it to the radio.

It's as if the software loads your radio with what's on disk even if
your "current buffer" has changes. This isn't expected behavior,
IMHO. What you've done in the software, regardless of whether you've
saved it, should be what gets uploaded.

Haven't attempted anything with the GPS, so have no comments on it.

This is a mute issue for you since you're past this point but would it be beneficial if a pop up window (first time use only) advising to the effect:

1) Select Scanner Type from the Options menu.
2) Select Comm. Port Settings from Options menu.
3) Create New database from the Database menu.

or if there is something else that would be better, I'll like to hear it. If anyone hates learning curvers, it's me.

The download screen you're referring to is the "Quick Keys / Search Keys" tab.
That for turning SQK's, GQK's, Search Keys ON and OFF. In the case of SQK's that's equivalent to turning then ON / OFF from the front panel. - 0 to 9 and above 9 the (.No) key then the two digit number.

Defining the SQK's is still done in the Systems (Conventional) / Sites (Trunking).

Known Issues with version 2.0.0 that are fixed in the next version:
Groups (TGID's) Location Info missing
P25 Standard Trunk & P25 One-Freq Trunk Audio Type showing in the TGID channels grid.

Bob Aune,
ProScan

Interesting Peter.... I was saving, and saving often during my run with Freescan, but can't attest as to whether or not I did between entering the lat/long and uploading... I *believe* I did....

John,

Yes display issues only.
No corruption or scrambling of the data because the commands containing these parameters are still the same length (amount of commas)
The Audio Type will be ignored but the command will still be accepted.
Location info just not send but the command still accepted.

From: JAN FINE
Topic: 895 Message: 1023

Today I was using this feature with Proscan.
I was away from the radio and wanted Proscan to log freqs and pl tones in a certain range. I did not want the radio to sit on a long conversation and miss others. Just long enough to log and move on. I set the delay to -2.

Instead of carrier drop + n seconds delay, it's n seconds until the
scanner resumes.

For me, it's the only way to listen to the cops. 99% of what they say
on the radio is uninteresting to me, so this lets me hear the first n
seconds (5 or 10, haven't decided which is better) and if I want to
hear more I can hit hold. Otherwise, it just continues on.

1024. Close Call

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-09 00:13:27 UTC
From: kb0gus
Topic: 1024 Message: 1024

So,

I am playing around with close call (or trying to) and can't seem to get it to work.

I go to close call only mode and literally sit under the local airports control tower and it doesn't find any transmissions. If I scan the frequencies, it obviously hears it fine. If I use my yeasu ft857 with an external antenna, it overloads the front end.

I've never (in the 5 days I"ve owned the scanner) been able to get anything but fm broadcast to trip the close call feature.

Yes, I checked to ensure the band was enabled.

Any suggestions?

Thanks!

That's exactly one thing I am considering doing in order to guage
activity levels in a certain band segment.

From: MCH
Topic: 1024 Message: 1026

This is a common 'complaint' (with both CC and SS-II).

You have to remember how these work. They detect a hit that is (approximately) 20 dB above the noise floor. The noise floor is either the true noise floor of the band - including any stray RF from things such as computers or other electronics, or the second weakest signal in the band when talking about these modes.

At an airport, you may have a strong Tower signal, but you also have ATIS, AWOS, and VOR transmitters in the same band - often at or near the same location, so not getting hits at an airport isn't always a sign that these modes are not working properly. To compound this, the transmitters used are usually low in power and this makes competition from other signals that much more likely.

FM Broadcast, on the other hand, uses transmitters usually in the KW (killoWatt) range, so getting 20 dB above any other signal in the band is easy since the signal is so strong.

The best way to find aircraft TXs is be using the SEARCH feature on any scanner. Remove the antenna to further reduce the chances of getting distant signals, as the local signals *should* be strong enough to still be received.

I went into Best Buy and walked around today with the BC346xt on my hip. When I came out I had their walkie talkie freq along with a bunch of FM radio freqs. I've been getting a lot of FM radio stuff on closs call but close call works and works good. Don't expect to sit under any radio tower and pick something up with it.

From: Kevin
Topic: 1006 Message: 1029

I did a little experimenting in my truck yesterday on my way to work. Like I noted in my review, there is better receive sensitivity across the board and only picked up a little intermod at the antenna farm where I work. However it was intermittent and filter'd out better than my 396T. But there is one thing that REALLY has me ticked off. It looks like I'm going to need a amplified speaker with the 396 XT. It's nowhere near as loud as my 396T on the external speaker in my truck. I remember that was one of the reasons I dumped the PSR 500. I'll play around a little more with it maybe someone else can come up with better results. I really don't want to run more wires and pay the excessive amount of $$ for the radio shack amplified speaker. I've played around with the blue tooth idea so maybe its time to take a serious look at it. Thanks

Kevin

There was a trick with the old Pro-93 and Pro-95 radios that may well apply to newer RS/GRE scanners and to Uniden. You could defeat a built-in attenuator on the phone jack by rigging a wire to short the plug to the antenna. This gave you full volume at the jack. Might work/might not on the BCD396XT?

BE CAREFULL !!! I remember this being talked about when the "T" came out. If I remember correctly, something about Uniden's audio circuitry didn't allow the shorting (I do it on my Pro-92 & Pro-96) at the jack, and would result in COSTLY repairs. I believe this is why there was a warning (again, going on memory) about using vehicular amplified speakers that used the vehicle's ground and external vehicle power at the same time.

I have had no problems with the volume level in general but if I connect the radio to a external speaker. The volume level is way too low but other than that it is just fine.

You have to remember that the jack on the scanner is an *earphone* jack, not an external speaker jack. Yes, there is a difference as you've found. Same with the 500. They are not designed to use used with external speakers.

You are never going to be 'satisfied' with the performance of plugging an external speaker into an earphone jack. Get the amplified speaker or get a unit with an external speaker jack - such as the BCD996T.

Sorry if this isn't the answer you wanted to hear, but it's the way it is. If you provided the level required for an external speaker at the earphone jack, you would end up with countless lawsuits from people who have damaged their hearing by excessive levels coming from the earphone jack. That's why there is a warning in the manual about only using approved devices in the earphone jack.

> But there is one thing that REALLY has me ticked off. It looks like I'm going to need a amplified speaker with the 396 XT. It's nowhere near as loud as my 396T on the external speaker in my truck. I remember that was one of the reasons I dumped the PSR 500. I'll play around a little more with it maybe someone else can come up with better results. I really don't want to run more wires and pay the excessive amount of $$ for the radio shack amplified speaker. I've played around with the blue tooth idea so maybe its time to take a serious look at it. Thanks

I do this all the time and find lots of frequencies, always worked fine for me, but this was on the BCD396t, I even do it at the local aviation RCAG, where UHF and VHF are transmitting simultaneous, still get plenty of hits.

Could be a bug or maybe the settings have changed from what you expect from the 396T, my guess anyhow.

JAN FINE wrote:

Remember that close call needs a fairly strong signal to register a "hit". Very often, especially at larger airports, the primary transmitters are not actually at the tower but at a remote location (perhaps on a hill relatively close to the airport).

And as someone else has mentioned, the power level of aircraft radios is pretty low since they use altitude to their advantage.

Thanks for everyone's response. I drove around a bit last night and It did work near a couple of paging towers and one law enforcement tower.

I'll bring it with me tomorrow to the opening day of the Kansas City Royals baseball season. There should be a ton of RF traffic there.

I'll report back.

Thanks again.

VHF and UHF airbands are in different frequency bands, and don't affect
each other with respect to Close Call operation.

Remember, crowded conditions are often not favorable for CC operation.
It means there is that much higher of a noise floor for the signal to
overcome in order to register as a hit.

With the rubber duck, close call's range is very limited. If you have a chance, try hooking it up to a mobile antenna, you will get way more hits. I've taken my 396 to Royals and Wizards games in my pocket and gotten quite a few hits even with a stubby antenna, but I was standing very close to the users.

Huh? That will come as a shock to the NFL Game Day Coordinators I know.

At my 'local' franchise (the current national champs), the only thing encrypted are the headsets worn by the offensive and defensive captains, and those are also switched on and off based on the time clock (they are switched off when the play clock is below 15 seconds, if I recall correctly).

There may be some business comms that is also encrypted or using a mode not supported by scanners, but for the most part little is encrypted - including the GDC comms. This *may* vary at different stadiums, but I was under the impression it did not.

BTW, there is a heck of a lot of frequencies in operation during the games. It's on the order of several hundred, and for the Superbowl that goes up by a factor of three. Yes, I know one of the guys who was doing the coordination at Tampa, too. BTW, many of these (about one third) are in frequency ranges not covered by the XT.

I'll also put a plug in for Uniden, as many of the GDC officials I know actually use Uniden scanners to monitor the activity if problems arise. Their 'model of choice' is the BR330. I'll let you figure out why (hint: think 'extended' frequency coverage).

I have been listening to my bcd 396xt so much that I have to keep charging my batteries all the time. This is a great radio and I am very happy I bought it. Glad that I can still use my old batteries from the bcd 396t that I sold on ebay. Just wonder if anyone else has had any experiences with their batteries and the radio yet. I am also still looking forward to finding some official reviews of the radio online too.

1051. BCD396XT Audio Popping Solved

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-11 05:17:11 UTC
From: Richard A. Victor
Topic: 1051 Message: 1051

I've posted previously about the popping noise that I hear when I record or amplify my 396XT's audio. In one of the other forums Bob the author of Proscan suggested that it might be a DC component on the audio and suggested that I try either a 10mf capacitor or a 1:1 audio transformer. I bought the parts yesterday and breadboarded them today so I could switch things in and out. The cap didn't help, but the transformer solved the problem. I then built a cord with the filter on one end in a small plastic case which seems to be working well. If you want to hear the audio clips which are about 3 minutes each, they are at YouSendIt.

https://www.yousendit.com/download/UmNLRGwrdzh6NFBIRGc9PQ

The two files of interest are unfiltered.mp3 and transformer.mp3 although there are also clips with the capacitor only and with the transformer and the capacitor together. It's particularly interesting to watch the waveform of the audio while listening with a program such as Goldwave.

73,
Dick

The LCD uses the most power to operate, having it off allows longer time between charges so I only have a couple channels that "light it up".

I thought of this recently, it would be nice to have two operational settings, one for when the power is from an external source where all the programmed lights are displayed and one for internal power, ie batteries that only allows say 6-10 lcd visual alerts and saves power when running on batteries.

My 396 xt with the supplied batteries has now been running continuously for almost eight hours. Voltage is 3.6, down from the full charge of 4.2, I'm sure it will shut down soon. I left it on overnight for logging purposes using free scan. Volume was set to 0, but I forgot to turn off the backlight (squelch on). I used the -2 setting.

My only problem, unrelated to the batteries, is that when I went to bed the log was filling up nicely, but this morning it was blank. I think it was my error, still thinking about that.

It could be a number of things causing the blank display in logging. Make sure you check the box so it saves automatically so you don't lose the log completely.

My 396 xt with the supplied batteries has now been running continuously for almost eight hours. Voltage is 3.6, down from the full charge of 4.2, I'm sure it will shut down soon. I left it on overnight for logging purposes using free scan. Volume was set to 0, but I forgot to turn off the backlight (squelch on). I used the -2 setting.

My only problem, unrelated to the batteries, is that when I went to bed the log was filling up nicely, but this morning it was blank. I think it was my error, still thinking about that.

I have been listening to my bcd 396xt so much that I have to keep charging my batteries all the time. This is a great radio and I am very happy I bought it. Glad that I can still use my old batteries from the bcd 396t that I sold on ebay. Just wonder if anyone else has had any experiences with their batteries and the radio yet. I am also still looking forward to finding some official reviews of the radio online too.

I don't think I have found a decent sounding hand held scanner since the old Fanon crystal unit I had in the 70's.
Thats the reason I am holding off on a 396 however I have an amplified speaker for my current pro-96 and the audio is fair.
I understand the pro-106 has a deeper audio which I assume will be translated through the headphone jack to the amplified speaker.
I was concerned about the tinny sound of the 396 and what may also be the same sound from the xt. I spend alot of time on the road and punchier audio is the deciding factor.
Still on the fence for either a 106 or a 396xt.

I did a little experimenting in my truck yesterday on my way to work. Like I noted in my review, there is better receive sensitivity across the board and only picked up a little intermod at the antenna farm where I work. However it was intermittent and filter'd out better than my 396T. But there is one thing that REALLY has me ticked off. It looks like I'm going to need a amplified speaker with the 396 XT. It's nowhere near as loud as my 396T on the external speaker in my truck. I remember that was one of the reasons I dumped the PSR 500. I'll play around a little more with it maybe someone else can come up with better results. I really don't want to run more wires and pay the excessive amount of $$ for the radio shack amplified speaker. I've played around with the blue tooth idea so maybe its time to take a serious look at it. Thanks

The keys also illuminate. The sysmbols show up white since the buttons are now a dark gray. I find it easier to use at night over the 396T.

Huh? My scanners operate about 12 hours without the BL, and 10 with it
on constant. That would seem to indicate that the BL only consumes about
18% of the power used. I would think the audio amp uses the most power
(depending on the level, of course).

Thanks for the reply John. I usually don't use the backlite a whole lot anyway but it does tend to use a lot of battery power when the light is on. Glad the rechargeable batteries last a long time though. PR 79

The LCD uses the most power to operate, having it off allows longer time
between charges so I only have a couple channels that "light it up".

I thought of this recently, it would be nice to have two operational
settings, one for when the power is from an external source where all the
programmed lights are displayed and one for internal power, ie batteries
that only allows say 6-10 lcd visual alerts and saves power when running on
batteries.

If you want really good, punchy audio, you probably need a mobile rather than a handheld.

I have a PSR600 and the audio is outstanding.

It could be a number of things causing the blank display in logging. Make

sure you check the box so it saves automatically so you don't lose the log

completely.

Glad that I can still use my old batteries from the bcd 396t that I sold on ebay. Just wonder if anyone else has had any experiences with their batteries and the radio yet. I am also still looking forward to finding some official reviews of the radio online too.

Topic: 1050 Message: 1072

Has anyone logged the difference in battery life when using the battery-saver mode. Just wondering how much difference it makes.

In regard to the RS106, i have its brother the GRE500, you can use a piece of thin wire from the base of the antenna connector to the plug in of the external speaker which shorts out the resister that lowers the audio for external use...The H/H scanner becomes very loud and clear...You cannot do this with Uniden products...I sold my 396t cause of poor grumbly audio and im still reading on the 396XT, i hear all say that the audio is remarkably better.....PS: The guy that spoke about the 6 channel Fannon Courier, well i still have mine sitting here for VHF firecalls, bought it in 73 from "Harvey Park Radio in Colorado, they uped the audio for ya as a special feature, man they don't build em like that anymore....Ron

I have a local PD that uses one freq but switches quite frequently to P-25. I have programmed the freq under "audio type" as "all". Will it allow me to enter a ctcss or NAC code for reception or will it remain in a "open" PL, if you will, while scanning?

You cannot because it is a contradiction in logic to say you want to hear everything, but be able to use selective reception methods. 'All' and 'some' are mutually exclusive terms.

Just program in the channel twice - once with the CTCSS, and again with the NAC. I would program in the P25 channel first since it's likely going to see the absence of the P25 data faster than the absence of the correct CTCSS. BTW, there are no scanners currently made that will allow you to enter both for the same channel and open on 'either'.

What you mean? Displaying Individual ID in P25 conventional (like is Digital ID Display in Moto)?

I am also want to see this feature and have no ideas why it's not yet implemented.

Very stranger.

When you reset the scanner it give you the option to restore the original systems. I saved them in freeware before I did anything else just in case. After you restore the scanner you might think about doing the same.

By the way Freeware has a version E out. It deals with the GPS problems for the XT radios. Also has a GPS lookup feature like ARC does.

As far as Unitrunker goes they just released a version that is supposed to work with the BC396xt.

Here's what I've figured out from the posts of a couple of other
helpful people. If you find any errors or things I've missed, please
let me know.

Check that the sr3 search key is still set to the default of
Bandscope by doing the following:

Menu
Search for ...
Set Search Key
Search Key 3
Band Scope
L/O to return

Then to enter Bandscope:

Hold
Func+sr3 (Should display the bandscope)

To Change Bandscope settings:

Hold
Func + scroll to change the MF (monitored frequency)
Will return to search after a few seconds or press L/O

To access the settings:

press "." to cycle to CF (center frequency), SPN (span), or STP (step)
Scroll in each flashing menu to change settings
Will return to search after a few seconds or press L/O

or

To change CF (center frequency), press "E"
type in the frequency
press "E" again

Scan to exit bandscope

Jan,

Where did you get the version of Unitrunker that works with the 396XT? I just checked the downloads section of Unitrunker and only see the 10/2008 version. That version is known to not work correctly with the 396XT.

1092. Charging time

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-14 07:16:10 UTC
From: Doug
Topic: 1092 Message: 1092

Does anyone know the ideal charging time for the 396XT? The factory default charging time on my unit was set to 16 hours, but in using various battery charging calculators I found online, they suggested a time of around 3 hours or so when factoring in the 2250 NiMH batteries with the 800 mA output charger supplied! My unit has been getting rather warm, and I don't want to shorten the battery life. Should I replace the charger with a 250 mA output charger? Then the charge time would indeed increase closer to 16 hours and maybe get less warm ???

1093. Re: [BCD396XT] Charging time

Yahoo group: BCD396XT (2008 — 2010)

From: Paul Opitz
Topic: 1092 Message: 1093

The output rating of the adapter does not mean that is the charge rate. The rate is actually set by components in the scanner itself, and (IIRC....sorry not at the office right now) is around 200-250 mA.

Never use an AC adapter other than the one recommended or supplied by the manufacturer.

So charging the batteries inside the BCD396xt does not harm the radio at all then? I have always charged my batteries inside the radio itself and actually noticed that the BCD396xt does not get as warm as the 396T did. I actually set 14 hours as the charge time for my batteries. I have heard that it is not good to charge the batteries inside the radio, so I just wanted to be clarified about it. All comments appreciated in advance. Thanks

There is very little chance that charging the batteries in the radio will hurt anything (as long as the batteries are the ones supplied with the scanner, or equivalent, and you use the supplied AC adapter or recommended DC adapter). In general, overcharging batteries reduces their total cycle life, however at the low charge rate provided by the scanner, most overcharge power is dissipated as heat. As long as the batteries are reasonably run down between charges, you will likely never notice the reduction.

You should also note that it is normal for NiMH batteries to become warm during the charge cycle. Unlike NiCd batteries (which are endothermic during charge an only get warm when they are overcharging), NiMH batteries are exothermic during normal charge.

So it sounds like there has been some improvements in the internal charging circuits in the new 396xt verse the older 396T. I haven't bought one yet this might just do it then!

The only real change is the ability to change the charge duration from the default. The charging circuit itself is substantially the same as all other scanners, regardless of brand (fixed rate, low-current charging).

From: mfdockery
Topic: 1098 Message: 1098

I was using a auto dc adapater on my 396XT yesterday and accidently had it set to 9 volts instead of 6 volts and had it connected to the scanner for about 5-10 seconds, the scanner would not power up so I checked the connection and then switched it back to 6 volts. The scanner works ok but do you think I did any damage to the unit by having it hooked up to 9 volts for a short time?

If you interrupt the charging cycle/duration, does it start over from the beginning, or carry on from where it was interrupted. EG. set for 12 hours, it charges for 10hrs, then you use it for 10 minuets, and shut it down does it start all over for another 12 hours.

I would imagine its fixed time. Power gets pulled, timer re-starts.

This is why you should *never* charge batteries in the scanner. Never.

Spend the $$ on a decent charger and it'll pay off. I sunk 50 bucks into that "does everything" Maha one and my 2 year old batteries have only lost about 100mAh.

The built in 396 charger cooks batteries. Don't use it. Period.

I'd agree on this. FYI - I tried just leaving the scanner plugged in the past 8 days charging the whole time after a complete draining of the batteries. We had a power outage for an hour and a half yesterday but during that entire 8 days the scanner never got hot.... thats a first! I'd say they did something in the design Paul as the T always got hot.

From: Peter Laws
Topic: 1106 Message: 1106

If you have UASD files with tones (DCS or CTCSS) and you import those files into FreeScan, it all works just fine .... except ... those channels get marked
"All" ,,, Which seems to mean that those tones will not be used. Grr.

Seems to me if a tone is set in the file you're importing, the other settings should allow those tones to be used!

Hello,

When you import .usd files from the BCD996T directory, if there are Conventional or TG Analog/Digital Flags, the software will correctly flag them as such, along with the correct CTCSS/DCS Tones. The issue I found is when you import .usd files from the BCD396T directory, there are Flag issues that will have to be corrected. The tones are imported, just the flags must be changed.

IOW, it's the *absence* of the flags in the 396 UASD files that are
causing the issue, and you're saying it would be nice if FreeScan would
intelligently add them to the file - setting the channels to ANALOG ONLY
if there is a CTCSS/CDCSS present.

Thanks VERY much, I was getting a bit frustrated with my new toy. I started to go wrong by pressing the Scan/Srch key instead of the 3/sr3. I appreciate the education.

Here's what I've figured out from the posts of a couple of other

helpful people. If you find any errors or things I've missed, please

let me know.

Check that the sr3 search key is still set to the default of

Bandscope by doing the following:

Menu

Search for ...

Set Search Key

Search Key 3

Band Scope

L/O to return

Then to enter Bandscope:

Hold

Func+sr3 (Should display the bandscope)

To Change Bandscope settings:

Hold

Func + scroll to change the MF (monitored frequency)

Will return to search after a few seconds or press L/O

To access the settings:

press "." to cycle to CF (center frequency), SPN (span), or STP (step)

Scroll in each flashing menu to change settings

Will return to search after a few seconds or press L/O

or

To change CF (center frequency), press "E"

type in the frequency

press "E" again

Scan to exit bandscope

Not "nice" - that's the way it should function. There is no other
reason for a CTCSS or DCS tone to be in a UASD file (for a 396T), so
of course that tone should function once imported into FreeScan (and
subsequently written out to a radio).

Well, I would point out that it *should* only import the data that exists (and it does that), and since there is no A/D flag in the file, it should not make one up. But, it would be *nice* if it would do that.

It's a matter of importing what is there vs making assumptions about the data and changing a flag based on that assumption - no matter how much it may make sense to us. "Assume" still has ways of being broken down into three words.

What else should it assume? That you want the same opening screen name? That you want the same options (such as CC-DND enabled even though it was disabled in the 396 because it was only CC)?

I AGREE with you that it would be nice if that flag were assumed, but I don't agree that it should be adding flags to files when they don't exist in the original files.

Hello,

When you import .usd files from the BCD996T directory, if there are Conventional or TG Analog/Digital Flags, the software will correctly flag them as such, along with the correct CTCSS/DCS Tones. The issue I found is when you import .usd files from the BCD396T directory, there are Flag issues that will have to be corrected. The tones are imported, just the flags must be changed.

Derek,

You have to be in search mode for the bandscope to be available. As an example, if you want to see the scope centered on 450 MHz, and assuming you are in some type of scan mode, enter the following sequence:

Hold
450.0
Hold

You should now be holding on 450 MHz, in Quick Search mode. Now press

Function->3 (i.e., sr3)

You should now have the bandscope showing, centered on 450 MHz.

That'll work fine if you still have the bandscope set as the choice
for sr3. The problem is that some software will clear that setting
when it uploads frequencies to the scanner leaving sr3 unset. If
that's the case, one will get very frustrated with this method. Best
bet is to reset sr3 to bandscope first so that you can then proceed
as you've suggested.

As the title suggests (perhaps UPMan could answer this), will Uniden be releasing their own software?

I am using PROSCAN and it is in my opinion the best of the two currently available, but I prefer the Uniden domestic product, I have used it with the 396 and 996 and would like to keep things standard.

Being in Australia, the PROSCAN will not work with the local products because of the different firmware.

Yes. He had stated (perhaps on the RR forums? and maybe even here) that the Uniden software would be released shortly after the BCD396XT. I don't believe any specific date or timeframe was mentioned.

1121. 396XT Missing First Part Of Transmission

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-16 21:15:42 UTC
From: walt991
Topic: 1121 Message: 1121

Over the past week, I noticed that when a P25 talkgroup becomes active, sometimes I miss the first syllable or so of the transmission. At first I thought this was due to the amount of time it takes to scan through all the channels. But, after trying a bunch of different settings, I decided to hold on one talkgroup and compare the transmissions with my PSR-500. Sure enough, even when holding, I miss the very first part of many transmissions on the XT. The PSR-500 has audio for a brief second prior to the 396XT having audio.

I checked to make sure that I don't have close call enabled, no priority channels are set, weather scan is disabled, battery saver function is turned off, etc.

Any ideas on what else I can check, or change to make the XT receive faster? I cannot find an option to change the P25 waiting time as this is a pure P25 system that I am monitoring. It really seems like the delay that is associated with the P25 wait time but I don't see that setting anywhere for a P25 system.

Can others out there with P25 only systems confirm what I am hearing?
Does the 996 react this way? I

I have a similar problem with my 396T when listening to 800 MHz analog trunking. It always cuts of the half a second of the conversation. Any ideas? My old 780XLT doesn't do this.

1126. Another Two Tone Decode Question

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-17 03:31:41 UTC
From: rehmj@sbcglobal.net
Topic: 1126 Message: 1126

Alright. I have figured out how to work it. It is fantastic. Even have it monitoring two channels at once. Unfortunately I have a question. This is my example.
I have one FD on one frequency. There are two units that get toned out. Here are their tones respectfully in the search mode.

Unit 1
Tone A 669.7
Tone B 634.1

Unit 2
Tone A 1733.7
Tone B 489.7

Still in search mode the same units get toned again however this is what shows up...

Unit 1
Tone A 670.1
Tone B 634.8

Unit 2
Tone A 1733.6
Tone B 489.5

As you can see they are a little different. If I program either set, will they work? How much can the tone freq be off before it does not work? Is there a built in error rate?

Thanks for the help.

Arc 396 works the best for me. Well worth the money.

Not an issue. To avoid the technical, on a relatively short tone
duration, it's impossible (at a reasonable cost) to get perfectly
accurate. Split the difference and it should be just fine.

If it's a true P25 system, no 'waiting time' is required, as the scanner should start decoding P25 immediately since it doesn't have to determine if it's an analog or digital signal (all P25 systems use exclusively P25 modulation). It could be waiting to see if it's encrypted.

Joe M.

walt991 wrote:
> Over the past week, I noticed that when a P25 talkgroup becomes active, sometimes I miss the first syllable or so of the transmission. At first I thought this was due to the amount of time it takes to scan through all the channels. But, after trying a bunch of different settings, I decided to hold on one talkgroup and compare the transmissions with my PSR-500. Sure enough, even when holding, I miss the very first part of many transmissions on the XT. The PSR-500 has audio for a brief second prior to the 396XT having audio.

Assuming they are using a Motorola system, and it appears they are, the
actual tones used would be:

Unit 1
Tone A 669.9
Tone B 634.5

Unit 2
Tone A 1733.7
Tone B 489.8

Yes, the decoder is not exact. No decoder is, but as you can tell it
gets pretty close to the exact tone, and just about any tones decoded
should work. The XT has one of the best SW based decoders I've seen -
bar none - including industry test equipment.

And I recently discovered that I am missing a half-second at the beginning of some transmissions on my 996 (comparing it next to a Pro-106). This happens when monitoring a P25 700 MHz system (haven't tried other systems). I can live with it (especially since a lot of the traffic is encrypted so I'm missing a lot anyway, and not to mention that I prefer the audio on the 996 better than the 106), but I hope that if any solutions are suggested for the 396XT that they might apply to the 996 as well.

Set your analog-only channels to Analog. This will prevent the scanner from applying the P25 Waiting time to the channel (default 400 mS).

I have a similar problem with my 396T when listening to 800 MHz analog trunking. It always cuts of the half a second of the conversation. Any ideas? My old 780XLT doesn't do this.

Turn off the P25 decode delay. It's set to 400 ms by default.

Ok,
So i jumped head first into the 396xt programming using proscan. it took a little bit to figure out but i think i'm working my personal bugs out. just so everyone knows where i'm coming from, up to now i was using a 250D without the P25 card. P25 is a whole other issue for me...probably a different thread. lol. what i'm looking for is a little bit of ease of use. what is the simple way to tune to a specific group without having to scroll through every other group and freq to get to it. i'm guessing that's what the "quick keys" are for. i haven't figured out how to navigate with those yet. everytime i try to put in the quick key the scanner says it's not stored which i know it is because it shows it after i assigned it in the software....YES I UPLOADED IT TO THE SCANNER :-)

any help with this would be awesome. it would be cool if there was a tutorial on navigating the "systems" in the scanner. is there one?!!?

Yes, its a true P25 system and it doesn't start decoding immediately.

From: policescannernut
Topic: 1136 Message: 1136

Using Freescan I uploaded my old BCD396T .usd files. One file in particular was a Motorola Type II that had the iCall wild card programmed in as 700000 along with several specific 7######. They uploaded with no errors into my new BCD396XT however those channels are silent. Three questions...

1) What is the wild card now for iCalls on Motorola Type II?

2) What is the conversion from the old 7###### iCall numbers to the new numbers?

3) Is the iCall feature available now on P25 Digital?

Thanks for your help!

Your title says "Number Tags" but your message says "Quick Keys." Those are different things.

If you've assigned a quick key to a system (or site for multi-site types), to quickly turn that system/site on or off, press the SQK (system/site quick key) while scanning. For two-digit SQK's press [./no] first.

If you've assigned a System Number Tag (SNT) to a system and a Channel Number Tag (CHNT) to a channel within that system, to go directly ot that channel press HOLD snt.chnt MENU.

iCalls are now automatic in Id-Search, in ID-Scan use the wildcard ".0" saved in a channel. It works for Motorola, EDACS, and P25 systems.

Getting closer, anyway.

SQKs (System/Site Quick Keys) can be 0-99. For one-digit SQK's you just hit the single digit while scanning. For two-digit SQK's you precede the two digits with [./no] (i.e. [./no] [5] [2] for SQK 52).

p

To enter the wildcard in FreeSCAN, simply create a channel and assign it the TGID of i0

When you upload to your scanner it will be changed to the new format.

You're confusing yourself when you use the generic term "Quick Keys" because there are two kinds:

System Quick Keys (SQK) 0-99 that are used to select Systems (and/or Sites within systems) and

Group Quick Keys (GQK) 0-9 (within each System) that are used to enable/disable groups of channels or talkgroups

Most of the time, you'll assign a different SQK to each system or site within a system. Sometimes, though, you might want to use the same SQK for two systems. An example might be a trunking system for the police in a town, and a conventional system with the fire channels for that same town. You might decide that you always want to listen to them both at the same time, or neither of them, but never one or the other. Then you could assign them to the same SQK and turn them on or off together.

GQK 3 for System 23 is entirely different from GQK 3 for system 46. You can make them have the same meaning if you want; for example you could always put Police channels on GQK 1, Fire on QGK 2, etc. That's the way some folks do it to make it easier to remember. But that's too inflexible for me, in a big city, where I have many different Police channels, and I may not want to listen to all of them at any given time. So I put them in different groups within the systems. There's a method to my madness, though, as you'll see below.

You asked for a sample: Here's a complicated one that should give you the big picture. It's ONE way to setup the scanner, and it works for me. YOU probably have different requirements and should design your own layout FIRST, then start programming the scanner.

Key to all of this is to think about how you want to selectively listen. Is it important to you to turn off all Fire traffic and just listen to police. Okay, now do you want to listen to all Police traffic, or just dispatch? All departments? Or maybe only one or two special ones.? Do you travel, and want to exclude radio systems in entire areas today so you're not bothered by noisy channels, but tomorrow when you're in that area, you need to listen to these same systems.

Once you've determined WHO and HOW you want to listen (or not listen), then and only then start collecting frequencies and system types, and channels/talkgroups etc. from books, or Radio Reference, or wherever you get that information for your area. Don't even worry about it until you've done the first part.

You've got a huge amount of flexibility with these radios. You probably won't get the layout right the first time. But it's important to have a plan before you start programming. (And you also have to get used to thinking of zero as 10, because in Uniden-think it comes after 9 and not before 1.)

The first thing I did was wipe out all of the factory programming. That's there to just get you "working radio out of the box". You can certainly do a lot better.

I'm a dispatcher for Maricopa County Sheriff, so guess what I listen to most ..

(I apologize for the leading .. in the following but without them, the browser would squash everything to the left and you wouldn't see the important indentation)

System 1 Maricopa County Regional trunking system

....Site 1 - Central Courts Building (SQK 1 or .01)

..Site 11 - East County Court Building (SQK 11 or .11)

..Site 12 - Gila Bend (SQK 12 or .12)

....Site 13 - White Tanks (SQK 13 or .13)

....Site 14 - Thompson Peak (SQK 14 or .14)

....Sites 15-19 (SQK 15 or .15 thru .19) are similar

....Group 1 - East Talkgroups (GQK 1)

........East Main

........East Car to Car

....Group 2 - West Talkgroups (GQK 2)

........West Main

........West Car to Car

....Group 3 - Lake Patrol (GQK 3)

........Lakes 1

........Lakes 2

....Group 4 - Info (GQK 4)

........Info

........Central

....Group 5 - East Hot (GQK 5)

........East TAC

........East Emergency

....Group 6 - West Hot (GQK 6)

........West TAC

.....West Emergency

....Groups 7-9 (GQK 7 thru GQK 9) Affliated Cities

..Group 0 - (GQK 0) - Miscellaneous (Jails, county attorney, probation etc.)

System 2 Phoenix Regional Wireless Cooperative (RWC)

....Site 2 (SQK 2 or .02) - Simulcast A

....Site 21 (SQK 21 or .21) - Simulcast C (Sky Harbor area)

....Group 1 (GQK 1) - North Hot

.....Precinct 600 Hot

.....Precinct 900 Hot

....Group 2 (GQK 2) - Central Hot

.....Precinct 500 Hot

.....Precinct 700 Hot

....Group 3 (GQK 3) - South Hot

.....Precinct 400 Hot

.....Precinct 800 Hot

....Group 4 (GQK 4) - 400 Precinct

.....400 Dispatch

.....400 Alternate

....Group 5 (GQK 5) - 500 Precinct

.....500 Dispatch

.....500 Alternate

..... etc for 6 thru 8

....Group 9 (GQK 9) - 500 Precinct

.....900 Dispatch

.....900 Alternate

....Group 0 (GQK 0) - Sky Harbor Airport

....PD airport dispatch

.....Oscar Units

.....Parking Units

System 3 (SQK 3 or .03) is Phoenix Fire, and looks very much like System 2, except it has sites 3 and 31 (SQK 3 or .03 and 31 or .31) with fire channels/talkgroups grouped by Group 1 Alarm, Group 2 Violent Incidents, Groups 3-9 Fireground channels, and group 0-Investigators,etc.

I have a second Fire System - SQK 39 - that has conventional frequencies that they are still using, and it has the same breakdown of groups, plus it has the "other" fire department in the area, Rural Metro, in group 0. I could've reused SQK 3 for this system instead of 39 if I always wanted them both on or off together, but while they're still testing on System 3, I wanted to be able to turn it off independently. Maybe a few years from now, I'll put them both on 3.

System 38 (SQK 38 or .38) is all the Tonto Forest and other Wildfire frequencies for areas near me. The GQK 1 thru 0 groups within this system are used to segregate fire-fighting teams and areas.

System 4 (SQK 4 or .04) is AZ Department of public Safety (Conventional system)

....Group 1 - Metro East Frequencies

....Group 2 - Metro Central Frequencies

....Group 3 - Metro West Frequencies

System 41 (SQK 41) on the other hand, is a different layout of all of the DPS frequencies that I use when I traveling in Arizona.

..Group 1 - District 1

..Group 2 - District 2

....Group 3 thru 0.. Etc.

System 5 is Mesa's part of the regional wireless system and looks very much like System 2, except the precincts are Mesa and Gilbert Police and their respective Fire areas and follow their numbering system

System 6 is Scottsdale Police (SQK 6) (who use the Maricopa county radio system - system 1)

....Site 6 (SQK 6) is Thompson Peak (same as site .14 for frequencies)

....Group 1 is Scottsdale PD North

....Group 2 is Scottsdale PD South

....Group 3 is Scottsdale PD Info

....Group 4 is Scottsdale PD Detectives

.... . etc.

Why did I put Scottsdale as a separate system instead of putting their talkgroups on System 1? Because there were too many talkgroups when you combine them that way, and because I don't usually listen to Scottsdale. So I can use

SQK 6 or .06 to enable/disable Scottsdale, independently of system 1.

There is a hidden cost, though. When I'm scanning the tower for Scottsdale (SQK 6), I can only get Scottsdale talk groups, and when I'm scanning that same tower as part of SQK .14, I can only get Maricopa county talk groups and not the Scottsdale talk groups.

Decisions, decisions !....

Systems 61 thru 69 are conventional frequency systems that enable/disable police and fire in counties that surround Phoenix. If I'm not in a particular area, I don't enable that area.

Systems 71 thru 70 (SQK 71 or .71 thru SQK 70 or .70) are reserved by me for temporary systems that I insert when I'm traveling; so if I'm going from Arizona thru NM, TX, OK, and KS, then I would number the systems 71 for NM, 72 for TX, 73 for OK, and 74 thru 79 for KS. That way, as I drive thru each state, I can enable that state and disable it when I get to the next.

.

System 81 is Buckeye Police

....Site 81 (SQK 81) is main (only) Buckeye PD site

....Group 1 (GQK 1) PD Dispatch

.....PD Dispatch

.....PD Alternate

....Group 2 (GQK 2) is PD Talk

.....PD Info

.....PD Car to Car

System 91 is Sky Harbor Air Frequencies

....Group 1 - Tower

....Group 2 - Approach

....Group 3 - Departure

....Group 0 - Emergency frequencies

System 92 is Luke AFB aircraft

....Groups 1 thru 9 for the different squadron frequencies

....Group 0 - Emegency

System 99 is MURS/GMRS/Business

....Group 1 for FRS

....Group 2 for Itinerant Business Frequencies

....Group 0 for Emegency Frequencies

Some of the rationale:

. I arrange sites and groups so I can include or exclude:

o Dispatcher channels

o Chat channels

o Boring (info/wants/warrant checks, etc.) channels

o Training / Jail / Admin channels

o Law Enforcement / Fire / Medical / Business / Aircraft

. I also arrange sites and groups so I can include or exclude areas

o If I'm in Phoenix on the northeast side, I don't want to listen to South Hot, or the 400 or 800 Precincts, so I can turn them off with GQK's 3,4, and 8.

o Likewise, if I'm on the Northeast side, there's not much sense have the Sky Harbor airport site turned on at all, since I won't receive it reliably, so I can turn it on/off with SQK 21

. If I do or don't want to listen to Maricopa County (any site), I know that all of the sites are in the 1, and 11 thru 10 series, so it's simple to check if I've got them enabled

o Pressing .0 will show me whether .01 is enabled or not

o Pressing .1 will shoe me which of the .11 thru .10 sites are enabled.

. Similary if I want to stop listen to Phoenix Law Enforcement, all those sites and systems are 2 and the 21 thru 20 series

o Pressing .0 shows me wether .02 is enabled or not

o Pressing .2 shows me which of the .21 thru .20 SQK's are enabled.

. Using the Group Quick Keys for any of the systems that I'm scanning allows me to shut off traffic I'm not interested in, or areas that I'm not interested in for that particular system.

. Some of the numbers I picked for some things are meaningful in context

o For Phoenix RWC, GQK 4 is 400 precinct, GQK 5 is 500 Precinct, etc.

o Phoenix Fire Fireground channels are numbered and I use similar numbers for my groups.

o DPS districts are numbered and if I'm traveling around the state, I can enable/disable the districts in System 41 appropriately using Group Quick Keys that are the same as the district numbers.

I know I threw a lot at you - but if you don't plan for the big picture now, you'll be redoing your layout repeatedly.

And finally, with the XT, I can finally lay out my systems/sites/groups/channels exactly the same on the handheld as I do for my mobile 996T. Thank you Uniden !

GOT IT! Amidst that confusion I totally got it. It all makes sense now. Now as far as the "Quick Keys" go, they are only 0-9 and can ONLY be utilized in scan mode, correct? An example would totally paint the picture....if you don't mind. :-)

Your title says "Number Tags" but your message says "Quick Keys." Those are different things.

If you've assigned a quick key to a system (or site for multi-site types), to quickly turn that system/site on or off, press the SQK (system/site quick key) while scanning. For two-digit SQK's press [./no] first.

If you've assigned a System Number Tag (SNT) to a system and a Channel Number Tag (CHNT) to a channel within that system, to go directly ot that channel press HOLD snt.chnt MENU.

Ok,
So i jumped head first into the 396xt programming using proscan. it took a little bit to figure out but i think i'm working my personal bugs out. just so everyone knows where i'm coming from, up to now i was using a 250D without the

P25 card. P25 is a whole other issue for me...probably a different thread. lol.. what i'm looking for is a little bit of ease of use. what is the simple way to tune to a specific group without having to scroll through every other group and freq to get to it. i'm guessing that's what the "quick keys" are for. i haven't figured out how to navigate with those yet. everytime i try to put in the quick key the scanner says it's not stored which i know it is because it shows it after i assigned it in the software.... YES I UPLOADED IT TO THE SCANNER :-)

any help with this would be awesome. it would be cool if there was a tutorial on navigating the "systems" in the scanner. is there one?!!?

Subject: Re: [BCD396XT] Another Two Tone Decode Question

Assuming they are using a Motorola system, and it appears they are, the
actual tones used would be:

Unit 1
Tone A 669.9
Tone B 634.5

Unit 2
Tone A 1733.7
Tone B 489.8

Yes, the decoder is not exact. No decoder is, but as you can tell it
gets pretty close to the exact tone, and just about any tones decoded
should work. The XT has one of the best SW based decoders I've seen -
bar none - including industry test equipment.

Topic: 1134 Message: 1144

Thanks for sharing your setup. I did something similar for my setup, separating the SQK's by geographic regions. A challenge I'm having is remembering what SQK's I assigned to each system. I've considered printing out a reference until I can memorize the SQK's, like I did with my state's 10 codes.

Coming from the 245XLT handheld scanner, the concept of simply filling up the scanner's memory with frequencies and TG's, and then assigning SQK's and GQK's was totally foreign to me, and it was a while before I figures out what I was doing. (not to beat a dead horse, but this is where a manual with more user-friendly tutorials, much like past Uniden scanner manuals would have been very helpful)

I still haven't come close to understanding or using all of the features of the BCD396XLT, but as I discover a need for a feature, I end up figuring out how to use it by trial and error and by piecing together clues from the Complete Reference.PDF and the wiki.

> into three words.

First of all, if a CTCSS/DCS tone, or a search for the same, is set in a UASD file from a 396T, it's not an *assumption* to say that the channel should be set to "analog" -- it's the only way they will work!

Second, this appears to be a defect introduced with .8E. I've only ever imported two sets of channels. One is for "home", which was done with .8D and the other was for travel to Chicago, which I did with .8E.

The import under .8D did exactly as I expect: if a tone or a tone search was set, the channel was set to Analog; if not, it was set to All. Under .8E? Not so much.

When is UASD coming out again?

I'm a little confused. In another message someone said to program ".0" into a TG channel. Also, if you program "i0" (or whatever it is) into a TG to enable the I-Call wildcard while ID scanning a system, does it have to be in an active group, or is there a way to do it globally for a system with ID scan? If so, does this mean that you have to program this into each group that may be active if you want to pick up any and all I-Call's? Thanks!

You can enter ".0" when you are entering an iCall wildcard through the front panel. But in when editing in FreeSCAN it is entered as i0 . The reason for this difference is because there is no "i" key on the scanner so the "." substitutes for it. You'll notice when you enter . on the front panel it appears as an "i" on the screen. So you are inputting the same i0 either way.

(Now I'm not an expert on i-Calls so someone correct me if I'm wrong on this) To get iCalls, you need to have the iCall wildcard in a group for every system you are interested in. That group needs to be enabled. You also have to be in ID SEARCH mode and have the "Enable ICalls" option selected in the system settings.
Once you do all of that, it should work.:)

I think you are wrong.
If you enable iCall on a system and are in search mode the iCall will come up. When you put the wildcard into a memory channel you can be in scan mode. When the scanner goes to the memory channel that the wildcard is in you will hear all iCalls.

Dan,

That was a great explanation of how you arrange systems and groups
and why. I've been scanning for a long time and still got some valuable ideas.

Thanks!

Well gee Dan, I see great minds think alike. I had an idea about laying out my system but my problem is I'm impatient. I started by putting one system in and that was Orange County (I'm a dispatcher too but for FD). I listen to our channels no matter where I am and I also have the Sherrif's groups programmed. Beyond that I programmed our medcom channels and Orlando International's freqs. I did all of this using the "import from RR" feature on Proscan....I've been spoiled. lol. You were right, I re-loaded everything for the second time today and I've only had the radio for about 3 or 4 days. The reason I did it was because I was interested to see how the "control channel only" works and so far it's just the same with half the work. I had a question about the sites. Do the individual sites have to be programmed seperately or can all the freqs for the system be put into one "site" on the scanner?

Bottom line, my goal is to have it setup to where I can easily select the "systems" I'm in the mood, or "situation" to listen to. It's looking like the programming is 95% of accomplishing that. I honestly have about 3 different systems I want to listen to but not all at the same time. I also listen to local aviation quite a bit so it seems pretty simple in the grand scheme. I need to get a grip on the "quick keys" and the different types and I think I'll be ok.

Any other info would be appreciated...don't be shy.

-THANKS!
Dan F.

Subject: RE: [BCD396XT] Number Tags in General

You're confusing yourself when you use the generic term "Quick Keys" because there are two kinds:

System Quick Keys (SQK) 0-99 that are used to select Systems (and/or Sites within systems) and

Group Quick Keys (GQK) 0-9 (within each System) that are used to enable/disable groups of channels or talkgroups

Most of the time, you'll assign a different SQK to each system or site within a system. Sometimes, though, you might want to use the same SQK for two systems. An example might be a trunking system for the police in a town, and a conventional system with the fire channels for that same town. You might decide that you always want to listen to them both at the same time, or neither of them, but never one or the other. Then you could assign them to the same SQK and turn them on or off together.

GQK 3 for System 23 is entirely different from GQK 3 for system 46. You can make them have the same meaning if you want; for example you could always put Police channels on GQK 1, Fire on QGK 2, etc. That's the way some folks do it to make it easier to remember. But that's too inflexible for me, in a big city, where I have many different Police channels, and I may not want to listen to all of them at any given time. So I put them in different groups within the systems. There's a method to my madness, though, as you'll see below.

You asked for a sample: Here's a complicated one that should give you the big picture. It's ONE way to setup the scanner, and it works for me. YOU probably have different requirements and should design your own layout FIRST, then start programming the scanner.

Key to all of this is to think about how you want to selectively listen. Is it important to you to turn off all Fire traffic and just listen to police. Okay, now do you want to listen to all Police traffic, or just dispatch? All departments? Or maybe only one or two special ones.? Do you travel, and want to exclude radio systems in entire areas today so you're not bothered by noisy channels, but tomorrow when you're in that area, you need to listen to these same systems.

Once you've determined WHO and HOW you want to listen (or not listen), then and only then start collecting frequencies and system types, and channels/talkgroups etc. from books, or Radio Reference, or wherever you get that information for your area. Don't even worry about it until you've done the first part.

You've got a huge amount of flexibility with these radios. You probably won't get the layout right the first time. But it's important to have a plan before you start programming. (And you also have to get used to thinking of zero as 10, because in Uniden-think it comes after 9 and not before 1.)

The first thing I did was wipe out all of the factory programming. That's there to just get you "working radio out of the box". You can certainly do a lot better.

I'm a dispatcher for Maricopa County Sheriff, so guess what I listen to most ..

(I apologize for the leading .. in the following but without them, the browser would squash everything to the left and you wouldn't see the important indentation)

System 1 Maricopa County Regional trunking system

....Site 1 - Central Courts Building (SQK 1 or .01)

..Site 11 - East County Court Building (SQK 11 or .11)

..Site 12 - Gila Bend (SQK 12 or .12)

....Site 13 - White Tanks (SQK 13 or .13)

....Site 14 - Thompson Peak (SQK 14 or .14)

....Sites 15-19 (SQK 15 or .15 thru .19) are similar

....Group 1 - East Talkgroups (GQK 1)

.....East Main

.....East Car to Car

....Group 2 - West Talkgroups (GQK 2)

.....West Main

.....West Car to Car

....Group 3 - Lake Patrol (GQK 3)

.....Lakes 1

.....Lakes 2

....Group 4 - Info (GQK 4)

.....Info

.....Central

....Group 5 - East Hot (GQK 5)

.....East TAC

.....East Emergency

....Group 6 - West Hot (GQK 6)

.....West TAC

.....West Emergency

....Groups 7-9 (GQK 7 thru GQK 9) Affliated Cities

..Group 0 - (GQK 0) - Miscellaneous (Jails, county attorney, probation etc.)

System 2 Phoenix Regional Wireless Cooperative (RWC)

....Site 2 (SQK 2 or .02) - Simulcast A

....Site 21 (SQK 21 or .21) - Simulcast C (Sky Harbor area)

....Group 1 (GQK 1) - North Hot

.....Precinct 600 Hot

.....Precinct 900 Hot

....Group 2 (GQK 2) - Central Hot

.....Precinct 500 Hot

.....Precinct 700 Hot

....Group 3 (GQK 3) - South Hot

.....Precinct 400 Hot

.....Precinct 800 Hot

....Group 4 (GQK 4) - 400 Precinct

.....400 Dispatch

.....400 Alternate

....Group 5 (GQK 5) - 500 Precinct

.....500 Dispatch

.....500 Alternate

..... etc for 6 thru 8

....Group 9 (GQK 9) - 500 Precinct

.....900 Dispatch

.....900 Alternate

....Group 0 (GQK 0) - Sky Harbor Airport

....PD airport dispatch

.....Oscar Units

.....Parking Units

System 3 (SQK 3 or .03) is Phoenix Fire, and looks very much like System 2, except it has sites 3 and 31 (SQK 3 or .03 and 31 or .31) with fire channels/talkgroups grouped by Group 1 Alarm, Group 2 Violent Incidents, Groups 3-9 Fireground channels, and group 0-Investigators, etc.

I have a second Fire System - SQK 39 - that has conventional frequencies that they are still using, and it has the same breakdown of groups, plus it has the "other" fire department in the area, Rural Metro, in group 0. I could've reused SQK 3 for this system instead of 39 if I always wanted them both on or off together, but while they're still testing on System 3, I wanted to be able to turn it off independently. Maybe a few years from now, I'll put them both on 3.

System 38 (SQK 38 or .38) is all the Tonto Forest and other Wildfire frequencies for areas near me. The GQK 1 thru 0 groups within this system are used to segregate fire-fighting teams and areas.

System 4 (SQK 4 or .04) is AZ Department of public Safety (Conventional system)

....Group 1 - Metro East Frequencies

....Group 2 - Metro Central Frequencies

....Group 3 - Metro West Frequencies

System 41 (SQK 41) on the other hand, is a different layout of all of the DPS frequencies that I use when I traveling in Arizona.

..Group 1 - District 1

..Group 2 - District 2

....Group 3 thru 0.. Etc.

System 5 is Mesa's part of the regional wireless system and looks very much like System 2, except the precincts are Mesa and Gilbert Police and their respective Fire areas and follow their numbering system

System 6 is Scottsdale Police (SQK 6) (who use the Maricopa county radio system - system 1)

....Site 6 (SQK 6) is Thompson Peak (same as site .14 for frequencies)

....Group 1 is Scottsdale PD North

....Group 2 is Scottsdale PD South

....Group 3 is Scottsdale PD Info

....Group 4 is Scottsdale PD Detectives

.... . etc.

Why did I put Scottsdale as a separate system instead of putting their talkgroups on System 1? Because there were too many talkgroups when you combine them that way, and because I don't usually listen to Scottsdale. So I can use SQK 6 or .06 to enable/disable Scottsdale, independently of system 1.

There is a hidden cost, though. When I'm scanning the tower for Scottsdale (SQK 6), I can only get Scottsdale talk groups, and when I'm scanning that same tower as part of SQK .14, I can only get Maricopa county talk groups and not the Scottsdale talk groups.

Decisions, decisions !....

Systems 61 thru 69 are conventional frequency systems that enable/disable police and fire in counties that surround Phoenix. If I'm not in a particular area, I don't enable that area.

Systems 71 thru 70 (SQK 71 or .71 thru SQK 70 or .70) are reserved by me for temporary systems that I insert when I'm traveling; so if I'm going from Arizona thru NM, TX, OK, and KS, then I would number the systems 71 for NM, 72 for TX, 73 for OK, and 74 thru 79 for KS. That way, as I drive thru each state, I can enable that state and disable it when I get to the next.

.

System 81 is Buckeye Police

....Site 81 (SQK 81) is main (only) Buckeye PD site

....Group 1 (GQK 1) PD Dispatch

.....PD Dispatch

.....PD Alternate

....Group 2 (GQK 2) is PD Talk

.....PD Info

.....PD Car to Car

System 91 is Sky Harbor Air Frequencies

....Group 1 - Tower

....Group 2 - Approach

....Group 3 - Departure

....Group 0 - Emergency frequencies

System 92 is Luke AFB aircraft

....Groups 1 thru 9 for the different squadron frequencies

....Group 0 - Emegency

System 99 is MURS/GMRS/Business

....Group 1 for FRS

....Group 2 for Itinerant Business Frequencies

....Group 0 for Emegency Frequencies

Some of the rationale:

. I arrange sites and groups so I can include or exclude:

o Dispatcher channels

o Chat channels

o Boring (info/wants/ warrant checks, etc.) channels

o Training / Jail / Admin channels

o Law Enforcement / Fire / Medical / Business / Aircraft

. I also arrange sites and groups so I can include or exclude areas

o If I'm in Phoenix on the northeast side, I don't want to listen to South Hot, or the 400 or 800 Precincts, so I can turn them off with GQK's 3,4, and 8.

o Likewise, if I'm on the Northeast side, there's not much sense have the Sky Harbor airport site turned on at all, since I won't receive it reliably, so I can turn it on/off with SQK 21

. If I do or don't want to listen to Maricopa County (any site), I know that all of the sites are in the 1, and 11 thru 10 series, so it's simple to check if I've got them enabled

o Pressing .0 will show me whether .01 is enabled or not

o Pressing .1 will shoe me which of the .11 thru .10 sites are enabled.

. Similary if I want to stop listen to Phoenix Law Enforcement, all those sites and systems are 2 and the 21 thru 20 series

o Pressing .0 shows me wether .02 is enabled or not

o Pressing .2 shows me which of the .21 thru .20 SQK's are enabled.

. Using the Group Quick Keys for any of the systems that I'm scanning allows me to shut off traffic I'm not interested in, or areas that I'm not interested in for that particular system.

. Some of the numbers I picked for some things are meaningful in context

o For Phoenix RWC, GQK 4 is 400 precinct, GQK 5 is 500 Precinct, etc.

o Phoenix Fire Fireground channels are numbered and I use similar numbers for my groups.

o DPS districts are numbered and if I'm traveling around the state, I can enable/disable the districts in System 41 appropriately using Group Quick Keys that are the same as the district numbers.

I know I threw a lot at you - but if you don't plan for the big picture now, you'll be redoing your layout repeatedly.

And finally, with the XT, I can finally lay out my systems/sites/ groups/channels exactly the same on the handheld as I do for my mobile 996T. Thank you Uniden !

GOT IT! Amidst that confusion I totally got it. It all makes sense now. Now as far as the "Quick Keys" go, they are only 0-9 and can ONLY be utilized in scan

mode, correct? An example would totally paint the picture....if you don't mind.
:-)

Subject: Re: [BCD396XT] Number Tags in General

Your title says "Number Tags" but your message says "Quick Keys." Those are
different things.

If you've assigned a quick key to a system (or site for multi-site types), to
quickly turn that system/site on or off, press the SQK (system/site quick key)
while scanning. For two-digit SQK's press [./no] first.

If you've assigned a System Number Tag (SNT) to a system and a Channel Number
Tag (CHNT) to a channel within that system, to go directly ot that channel press
HOLD snt.chnt MENU.

Subject: [BCD396XT] Number Tags in General

Ok,
So i jumped head first into the 396xt programming using proscan. it took a
little bit to figure out but i think i'm working my personal bugs out. just so
everyone knows where i'm coming from, up to now i was using a 250D without the
P25 card. P25 is a whole other issue for me...probably a different thread. lol..
what i'm looking for is a little bit of ease of use. what is the simple way to
tune to a specific group without having to scroll through every other group and
freq to get to it. i'm guessing that's what the "quick keys" are for. i haven't
figured out how to navigate with those yet. everytime i try to put in the quick
key the scanner says it's not stored which i know it is because it shows it
after i assigned it in the software.... YES I UPLOADED IT TO THE SCANNER :-)

any help with this would be awesome. it would be cool if there was a tutorial on
navigating the "systems" in the scanner. is there one?!!?

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-18 01:54:53 UTC
From: Richard A. Victor
Topic: 1106 Message: 1151

Seems to me that your argument is much better for the situation where a particular tone is set. When the setting is "Search", not so much. :-) Nearly all of my 246T files were set to search for CTCSS/DCS tones since it was an option that didn't cause me to give up anything for the additional information and I seldom entered specific tones except to exclude an interfering station by means of the CTCSS/DCS lockout function. In transferring those same frequencies to the 396XT I may want the channel to listen for both analog and digital transmissions instead of searching for a tone and it won't do that if set to analog only. So it's not a right or wrong issue as much as a preference in that case.

Either way you or I can change the settings easily enough when the data is imported so it's not that big a deal unless the actual tone settings are lost in the import in which case I could understand that it would be a nuisance to have to reenter all of them again.

Keep in mind that we also don't know how the, as yet non-existant, USAD will handle this situation. That, too, is an assumption unless you are a beta tester or have some inside info. I know one thing for sure--if there's some aspect of USAD that we are unhappy about, it won't be nearly as easy to get it fixed as it has been with Freescan.

I do not think you can enable Icalls on the XT. They are always enabled on every system. You need the wildcard to "enable" them.

If I am wrong, please tell me how to enable Icalls on XT. I posted this on the list a few days ago and Upman wrote that they are always on now, but you do need the wildcard to actually hear them.

Subject: Re: [BCD396XT] Re: iCall Help

I think you are wrong.
If you enable iCall on a system and are in search mode the iCall will come up. When you put the wildcard into a memory channel you can be in scan mode. When the scanner goes to the memory channel that the wildcard is in you will hear all iCalls.

Keep in mind that on the XT we now have start up keys. You can use them to quickly monitor one or more systems which are assigned to the appropriate startup key. This is helpful if you have a large number of systems turned on and you want to scan just one system quickly, just turn off the radio and power back on with the appropriate startup key. Just a suggestion.

1155. Displaying TG Number

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-18 04:52:26 UTC
From: B Hall
Topic: 1155 Message: 1155

I used to have the display configured so that it displays the TGID (in decimal) along with the name of the TG. However, with FreeSCAN .8E, I seem to have wiped out that setting and I cannot get it back. In FreeSCAN, under Scanner, Setup Scanner Options... on the General tab, I have selected Mode 2 (Frequency/TGID for trunked) and when I send the configuration to the scanner, it never "sticks". It only shows the TGID name, and the frequency below. How do I configure the display options using the scanner keypad as the FreeSCAN settings don't seem to be sticking (I'm also finding that FreeSCAN .8E won't send the broadcast lockout options on the Search tab of Setup Scanner Options...). Anyone else having trouble with this?

Thanks!

> channel should be set to "analog" -- it's the only way they will
> work!

You could also argue that the CTCSS was a 'leftover' from when the channel was changed to ALL in order to hear P25 modulation that was added to it. Hence, it IS an assumption to say that the CTCSS/CDCSS setting should override the ALL setting in any file. Not all SW erases the CTCSS/CDCSS when you set the channel to ALL.

Granted, the 396T does not support the ALL setting, but other scanners do.

> Second, this appears to be a defect introduced with .8E. I've only

> All. Under .8E? Not so much.

And again, I agree that in most cases the assumption should be made that if a CTCSS/CDCSS was set, then the channel will be 'analog only'.

But, when you're talking about importing files, and a field does not exist in the file you're importing, you have to make an assumption one way or the other about which way to set it. That's not an operational truth as you are arguing, but a logical truth. What would you assume about a channel that has no CTCSS/CDCSS set? Is it "supposed" to be Analog only (if it was CSQ the person wants), Digital Only (if the person was monitoring a P25 channel, or ALL (if the person was monitoring both types)? This is an even more grey assumption, as any of these cases could be true, and the SW author has only one of three to pick from. Which way would *you* decide? Any way is an assumption.

Hey, what would we do without FreeScan?
My fingers hurt just to think about it.

On another note ProScan is great for logging and recording either on conventional channels or on Trunked talkgroups.

Between the two softwares can't think about anything more you would be able to do.

Imagine if neither of these softwares were there for us.
A big pat on the back for both developers.

Remember my specific case: UASD files for a 396T imported into FreeScan. You cannot decode P25 audio when searching for a tone in the '396T (or 'XT), so by marking it as "search" in a '396T, you've already made the decision that you want to listen only to Analog audio. Therefore, the import should flip the channel type to "Analog" for a '396XT.

In fact, this is how it seemed to work on .8D since I never had to go an touch hundreds of channels and set the flag to Analog when I imported using that version. It just worked as expected.

Man, are you guys missing the point ... or you just don't have a BCD396T.

Once again, if you set a channel to have a CTCSS or DCS tone, or set the channel to search or set a tone lockout, you have already eliminated the possibility of decoding P25 audio (directly by setting "search" and indirectly by setting a tone).

If a user didn't understand that when he did it, is the software author supposed to assume the user was mistaken? Please.

Despite the fact that there are no "All", "Analog", or "Digital" settings in the '396T, the user has made that chosen "Analog" by setting those options.

It is not unreasonable for a program to "assume" the user made the decision to use the tone if the user entered the tone. In fact, to assume the user meant to do *something else* by entering the tone would be really bad design.

And, near as I can tell, this is exactly what FreeScan .8D did. It's just a defect introduced in .8E. I'm sure the author will address it when he has time. He is, after all, doing this for fun and not $$$.

I've used ProScan for uploads and downloads. I've had no problems with this. I also import systems from RadioReference and find the ProScan interface works better than others I've tried.

Agreed!

a BIG thanks to these software producers!

Assaf, Just FYI, I just downloaded your most recent update 0.8E. The upper blue bar and the help file still indicate 0.8D.

Thanks also for the ICALL advice. I have added i0 to all of my affected groups!

To reset the display mode from the keypad,

Hold --> Function button --> 6/DISP button

That will cycle through the three modes.

Don't believe that FreeSCAN will import those files directly and don't have ProScan to look, but I will say that you could send the files to the radio and then download using your new program of choice and that should do it.

If you're moving to a new radio and still have the old one, read it with FreeSCAN and the upload to the new radio letting FreeSCAN convert it for the new radio (thinking something like going from a 396T to a 396XT - upload files wanted to the T, read with FS and then send that to the XT).

If you don't have GPS connected to your 396XT, ignore the distance settings.

If you programmed in a P25 system and you don't have a control
channel, then you need to recheck your settings.

Mot all frequencies/transmitters have exactly the same coverage for a lot of reasons. Sometimes you can hear a control channel but the voice channel is not receivable. Sometimes the voice channel can be recieved better than the control channel, too. Either can happen on the fringe.

1185. i-Call help (still)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-19 02:33:22 UTC
From: rehmj@sbcglobal.net
Topic: 1185 Message: 1185

Still not sure what all needs to be done for i-call reception.

I have a Mot P-25 system programmed. It runs great.

I ID-search the system and I ID-scan the system. Easy to switch.

HOW do I program the i-call wildcard, if needed? Does it go into the "scan" group or the "search" group. Or can it go in both?

And do I understand that "i-0" gets programmed into the spot where a TGID would be?

Sorry to keep hashing. Not new to scanning but new to this TYPE of scanning/programming.

1186. BCD396XT Software

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-19 04:00:03 UTC
From: James F. Boehner, MD
Topic: 1161 Message: 1186

Actually loaded "e" on top of "c" but had an indication that the software was "d' (?).

It was a case that I put a shortcut on the desktop when I first loaded Freescan, and I guess it pointed to the wrong updated file.

I uninstalled the older version, installed 0.8e, and all is well!

Thanks!

Subject: Re: [BCD396XT] BCD396XT Software

>>Assaf, Just FYI, I just downloaded your most recent update 0.8E. The upper blue bar and the help file still indicate 0.8D.<<

You probably need to uninstall 0.8D - the new version does not install on top of an existing installation.

You program in in one of the talkgroup slots so when you do a ID-scan if it identifies and I-Call you will hear it.

So bottom line, the closer I get to the "system" which is in the city I'll be able to pick up the cc and hear the voice? It's pretty frustrating to see the talkgrp id pop up but you dont hear anything, especially when it's on the pd's emerg channel!! lol....i digress.

Assuming it's only a coverage issue, yes.

If there is something else like a missing or incorrect fleetmap, then
you would have to fix that.

1190. RE: [BCD396XT] Number Tags in General

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-19 06:53:25 UTC
From: Dan Danz
Topic: 1134 Message: 1190

If you put all the control channels in one site, then the radio will grab the first one it finds and never look at the others (same as the 396 did).

If you put the major sites in, then you can avoid scanning the towers you're not near. You can do this with a GPS input automatically, or you can put them on different SQKs and enable/disable manually.

If you have all the sites setup, you COULD make them all the same SQK, but then the scanner would always try to scan each of the sites all the time.

To: BCD396XT@yahoogroups.com
Subject: Re: [BCD396XT] Number Tags in General

Well gee Dan, I see great minds think alike. I had an idea about laying out my system but my problem is I'm impatient. I started by putting one system in and that was Orange County (I'm a dispatcher too but for FD). I listen to our channels no matter where I am and I also have the Sherrif's groups programmed. Beyond that I programmed our medcom channels and Orlando International's freqs. I did all of this using the "import from RR" feature on Proscan....I've been spoiled. lol. You were right, I re-loaded everything for the second time today and I've only had the radio for about 3 or 4 days. The reason I did it was because I was interested to see how the "control channel only" works and so far it's just the same with half the work. I had a question about the sites. Do the individual sites have to be programmed seperately or can all the freqs for the system be put into one "site" on the scanner?

Bottom line, my goal is to have it setup to where I can easily select the "systems" I'm in the mood, or "situation" to listen to. It's looking like the programming is 95% of accomplishing that. I honestly have about 3 different systems I want to listen to but not all at the same time. I also listen to local aviation quite a bit so it seems pretty simple in the grand scheme. I need to get a grip on the "quick keys" and the different types and I think I'll be ok.

Any other info would be appreciated...don't be shy.

-THANKS!
Dan F.

Sent: Friday, April 17, 2009 6:17:11 PM
Subject: RE: [BCD396XT] Number Tags in General

You're confusing yourself when you use the generic term "Quick Keys" because there are two kinds:

System Quick Keys (SQK) 0-99 that are used to select Systems (and/or Sites within systems) and

Group Quick Keys (GQK) 0-9 (within each System) that are used to enable/disable groups of channels or talkgroups

Most of the time, you'll assign a different SQK to each system or site within a system. Sometimes, though, you might want to use the same SQK for two systems. An example might be a trunking system for the police in a town, and a conventional system with the fire channels for that same town. You might decide that you always want to listen to them both at the same time, or neither of them, but never one or the other. Then you could assign them to the same SQK and turn them on or off together.

GQK 3 for System 23 is entirely different from GQK 3 for system 46. You can make them have the same meaning if you want; for example you could always put Police channels on GQK 1, Fire on QGK 2, etc. That's the way some folks do it to make it easier to remember. But that's too inflexible for me, in a big city, where I have many different Police channels, and I may not want to listen to all of them at any given time. So I put them in different groups within the systems. There's a method to my madness, though, as you'll see below.

You asked for a sample: Here's a complicated one that should give you the big picture. It's ONE way to setup the scanner, and it works for me. YOU probably have different requirements and should design your own layout FIRST, then start programming the scanner.

Key to all of this is to think about how you want to selectively listen. Is it important to you to turn off all Fire traffic and just listen to police. Okay, now do you want to listen to all Police traffic, or just dispatch? All departments? Or maybe only one or two special ones.? Do you travel, and want to exclude radio systems in entire areas today so you're not bothered by noisy channels, but tomorrow when you're in that area, you need to listen to these same systems.

Once you've determined WHO and HOW you want to listen (or not listen), then and only then start collecting frequencies and system types, and channels/talkgroups etc. from books, or Radio Reference, or wherever you get that information for your area. Don't even worry about it until you've done the first part.

You've got a huge amount of flexibility with these radios. You probably won't get the layout right the first time. But it's important to have a plan before you start programming. (And you also have to get used to thinking of zero as 10, because in Uniden-think it comes after 9 and not before 1.)

The first thing I did was wipe out all of the factory programming. That's there to just get you "working radio out of the box". You can certainly do a lot better.

I'm a dispatcher for Maricopa County Sheriff, so guess what I listen to most ..

(I apologize for the leading .. in the following but without them, the browser would squash everything to the left and you wouldn't see the important indentation)

System 1 Maricopa County Regional trunking system

....Site 1 - Central Courts Building (SQK 1 or .01)

..Site 11 - East County Court Building (SQK 11 or .11)

..Site 12 - Gila Bend (SQK 12 or .12)

....Site 13 - White Tanks (SQK 13 or .13)

....Site 14 - Thompson Peak (SQK 14 or .14)

....Sites 15-19 (SQK 15 or .15 thru .19) are similar

....Group 1 - East Talkgroups (GQK 1)

........East Main

........East Car to Car

....Group 2 - West Talkgroups (GQK 2)

........West Main

........West Car to Car

....Group 3 - Lake Patrol (GQK 3)

........Lakes 1

........Lakes 2

....Group 4 - Info (GQK 4)

........Info

........Central

....Group 5 - East Hot (GQK 5)

........East TAC

........East Emergency

....Group 6 - West Hot (GQK 6)

........West TAC

.....West Emergency

....Groups 7-9 (GQK 7 thru GQK 9) Affliated Cities

..Group 0 - (GQK 0) - Miscellaneous (Jails, county attorney, probation etc.)

System 2 Phoenix Regional Wireless Cooperative (RWC)

....Site 2 (SQK 2 or .02) - Simulcast A

....Site 21 (SQK 21 or .21) - Simulcast C (Sky Harbor area)

....Group 1 (GQK 1) - North Hot

.....Precinct 600 Hot

.....Precinct 900 Hot

....Group 2 (GQK 2) - Central Hot

.....Precinct 500 Hot

.....Precinct 700 Hot

....Group 3 (GQK 3) - South Hot

.....Precinct 400 Hot

.....Precinct 800 Hot

....Group 4 (GQK 4) - 400 Precinct

.....400 Dispatch

.....400 Alternate

....Group 5 (GQK 5) - 500 Precinct

.....500 Dispatch

.....500 Alternate

..... etc for 6 thru 8

....Group 9 (GQK 9) - 500 Precinct

.....900 Dispatch

.....900 Alternate

....Group 0 (GQK 0) - Sky Harbor Airport

....PD airport dispatch

.....Oscar Units

.....Parking Units

System 3 (SQK 3 or .03) is Phoenix Fire, and looks very much like System 2, except it has sites 3 and 31 (SQK 3 or .03 and 31 or .31) with fire channels/talkgroups grouped by Group 1 Alarm, Group 2 Violent Incidents, Groups 3-9 Fireground channels, and group 0-Investigators, etc.

I have a second Fire System - SQK 39 - that has conventional frequencies that they are still using, and it has the same breakdown of groups, plus it has the "other" fire department in the area, Rural Metro, in group 0. I could've reused SQK 3 for this system instead of 39 if I always wanted them both on or off together, but while they're still testing on System 3, I wanted to be able to turn it off independently. Maybe a few years from now, I'll put them both on 3.

System 38 (SQK 38 or .38) is all the Tonto Forest and other Wildfire frequencies for areas near me. The GQK 1 thru 0 groups within this system are used to segregate fire-fighting teams and areas.

System 4 (SQK 4 or .04) is AZ Department of public Safety (Conventional system)

....Group 1 - Metro East Frequencies

....Group 2 - Metro Central Frequencies

....Group 3 - Metro West Frequencies

System 41 (SQK 41) on the other hand, is a different layout of all of the DPS frequencies that I use when I traveling in Arizona.

..Group 1 - District 1

..Group 2 - District 2

....Group 3 thru 0.. Etc.

System 5 is Mesa's part of the regional wireless system and looks very much like System 2, except the precincts are Mesa and Gilbert Police and their respective Fire areas and follow their numbering system

System 6 is Scottsdale Police (SQK 6) (who use the Maricopa county radio system - system 1)

....Site 6 (SQK 6) is Thompson Peak (same as site .14 for frequencies)

....Group 1 is Scottsdale PD North

....Group 2 is Scottsdale PD South

....Group 3 is Scottsdale PD Info

....Group 4 is Scottsdale PD Detectives

.... . etc.

Why did I put Scottsdale as a separate system instead of putting their talkgroups on System 1? Because there were too many talkgroups when you combine them that way, and because I don't usually listen to Scottsdale. So I can use

SQK 6 or .06 to enable/disable Scottsdale, independently of system 1.

There is a hidden cost, though. When I'm scanning the tower for Scottsdale (SQK 6), I can only get Scottsdale talk groups, and when I'm scanning that same tower as part of SQK .14, I can only get Maricopa county talk groups and not the Scottsdale talk groups.

Decisions, decisions !....

Systems 61 thru 69 are conventional frequency systems that enable/disable police and fire in counties that surround Phoenix. If I'm not in a particular area, I don't enable that area.

Systems 71 thru 70 (SQK 71 or .71 thru SQK 70 or .70) are reserved by me for temporary systems that I insert when I'm traveling; so if I'm going from Arizona thru NM, TX, OK, and KS, then I would number the systems 71 for NM, 72 for TX, 73 for OK, and 74 thru 79 for KS. That way, as I drive thru each state, I can enable that state and disable it when I get to the next.

.

System 81 is Buckeye Police

....Site 81 (SQK 81) is main (only) Buckeye PD site

....Group 1 (GQK 1) PD Dispatch

.....PD Dispatch

.....PD Alternate

....Group 2 (GQK 2) is PD Talk

.....PD Info

.....PD Car to Car

System 91 is Sky Harbor Air Frequencies

....Group 1 - Tower

....Group 2 - Approach

....Group 3 - Departure

....Group 0 - Emergency frequencies

System 92 is Luke AFB aircraft

....Groups 1 thru 9 for the different squadron frequencies

....Group 0 - Emegency

System 99 is MURS/GMRS/Business

....Group 1 for FRS

....Group 2 for Itinerant Business Frequencies

....Group 0 for Emegency Frequencies

Some of the rationale:

. I arrange sites and groups so I can include or exclude:

o Dispatcher channels

o Chat channels

o Boring (info/wants/ warrant checks, etc.) channels

o Training / Jail / Admin channels

o Law Enforcement / Fire / Medical / Business / Aircraft

. I also arrange sites and groups so I can include or exclude areas

o If I'm in Phoenix on the northeast side, I don't want to listen to South Hot, or the 400 or 800 Precincts, so I can turn them off with GQK's 3,4, and 8.

o Likewise, if I'm on the Northeast side, there's not much sense have the Sky Harbor airport site turned on at all, since I won't receive it reliably, so I can turn it on/off with SQK 21

. If I do or don't want to listen to Maricopa County (any site), I know that all of the sites are in the 1, and 11 thru 10 series, so it's simple to check if I've got them enabled

o Pressing .0 will show me whether .01 is enabled or not

o Pressing .1 will shoe me which of the .11 thru .10 sites are enabled.

. Similary if I want to stop listen to Phoenix Law Enforcement, all those sites and systems are 2 and the 21 thru 20 series

o Pressing .0 shows me wether .02 is enabled or not

o Pressing .2 shows me which of the .21 thru .20 SQK's are enabled.

. Using the Group Quick Keys for any of the systems that I'm scanning allows me to shut off traffic I'm not interested in, or areas that I'm not interested in for that particular system.

. Some of the numbers I picked for some things are meaningful in context

o For Phoenix RWC, GQK 4 is 400 precinct, GQK 5 is 500 Precinct, etc.

o Phoenix Fire Fireground channels are numbered and I use similar numbers for my groups.

o DPS districts are numbered and if I'm traveling around the state, I can enable/disable the districts in System 41 appropriately using Group Quick Keys that are the same as the district numbers.

I know I threw a lot at you - but if you don't plan for the big picture now, you'll be redoing your layout repeatedly.

And finally, with the XT, I can finally lay out my systems/sites/ groups/channels
exactly the same on the handheld as I do for my mobile 996T. Thank you Uniden !

GOT IT! Amidst that confusion I totally got it. It all makes sense now. Now as far as the "Quick Keys" go, they are only 0-9 and can ONLY be utilized in scan mode, correct? An example would totally paint the picture....if you don't mind. :-)

Your title says "Number Tags" but your message says "Quick Keys." Those are different things.

If you've assigned a quick key to a system (or site for multi-site types), to quickly turn that system/site on or off, press the SQK (system/site quick key) while scanning. For two-digit SQK's press [./no] first.

If you've assigned a System Number Tag (SNT) to a system and a Channel Number Tag (CHNT) to a channel within that system, to go directly ot that channel press HOLD snt.chnt MENU.

Subject: [BCD396XT] Number Tags in General

Ok,
So i jumped head first into the 396xt programming using proscan. it took a

little bit to figure out but i think i'm working my personal bugs out. just so everyone knows where i'm coming from, up to now i was using a 250D without the P25 card. P25 is a whole other issue for me...probably a different thread. lol.. what i'm looking for is a little bit of ease of use. what is the simple way to tune to a specific group without having to scroll through every other group and freq to get to it. i'm guessing that's what the "quick keys" are for. i haven't figured out how to navigate with those yet. everytime i try to put in the quick key the scanner says it's not stored which i know it is because it shows it after i assigned it in the software.... YES I UPLOADED IT TO THE SCANNER :-)

any help with this would be awesome. it would be cool if there was a tutorial on navigating the "systems" in the scanner. is there one?!!?

1191. RE: [BCD396XT] Number Tags in General

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-19 07:15:48 UTC
From: Dan Danz
Topic: 1134 Message: 1191

Well, I was gonna preach about that, but my sermon was getting way too long as it was.

I always go one step further . I put the SQK number at the front of the system name and the system file for UASD . Makes them real easy to scroll thru.

So, if [SQ] is the 2-digit SQK number, and [GQ] is the single digit Group number, I lay things out like this:

[CN] is the channel number as the agency calls it.

[SQ]-SYSTEM-NAME (no spaces because it's also a file name)

[SQ] Site [TowerID]

[GK] Group name 1

[CN] First channel

[CN] Second Channel

. etc.

So, take my programming for Maricopa

The SQK is 01, so the file name is 01-MARICOPA

The Central Courts site is tower number 009

So the first site is name "01-MC-CCB 009" -- there's enough spaces to right justify the 009.

Other sites are name "11-MC-SEC 010"

Or "12-MC-DUR 103", etc.

Then the groups are

1 EAST

.. 3A East Main

.. 3B East C/C

2 WEST

.. 1A West

.. 1B West C/C

Now when the scanner stops, I have the top line alternating between

14-MC-ORD 007

And

1 EAST

And the next line shows

3A East Main

Because I built 14 into the site name, I can easily turn off SQK 14 if I don't want that site any more. The tower number in the site name allows me to correlate my programming with the lists on Radio Reference.

Similarly, the GQK is 1, so I can drop that group real quick if it's annoying traffic.

And if somebody says "Goto 3B", I don't have to look it up . I can HOLD and scroll thru my talkgroups and find the one they are talking about.

I haven't gotten 'round to using the direct channel numbers yet . but I suspect I'll work them into this scheme somehow.

Try making the SQK a part of the system name. That might help.

If you create a new conventional system and site them enter all possible control channels as NFM, the step thru them in mamual.
If you can hear a control channel on one og the freqs, and it is a good signal level, then it should work. If no control channel is heard then it can't work.

Actually loaded "e" on top of "c" but had an indication that the software

was "d' (?).

It was a case that I put a shortcut on the desktop when I first loaded

Freescan, and I guess it pointed to the wrong updated file.

I uninstalled the older version, installed 0.8e, and all is well!

Thanks!

blue bar and the help file still indicate 0.8D.<<

You probably need to uninstall 0.8D - the new version does not install on

top of an existing installation.

1194. GPS Feature

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-19 06:10:01 UTC
From: tuckyguy
Topic: 1194 Message: 1194

I am a fairly inexperienced user compared to the experts I see here. I have seen no discussion in regards to using the GPS.
I am excited to have the BCD396XT, and know I have a lot to learn. I have had pretty good success programming it using a few different applications I downloaded. I believe I have even been able to determine GPS coordinates and have them entered. I am waiting for a compatible GPS device to become available soon. I have a DeLorme Earthmate GPS LT-20, but have had no success getting it to work with this scanner. It's a few years old, but I thought what the heck and try it.
What GPS receivers are compatible with the BCD396XT?
I am interested in hearing from those more familiar in this area who may be able to throw in their 2 cents with hints, tips, etc.

Thanks,
tuckyguy

Keep in mind the scanner will quickly pass through any sites not in range, so it's not a bad thing to have all the sites active (unless you're talking about dozens of sites or more.

1196. Site questions

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-19 14:55:30 UTC
From: Peter Laws
Topic: 1196 Message: 1196

See if I have this right: A (trunked) System has one or more Sites.
But at least in FreeScan, if not in the radio itself, I can only add
an alpha tag to the sites, not the system. Is that correct?

Another question about sites. If I don't have lat/lon info entered
for a site and don't have a GPS connected, how does the radio deal
with multiple Sites?

From direct observation, it appears to scan through each site that has
a control channel present, but is there more to it than that?

I believe that I remember seeing that the logging has been disabled in the newest version (he was having some issues and decided on a brief "vacation" for it <g>). So don't think it is anything you are doing incorrectly. You might want to check www.scannow.org as I believe that's where I saw the information (and it's the "home" of FreeSCAN).

Good point - -- EXCEPT that if you happened to land on a distant site and could receive the control channel, but then have trouble getting good reception on its voice channels.

Fortunately for me, the Maricopa system has 3 main sites where the majority of the Law Enforcement talk groups are forced, and the other sites are fill-in sites that only carry traffic when a unit affiliates with them. So I really don't want one of those unless I'm in the area.

But, YMMV --- maybe Joe's suggestion would make it easier for folks just starting out, until you learn which towers you'd really like to have in a separate site so you could enable/disable them.

I'm not saying my way is the only way to go - on the contrary, I say pick what's best for YOU. I just wanted to answer the guy who wanted a sample, and I thought I'd show a complicated one instead of a simple one.

Topic: 1203 Message: 1203

Anybody in Ohio willing to send me your Freescan MARCS files for the XT.

I did not see one in the FILES section.

I download the system from RR, but was just curious how the folks over in Ohio have their units setup

Please send direct to me.

Thanks in advance.

1207. Re: [BCD396XT] Re: No Voice on P25

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-20 03:19:09 UTC
From: JAN FINE
Topic: 1181 Message: 1207

I think I read somewhere that they were going encrypted.
This means you can no longer pick them up.
When I was up there a few months ago I could still hear Orange County.

Subject: [BCD396XT] Re: No Voice on P25

I appreciate all the advice. I tested some theories. I was deep in the Digital System's area today (Greater Orlando's P25 system if anyone's interested in looking at it for me)and I got nothing. My info was imported from the RR website using the Proscan software and I double checked all the info with another website. The control channels are being picked up along with the tlkgrp and I'm just not getting any voice. I'm pretty damn confused. lol. I'm pretty sure I did everything right after checking the manual. help please!

[Non-text portions of this message have been removed]

1208. Re: [BCD396XT] Re: No Voice on P25

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-20 03:21:12 UTC
From: Richard A. Victor
Topic: 1181 Message: 1208

The note on RR on that system indicates that:

"As of April 19, 2008, at 0300 Hrs, ALL OCPD talkgroups are
encrypted. Also, Orlando Fire Dept. is not using encryption, however,
for any Fire/Multiple Unit responses they are using Orange County
Fire (1F36) Mutual Aid 6."

Is it possible that you are trying to listen to a talkgroup that is
encrypted? I believe that would result in the scanner stopping on
the talkgroup and producing no audio.

Dick

Do you realize all of that system's PD are encrypted and hence the 396xt
will show the tg, stop momentarily then resume?

Did you copy any FD?

From: Dan Faenza
Topic: 1181 Message: 1210

Yeah, I feel like an ass now. It's doing exactly what you're saying. I have the FD groups in there but again, no voice. I'm going through the city to get to work tomorrow so I'll check it out then.

1212. will case fit from 396t

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-20 04:04:56 UTC
From: Mr. L. Harris
Topic: 1212 Message: 1212

Hi all im seriously thinking of selling my bc396t i love it ,, but i dont want it to turn into the bc235 as it turned into when the bc245 came out

i want to know if the heavy duty swivel clip leather radio holster willl fit the bc 396xt does any one know?

where is a cool place to buy the 396xt ?

Make sure that you've turned off the functions that interrupt a
transmission to check for something else such as priority and close call.

Try entering a system that you know works. I am sure there are many in your area. Maybe just analog but by entering it, it will prove your scanner is working correctly. Just a thought.

1220. Re: [BCD396XT] i-Call help (still)

Yahoo group: BCD396XT (2008 — 2010)
Date: 2009-04-20 13:33:13 UTC
From: SRehm24416@aol.com
Topic: 1185 Message: 1220

Thanks. Part of my problem is separating the old city system?from the new city system. Same city, same freqs, same MOT radios (per se), same dist channel set up. I hope you get the idea. I found out that the i-calls are only used on the old system. Would NEVER have figured that out unless for the smart people on this site. Guess we are all here to help everyone.

In ID Search iCall is automatic, no "wildcard" is needed.

More than that. Except for the speaker grille being more "open",
there are no apparent differences in the case between the 'T and 'XT.

The only other physical difference I note is that the knob on the new
